> R75 in terms of interface, if not the same.

The minus is that it takes a 12 volt supply @ 30 or so amps. A smaller supply could be used if transmitting was not anticipated but, in tthat case, why not just get a SW receiver only? The external supply is bulky and the wires are kind of ungainly but that is what needs to be put up with for transmitting.

Alsom when figuring the "real" price of a IC-718, remember to add the price of the power supply. You might find that something on the order of an Icom R75 or a Yaesu FRG-100 would end up cheaper (and equal quality for receiving) when the power supply is figured it, The receivers just plug into the wall...

3804. Building a 'simple' Attic Loop Antenna = Not So Simple !

Newsgroup: rec.radio.shortwave
Date: 2005-11-22 07:13:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1132643587.010842.323040@o13g2000cwo.googlegroups.com>
Source record: 50655

Harold,

Building a 'simple' Attic Loop Antenna = Not So Simple !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6653

ATTIC "CONICAL" LOOP ANTENNA :
The general ideas in the Drawing of the Attic Conical Loop
Antenna is to try an approximate a single turn SkyWire Loop
Antenna that is located OutSide. Not a Great SkyLoop design
but better than most for Wide Band Use considering that it
is after all "stuck-in-an-attic'.

Caution - Winding the Loops too close together can effectly
make them one loop or a very narrowly tuned loop.

Tip - The Pictured Attic Conical Loop Antenna can be
Lengthen and Shorten at the Feed-Point Corner by Tapping
Each of the Corner Turns there.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/

SAFETY - The Advantage of using TV type Stand-Offs on the
UnderSide of the Roof's Surface Keeps them away from your
Feet and Body so that you are less likely to Trip-and-Fall
and Injure yourself while Walking-About the Attic.

3 1/2" Wood Screw Stand-Offs with Insulators [4-Pack]
RadioShack Catalog # 15-853
http://www.radioshack.com/product/index.jsp?productId=2104003

BUILDING THE RIGGING BOARDS FOR THE LOOP ANTENNA ELEMENT :
All-That-Being-Said :
* You can buy two pieces of 1"x4"x8' Wood Boards.
* Place-Clamp the Two Boards Together and Measure of 46"
* Draw a 45* Line from the 46" Mark across the 4" Flat
Side of the Boards. From the other end of the Broads to
the other end of the 46" 45* Line should also Measure
about 46". Saw the Boards in Two (4 pieces) Un-Clamp
the Boards.
* Now take all Four (4) pieces with the Square-Flat-Ends
and 45*-Sloping-Ends Matching-Up and Clamp them together
laying Horizontal to work on them. The Short Edge of the
Broads should be Up with the 45* Angle Surface Sloping Down.
* You are now going to Cut a Series of 1/2" to 3/4" Cuts
for the Wire Antenna Elements to be Held-in. These can be
simple Vertical Down Cut or a 45* Cut towards the Square
Flat End. First Measure in 2" from the Square-Flat-End

and make your First Cut. The next Series of Cuts is based
on what you want you Wire Spacing to be or the Number of
Turns you are trying to get into the available space.

Three Inch (3") Spacing with 13 Turns Possible
Cuts = 2" 5" 8" 11" 14" 17" 20" 23" 26" 29" 32" 35" 38"
- Note - Can be used for Six Inch (6") Spacing with 7 Turns
using every Second Cut to Wrap the Wire Antenna Element.
- Note - Can be used for Nine Inch (9") Spacing with 5 Turns
using every Third Cut to Wrap the Wire Antenna Element.
- Note - Can be used for Twelve Inch (12") Spacing with
4 Turns using every Fourth Cut to Wrap the Wire Antenna Element.

Four Inch (4") Spacing with 10 Turns Possible
Cuts = 2" 6" 10" 14" 18" 22" 26" 30" 34" 38"
- Note - Can be used for Eight Inch (8") Spacing with 5 Turns
using every Second Cut to Wrap the Wire Antenna Element.
- Note - Can be used for Twelve Inch (12") Spacing with
4 Turns using every Third Cut to Wrap the Wire Antenna Element.

Five Inch (5") Spacing with 8 Turns Possible
Cuts = 2" 7" 12" 17" 22" 27" 32" 37"
- Note - Can be used for Ten Inch (10") Spacing with 4 Turns
using every Second Cut to Wrap the Wire Antenna Element.

* * * My Choice for Spacing and Turns * * *
Twelve Inch (12") Spacing with 4 Turns Possible
Cuts = 2" 14" 26" 38"

ATTIC SIZE = LOOP SIZE & WORKING HEIGHT :
With a Waist to Shoulder Working Heigth in an Attic and
an Average Size 25' by 40' Attic the the Loop Size would
be about 15' by 30' or about 90 Feet around one time.
With Six Inch (6") Spacing and up to 7 Turns Possible
- Loop # 1 = 90 Feet
- - Loop # 2 = 180 Feet
- - - Loop # 3 = 270 Feet
- - - - Loop # 4 = 360 Feet

Or you may want to try Nine Inch (9") Spacing with
5 Turns Possible
Cuts = 2" 11" 20" 29' 38"
- Loop # 1 = 90 Feet
- - Loop # 2 = 180 Feet
- - - Loop # 3 = 270 Feet
- - - - Loop # 4 = 360 Feet
- - - - - Loop # 5 = 450 Feet

These both have you using up almost a Full Spool of #14 AWG
Stranded Insulated Wire (made with 19 Strands) and IMHO
that is enough Wire in the Attic to hear anything that
you can hear from there.

Now that you have made your "Spacing Cuts" keep all the
Boards Clamped Together and Drill a 1/2" Hole Center 2"
back from the Square-Flat-End. More about this latter.

Un-Clamp the Boards and I Recommend that you Paint them
with some White Paint so that they are Easier to see in
the Attic. Also if you want to after the Boards are Dry
from Painting; you can Lay the Boards Side-by-Side and
Number the "Spacing Cuts" so that you will know where
you are at with each Wrapping of the Turns. - It Helps.

MOUNTING THE RIGGING BOARDS :
The Four Square-Rectangular Rigging Boards at Waist to
Shoulder Height position the Rigging Boards; this is about
3-5 feet above the Attic Floor and all the Electrical Wiring
and most of the Things up there. Mount the Four Boards in
the Attic on Slanted Rafter that make-up the Under-Side of
the Roof. The Square-Flat-Ends are Facing-Out and the
45*-Sloping-Ends up along-side the Rafters; with the points
down. Nail or Screw (3-Each) the Boards in place so that
the 1"-Top-Edge with the Cuts in it is Facing "Up" and is Level.

Attach a 5-8 Foot Piece of Nylon-Poly Rope to the 1/2 Hole
at the Square-Flat-End of the Rigging Boards. Tie-it-Off
and let it hang for now.

RIGGING - THE WIRE ANTENNA ELEMENT :
Start from the First Cut nearest the Rafters and your
Feed Point Corner Wrap the First Turn. When you get back
to the Starting Point place the Wire in the Next Outer Cut
that meets you spacing requirements. Continue this Process
until you are Run Out of Wire or Cuts when you come by the
Starting Point. Now place a Nail or Hook directly above
the Square-Flat-Ends of the Rigging Boards to provide some
Upper-Support-Points for the Extended Rigging Boards.
Next take the Nylon-Poly Ropes and Tie them to the
Upper-Support-Points and Secure them so that Hold-Up
the Outer Tips of the Rigging Boards.

FEED-IN-LINE AND BALUN :
You can use a Balun between the Loop Antenna Element and
the Coax Cable or not; the Choice is yours. If you do
choose to use a Balun; then a 1:1 is usually used if this
is a Transmitting Loop Antenna; and a 4:1 is usually used
if this is a Receive Only Loop Antenna.

GROUNDING :
The Shack Ground is your System Ground and the Outer
Shield of the Coax Cable is the Ground Path from your
Radios and Shack's Equipment up to the Attic.
A separate Ground Wire can be used from the Shack up
into the Attic if you wish or use RG6 type 75 Ohm Coax
Cable with a Messenger Wire as an extra Ground Wire

to and from the Attic and Shack.

Good Luck with your Attic Loop Antenna Project.

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6645
= = = "hgxrp" <hgxrp@y...> wrote:

I want to construct a loop antenna in my attic, with
multiple turns of wire (similar to the conical loop
shown in the group's home page).

I want to have all of the wires on the same plane,
rather than in a conical configuaration, as this would
enable me to easily lengthen it if necessary.

This would be for 'receive' only. I am interested in
HF, MF, and LF, and 4 turns around my attic would give
me a length of about 480 feet.

Does anyone see any problem with the 'level' configuration?

Also, is there an optimum length to cover these frequencies,
or is more length better?

Thanks for your input.

I'm fortunate enough (!) to be able to receive it on MW, and enjoyed the coverage for the whole weekend. It was an excellent test series. (We Won!) The commentators are so funny, but if you aren't a cricket fan, it does tend to go on a bit.

Brad.

3814. Kchibo 979 - any thoughts?

Newsgroup: rec.radio.shortwave

Howdy!

I like the idea of listening to broadcasts from around the world, and would like to give SW listening a try. Don't want to spend a lot of money unless I know I'm gonna like it, so initially looking to get in cheap. If I find SW is kinda good, then I'll splash out for something more serious.

Stumbled across the Kchibo 979 on ebay. Looks alright to me, but just wondering if anyone has any thoughts as to whether or not this will suit my purpose?

Or maybe someone might have a thought to some other suitable (and suitably cheap!) models?

Oh, I'm from Toowoomba, Queensland, Australia - if my location is a factor....

Brad - Ah... That is the Will of Allah !

Typical Democrat Party of the USA canned
Liberal Propaganda Reply without really
thinking of the import of what you are saying.

Brad - There 'you' go again trying to Equate
the Intentional 9/11 Terrorist Murders : To the
accidental killings of Civilians during a War
or time of Civilian Insurgency. How many
of the Dead did the USA kill by accident and
how many were Murdered-with-Intent by the
Islam-O-Fascist ?

Think About It Brad !
* The USA does NOT go about Planning to
Kill Innocent Civilians.
* The Islam-O-Fascist do go about Planning
to Murder Innocent Civilians and They Attack
Schools, Mosques, Hotels, Markets and
other Public Places where civilians gather.

You Democrats and 'your' Liberal Logic [.]

God {Allah} Bless America - Amen ~ RHF

30,000 jobs lost yesterday (27,000 in USA + 3,000 in Canada) because nobody wants to buy GM SUV gas-guzzlers. Say, didn't Bandar Bush promise cuzzin Georgey he'd keep gasoline prices cheap? Oh yeah, forgot, that offer expired and turned into a pumpkin after November 2004, and say, didn't Chevron and those other oil criminals look good lying about all those profits they didn't make and those meetings with Dick Cheney they supposedly never kept?

The over exuberance of the color commentator was even reported on the RA
news. Very amusing!

Oh yeah, congratulations on the win and I wish Australia continued good
luck in the games.

RA was pretty good up to about 18:15 UTC on 11880 this morning. Earlier
9580 was doing better than 9710.

NZ was also better than past days on 11980 where earlier 9870 was not as
strong but had OK signal levels.

Something similar to that was done in pre PWBR days. It was called Radio Database International, the predecessor to PWBR.

That was 20 years or so ago.

AOR is still selling the 7030+ in the USA (and elsewhere) so I'm
surprised they don't have an ad in Passport. Maybe the Universal ads
were enough exposure for them.

> I am glad that Eton sees fit to advertise in Passport but I too wish

I also find the equipment reviews valuable. I think most people would be
of the same opinion. Since they cover the spectrum of equipment people
can read through that section and get a sense of what they want to buy
and so attain a level of performance.

< SNIP >

Basically with single wire antennas you need to do two things.
1. Provide a ground or counterpoise element.
2. Block the coax shield from behaving as an RF return.

You have to do both so the coax shield does not become a RF return for the antenna or power line noise through the radio will raise the receiving noise floor.

Using an outdoor ground rod or laying a wire under a random wire as a minimum for a RF antenna return. The BALUN will help match the wire impedance to the coax and provide some isolation on the shield depending on construction. You can always add another RF choke on the shield some distance from the BALUN or transformer in order to further isolate the coax shield from the antenna system.

Signals from Europe and the middle east are going to be somewhat weaker
for you so a cheap portable may not work out all that great but you can
certainly listen to the fairly strong Asian / Pacific signals such as
China, Taiwan, Japan and NZ. String out 10 to 30 feet of wire off the
ground and connect it to the antenna for a little more signal.

Over the years, I, too, have generally found PWBR's equipment reviews
to be quite useful. I've made some fairly decent purchases based on
the insight provided by Passport reviews.

As for the Eton, the ad saturation in PWBR seems hardly surprising,
given the degree to which this company shells out overall in
advertising. It seems like I'm regularly coming across their full page
ads in a variety of periodicals: Foreign Affairs, Smithsonian,
Atlantic Monthly, etc.

Congress is littered with false patriots, Republican and Democrat alike, who avoided military service.

And the biggest warmonger of them all, George W. Bush, needed daddy's connections to ride out the war at home in the safety of the Texas Air National Guard and couldn't even complete that service.

But Cheney's hypocrisy goes even further because his tirade on Monday was aimed primarily at Congressman John Murtha, the Pennsylvania Democrat who did serve his country, spending 37 years in the Marines before retiring as a colonel from the reserves and earning a Bronze Star and two Purple Hearts in Vietnam.

Murtha, one of the most hawkish Democrats in Congress, has -- like so many other Americans -- realized he was had by the many deceptions of the Bush administration leading up to the invasion of Iraq and has called for immediate withdrawal of our troops from the debacle that has cost more than 2,000 Americans, and countless Iraqi civilians, their lives.

Murtha calls the Iraq war "a flawed policy wrapped in illusion. The future of our country is at risk. We can not continue on the present course. It is evident that continued military action in Iraq is not in the best interest of the United States of America, the Iraqi people or the Persian Gulf Region."

Strong words from someone who voted to give Bush the authority to invade Iraq but words that come from someone who understands war a hell of a lot better than the cowards in the White House:

Strong words from someone who has been there and faced death for his country -- something that a draft dodger like Dick Cheney can never, ever understand.

It's bad enough when Bush uses Veterans Day, a holiday where we are supposed to honor those who serve our country, to spread his Iraq invasion propaganda and criticize those who dare question his failed policies.

As Americans we have the freedom to agree or disagree with war but it is our duty to serve her when she calls.

Draft dodgers are the worst kind of traitors to our country.

They avoided the call and are nothing but despicable.

Dick Cheney is a coward and a liar who represents an administration run by crooks and frauds.

When I see someone like that criticizing someone who served their country in war, someone twice wounded on the field of battle, I consider the source.

And, in this case, the source is nothing more than white, lying, draft-dodging trash.

To use one of your own favorite phrases, Mr. Vice President, we suggest you just "fuck off."

http://www.capitolhillblue.com/artman/publish/article_7679.shtml

A gutless, draft-dodging coward named Dick Cheney

By DOUG THOMPSON

Nov 22, 2005

The last thing we need in the increasingly bitter Iraq debate is a gutless, draft-dodging coward like Dick Cheney criticizing those who did serve their country.

The Vice President, who used multiple deferments to avoid serving his country during the Vietnam conflict, jumped into the fray big time last week and again on Monday with an acrid broadside against those who properly question the President's motives for dragging the country into the bloody dead-end called Iraq.

"This is revisionism of the most corrupt and shameless variety," Cheney said yesterday.

"It has no place anywhere in American politics."

Sorry Dickie boy, but it is you and your cronies at 1600 Pennsylvania Avenue who have "no place anywhere in American politics."

It is hypocrites like you, you shameless, cowardly son-of-a-bitch, who should be led from the White House in chains and locked away in some hellhole to rot for eternity.

American politics is cursed with chicken hawk politicians who do everything in their power to avoid serving their country and then vote to send other Americans to fight and die for their questionable wars.

White House Flip-Flops on Murtha.

First, Murtha was taking a "baffling" position only accepted by "the extreme liberal wing."

White House Press Secretary Scott McClellan, 11/18/05:
http://www.whitehouse.gov/news/releases/2005/11/20051118.html

[I]t is baffling that he is endorsing the policy positions of Michael Moore and the extreme liberal wing of the Democratic party.

The eve of an historic democratic election in Iraq is not the time to surrender to the terrorists.

After seeing his statement, we remain baffled -- nowhere does he explain how retreating from Iraq makes America safer.

Now, he's taking a "clear stand" in a "legitimate discussion."

Vice President Cheney, 11/21/05:

Recently my friend Jack Murtha called for a complete withdraw of our troops in Iraq.

I disagree with Jack and believe his proposal would not serve the best interest of this nation.

He's a good man, a marine, a patriot and he's taking a clear stand in an entirely legitimate discussion.

Sounds to me like the Repugnants ain't talkin' to each other. It's chaos.

Dick Cheney: War Profiteer

by Tom Turnipseed

November 20, 2005

Questions persist about Vice-President Cheney's role in the ongoing investigation and scandal swirling about the White House.

His chief of staff and confidante Lewis "Scooter" Libby has been indicted for perjury and obstruction of justice.

Let's take a look at some personal incentives for Cheney's selling war to our country.

Cheney has pursued a political and corporate career to make himself very rich and powerful.

He is the personification of a war profiteer who slid through the revolving door connecting the public and private sectors of the defense establishment on two occasions in a career that has served his relentless quest for power and profits.

As Defense Secretary, Mr. Cheney commissioned a study for the U.S. Department of Defense by Brown and Root Services (now Kellogg, Brown and Root), a wholly owned subsidiary of Halliburton.

The study recommended that private firms like Halliburton should take over logistical support programs for U.S. military operations around the world.

Just two years after he was Secretary of Defense, Cheney stepped through the revolving door linking the Department of Defense with defense contractors and became CEO of Halliburton.

Halliburton was the principal beneficiary of Cheney's privatization efforts for our military's logistical support and Cheney was paid $44 million for five year's work with them before he slipped back through the revolving door of war profiteering to become Vice-President of the United States.

When asked about the money he received from Halliburton, Cheney said.

"I tell you that the government had absolutely nothing to do with it."

The Bush administration has dished out lucrative reconstruction contracts in Iraq to favored U.S. based corporations including

Halliburton and denied contracts to many Iraqi and foreign based companies.

To the conquerors go the spoils was the message on December 11, 2003 when Bush said, "The taxpayers understand why it makes sense for countries that risk lives to participate in the contracts in Iraq, It's very simple. Our people risk their lives, friendly coalition folks risk their lives, and therefore the contracting is going to reflect that."

Bush's statement is a stunning admission of how much corrupt corporations control our foreign policy.

Under Cheney's leadership Halliburton out did Enron in using offshore subsidiaries as tax shelters to hide profits to bilk U.S. taxpayers.

Halliburton also utilized off-shore subsidiaries to contract for services and sell banned equipment to rogue states like Iran, Iraq and Libya.

This would be illegal if done directly by Halliburton.

At last count Halliburton had 58 offshore subsidiaries in Caribbean tax havens.

With Cheney at the helm Halliburton's tax payments to the U.S. went from $302 million in 1998 to zero in 1999, when they also received a refund of $85 million from the Internal Revenue Service.

During Cheney's tenure as CEO from 1995 to 2000, Halliburton Products and Services set up shop in Iran.

The Halliburton subsidiary does approximately $40 million a year worth of oil field service work for the Iranian government.

60 Minutes correspondent Lesley Stahl visited the subsidiary in the Cayman Islands and found that it had no office and no employees.

The mailing address was a local bank with which the subsidiary is registered.

Stahl was met there by the bank's manager who informed her that all mail to the subsidiary is forwarded to Halliburton headquarters in Houston.

Halliburton had created the subsidiary to allow itself to do illegal business with a rogue state and to skip out on its taxes in the process.

With Iran's president vowing to destroy Israel and being accused by the Bush administration of harboring and aiding al-Qaeda operatives, Cheney's company is doing business with Iran through a subsidiary and dodging its tax obligations to the U.S.

Halliburton has been more closely associated with the invasion of Iraq than any other corporation.

Before the Iraq War began, it was 19th on the U.S. Army's list of top contractors and zoomed to number 1 in 2003.

In 2003 Halliburton made $4.2 billion from the U.S. government. Cheney stated he had, "severed all my ties with the company, gotten rid of all my financial interest."

Sen. Frank Lautenberg (D-NJ) recently asserted that Cheney's stock options which were worth $241,498 a year ago, are now valued at more than $8 million-- for an increase of 3,281%.

Cheney has pledged to give the proceeds to charity. Cheney continues to received a deferred salary from the company.

He was paid $205,298 in 2001; $162,392 in 2002; $178,437 in 2003; and $194,852 in 2004.

The Congressional Research Service has concluded that holding stock options while in elective office does constitute a "financial interest" whether or not the holder of the options donates the proceeds to charities, and deferred compensation is also a financial interest.

Calling on Cheney to sever his financial ties to Halliburton, Lautenberg points out that the company has already raked in more than $10 billion for work in Iraq, and was handed some of the first Katrina contracts.

The company has been criticized by auditors for its handling of no-bid contacts in Iraq, and there have been numerous allegations of over charging for services.

Auditors found the firm marked up meal prices for troops and inflated gas prices in a deal with a Kuwaiti supplier.

The company also built the American prison at Guantanamo Bay. Lautenberg said, "It is unseemly for the Vice President to continue to benefit from this company at the same time his Administration funnels billions of dollars to it."

Cheney's war profiteering requires redress and justice.

Source record: 50907

For One and All,

Is anyone using a Advanced Receiver Research (AR2)
High Performance "Receive Only" Broadband Pre-Amplifier ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6654

Features:
* Low Noise Figure
* High Immunity to Overload
* Completely Shielded
* Suitable for mast/tower mounting
* Small Size
* Rugged low profile custom enclosure

Claim is that these Broadband Pre-Amplifiers use a low noise
figure, heavy-duty bipolar transistor in a multiple feedback
circuit to obtain essentially flat performance characteristics
across the frequency range.

AR2 => http://www.advancedreceiver.com/page46.html
http://www.advancedreceiver.com/page2.html
http://www.advancedreceiver.com/page5.html
http://www.advancedreceiver.com/page12.html

Are you using the Pre-Amplifier In-Doors in the Shack ?

Or - OutSide the House at/near the Antenna to Coax Cable
Feed-in-Line junction.

For One and All,

For Shortwave Listening (SWL) here is a "Simpler" Horizontal Loop
Antenna in the Attic using common TV type Parts.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6656

* 300 Ohm Twin Lead (100 Feet) Antenna Element
[Connected in Series for a Double Loop of 200 Feet.]

* TV 300 Ohm to 75 Ohm Balun (1) Rated down to 5 MHz

* RG6 TV type Coax Cable (100 Feet) Feed-in-Line

* TV type Screw-In Insualted Stand-Offs (4-10)

Source record: 50925

East Asia allies doubt U.S. could win war with China

The overwhelming assessment by Asian officials, diplomats and analysts is that the U.S. military simply cannot defeat China. It has been an assessment relayed to U.S. government officials over the past few months by countries such as Australia, Japan and South Korea. This comes as President Bush wraps up a visit to Asia, in which he sought to strengthen U.S. ties with key allies in the region.

Most Asian officials have expressed their views privately. Tokyo Governor Shintaro Ishihara has gone public, warning that the United States would lose any war with China.

"In any case, if tension between the United States and China heightens, if each side pulls the trigger, though it may not be stretched to nuclear weapons, and the wider hostilities expand, I believe America cannot win as it has a civic society that must adhere to the value of respecting lives," Mr. Ishihara said in an address to the Washington-based Center for Strategic and International Studies.

Mr. Ishihara said U.S. ground forces, with the exception of the Marines, are "extremely incompetent" and would be unable to stem a Chinese conventional attack. Indeed, he asserted that China would not hesitate to use nuclear weapons against Asian and American cities—even at the risk of a massive U.S. retaliation.

The governor said the U.S. military could not counter a wave of millions of Chinese soldiers prepared to die in any onslaught against U.S. forces. After 2,000 casualties, he said, the U.S. military would be forced to withdraw.

"Therefore, we need to consider other means to counter China," he said. "The step we should be taking against China, I believe, is economic containment."

Officials acknowledge that Mr. Ishihara's views reflect the widespread skepticism of U.S. military capabilities in such countries as Australia, India, Japan, Singapore and South Korea. They said the U.S.-led war in Iraq has pointed to the American weakness in low-tech warfare.

"When we can't even control parts of Anbar, they get the message loud and clear," an official said, referring to the flashpoint province in western Iraq.

As a result, Asian allies of the United States are quietly preparing to bolster their militaries independent of Washington. So far, the Bush administration has been strongly opposed to an indigenous Japanese defense capability, fearing it would lead to the expulsion of the U.S. military presence from that country.

On Nov. 16, Mr. Bush met with Japanese Prime Minister Junichiro Koizumi. The two leaders discussed the realignment of the U.S. military presence in Japan and Tokyo's troop deployment in Iraq.

During his visit to Washington in early November, Mr. Ishihara met senior U.S. defense officials. They included talks with U.S. Defense Deputy Undersecretary for Asian and Pacific Affairs Richard Lawless to discuss the realignment of the U.S. military presence in Japan.

For his part, Mr. Ishihara does not see China as evolving into a stable democracy with free elections.

"I believe such predictions are totally wrong," Mr. Ishihara said.

It's hard saying one day that Murtha was a left wing commie sympathizer who loves Michael Moore, to saying that he's a good man by the VP.

Running a loop more than once around the perimeter of a roof or attic would create unpredictable lobes on certain frequencies which can very possibly cancel each other out resulting in lose of any gain and would almost certainly perform very differently on various frequencies.

Making a "conical" multi-turn loop would have questionable results not to even mention the difficulty in analyzing its characteristics even with a computer antenna design program - IMO.

A 1-wavelength (at its lowest operating frequency) horizontal loop with a single turn will be very broadbanded. But unlike a dipole the horiz. loop will have equal gain to a dipole across the entire HF band compared to any dipole designed for the same frequency AND AT THE SAME HEIGHT.

The E-Police State: American Commerce, Chinese Objectives, and the Implications for Israel

Ethan Gutmann, author of Losing the New China, gave the following address at the Tel Aviv Nine Commentaries Forum, November 10, 2005:

Thank you. I especially want to thank those individuals who made it possible for me to attend this important forum.

I don't use that word - important • just to be polite. I've attended similar forums in the US, Hong Kong, and Taiwan. The response to the Nine Commentaries in the mainland sent the world a flare from China, igniting an international response, reinvigorating the Chinese dissident movement, and astonished the CCP (Chinese Communist Party).

But this forum is particularly important because it's in Israel. And this is a country founded by individuals who experienced the worst that the twentieth century could offer. They emerged with a highly developed sense of tragedy, a unique moral sensitivity that has been tested under fire again and again. I want to speak to that sense today.

I'll focus on American companies, particularly their technical assistance in constructing China's "Big Brother Internet." I chose this subject, rather than say the Loral and Hughes cases - where the PLA (People's Liberation Army) also benefited from American technology - because the Internet is the lynchpin of the argument that unrestrained trade, and the growth of capitalism, will bring democracy to China. Most findings flow directly out of my professional experience in Beijing. Through no special effort, I also ran across Israeli companies who were involved in similar activities. Most were in China to sell military technology.

The US and Israel have different national interests in trading with China. But the failure to achieve those interests shows a surprisingly similar dynamic. I don't claim any unique expertise, but I will close by venturing some comments • however preliminary - on Israel's China strategy.

I'll open with a quote from my book. It's from Peter Lovelock, a top Internet analyst in Beijing on the CCPs Internet strategy:

"These are Marxists. Control the means of communication. Embrace the means of communication. Fill it with Chinese voices. If they can block the outside and block relationships between Chinese voices, no one will listen."

As a Beijing business consultant for several years, I know that Lovelock's statement rings true because I saw it happen.

Back in 1999, working from my Beijing office, I received an e-mail from a US friend with the words "China," "unrest," "labor," and "Xinjiang" in weird half-tone brackets, as if the words had been picked out by a filter.

I'd never really seen anything like it. But I assumed it was a glitch, a remnant of a keyword search program from a Chinese State Security computer. And the electronic janitor had neglected to clean it up.

What I didn't realize at the time is that the capability to search inside my e-mail, primitive by the current standards, came from an American company operating in China. In the 1990s, few areas of American enterprise in China carried as much moral glamour as the Internet. Every technical advance and every market restriction lifted were not only business opportunities for American information technology companies, but potential advances for Chinese democracy.

The CCP had different objectives: Don't get left behind. Focus on science and technology. Modernize. Get rich.

Block the outside. As Zhu Rongji said: "Better to kill 1000 in error than to let one slip through." Instead, fill the Internet with Chinese voices and Chinese nationalism, and "make China dominant by 2005." Use the Internet as a political tool. Create government websites to lend a veneer of sophistication, openness and accountability. Regulations that had never been on the books suddenly appeared online.

Monitor the Chinese Internet and preempt public concerns before they reached the boiling point. Identify enemies. Suppress them with formerly unheard-of speed and efficiency.

Modernize military communications and tactics, including the ability to wage Internet warfare. Even if American businessmen on the ground in Beijing were aware of these objectives, we underestimated the Chinese leadership's ability to carry them out: American business believed our technological and financial momentum would simply outpace the Chinese regulatory framework.

Computer engineers assured us that the Internet's architecture was too clever, too egalitarian; the message would always get through.

Human rights advocates touted the Internet as a reporting and organizing tool. Overseas dissidents saw a platform. Chinese dissidents saw a link to the global community.

As for surveillance, we all assumed that state security could acquire any routine communication they liked, but could they collate it? No, we thought. The correct answer was: Not yet. With the construction of the first public access web by Global One in 1996, Chinese authorities became interested in keyword searching and "looking into the packets." The CCP wanted to selectively block the web, but Chinese users were doubling every six months. And the architecture of the Internet was not standardized. According to Chinese engineers, Cisco Systems agreed to produce a specially configured firewall box, which could block the forbidden web on a national scale. Cisco sold the firewall boxes at a discount, capturing eighty percent of China's router market, an unprecedented success story.

But new sites kept popping up. So the search engines had to be controlled too. Yahoo, the biggest portal in China at the time, responded by patrolling its chat-rooms, and disabling search phrases such as "Taiwan independence" and "China democracy."

A top Yahoo rep told me: "It was a precautionary measure. The State Information Bureau was in charge of watching and making sure that we complied. The game is to make sure that they don't complain. The crackdowns come in waves. It's normal."

"Normal" meant Great Wall Version 1.0. The first upgrade began in October 2000 to May 2001, as the Chinese authorities unveiled new laws:

Internal monitoring software installed in cybercafés and across the web.

Internet Service Providers were ordered to hold all Chinese user data (phone numbers, time online, and surfing history) for 60 days.

Proxy servers—a widely used method to circumvent the firewall—were hunted and blocked. Intensive construction of the "Gold Shield Project," a nationwide digital police and surveillance network.

Surveillance became the boom market. And although the picture gets complex here, with companies such as Nortel, Motorola, Nokia, and smaller companies, like Netfront, even some spyware companies - Chinese State Security ultimately acquired advanced encryption, location tracing, and 300 live computer viruses to play around with (provided by Network Associates, Symantec, and Trend Micro).

Censorship became selective, sophisticated and "voluntary." For example, Yahoo signed an Internet pledge to protect "social stability." Online news sites such as the South China Morning Post were punished for indiscretions by blocking for discrete time periods. Google was blocked.

US defense attachés confidentially expressed concern about Israeli companies (such as Gilat) transfer of high-end information technologies. Because I personally knew their rep, I was more concerned about an Israeli company named iCognito.

You might know them as PureSight. Smallish company. Recently sold to a larger concern in Boston, MA. But back in 2001, iCognito pioneered the use of evolutionary algorithms - "artificial intelligence" - as a censorship and tracking tool. ICognito surfed just ahead of the user, analyzing the content of a website before the user actually sees it on the screen, blocking access to adult content, shopping, and on-line gambling, making workers more productive. But the CCP didn't care about sex. They would always ask the iCognito rep: "Can it stop Falun Gong?"

When Google returned to the Chinese web, one observer noted: "The Chinese technology appears to be capable of learning as it goes. An initial search for "Tibet independence" yesterday on Google went through unchecked. When repeated a minute later, it was blocked." By the Shanghai "Gold Shield" trade show in December 2002, Nortel claimed to have a 100% packet capture system specifically designed "to catch Falun Gong." Sun Microsystems and a

Chinese partner, Golden Finger, were hawking a national fingerprint and facial recognition system, "Facecatch," to be embedded in a national ID card.

Cisco scored top billing for its presentation; "The CISCO Network Solution for the Gold Shield Project," unveiled "Policenet," secure linkage to provincial security databases that allowed cross-checking and movement tracing. I'll make the brochures available after the forum.

A systems engineer from Cisco's Shanghai Branch, explained how a Chinese policeman or PSB agent using Cisco equipment could now stop any citizen on the street and remotely access their political and family history, and even read their e-mail.

Cisco went on to build the structure for the national PSB database, and as of June 2003, it was resident in every province of China, except Sichuan.

Policenet is significant. Western press interest has focused on Microsoft's refusal to let Chinese bloggers use the word "democracy" in their subject headings or Google's confession that its news site is tailored to CCP specifications, yet the heart of the Chinese strategy is overlooked.

The Chinese authorities don't want to block the web. They want Chinese users to censor themselves. Surveillance - and the awareness of surveillance - leads to self-censorship. And that's where Cisco comes in.

Recently Shi Tao, a Chinese journalist, was sentenced to 10 years in jail. According to the court records, Yahoo provided information to the PSB that assisted the conviction. The Western press reacted strongly. That's natural; the story grafted a human face onto the issue, even better, a journalist's face. And Yahoo's explanation that they were just following orders - was repugnant. But dissidents are arrested every day in China using e-police methods. And you won't find Cisco in the court records. Why? Because Cisco's Policenet is the PSB.

The Internet was supposed to be a Trojan Horse we funded it, built it, and pushed it into China. But the hatch may never fully open. True, the response to the Nine Commentaries tells us that the Internet wars are not over. But reports of Titan Rain and other PLA units hacking the Pentagon suggest there's a new battleground. "Blowback" our own technology used against us has begun.

Now let's turn to Israel's China strategy, which has centered on selling military technology to the PLA.

Allegations that Israel has been a conduit of US military technology to the PLA have received most of the attention. Experts disagree on sale specifications, scale, even if they actually took place. Chinese classified records will eventually settle that debate, but until that happy day when we can access those archives, I'm less interested in whether the technology had US origins, and more interested in the PLA's strategic goals.

From ? to ?, the goal was simply to respond to Desert Storm. To modernize military command, control, communications, and electronic intelligence, the Chinese emphasis shifted from building an advanced industrial base to the information sphere: semi-conductor manufacturing, and attracting investment in avionics and precision-guided munitions components.

Thus, Patriot anti-missile data was extremely desirable. US intelligence analysts claim [illegible] and the Israeli government denies [illegible] that Patriot components were made available for reverse engineering, enhancing the penetration and accuracy of the Chinese M-9 missile (aka CSS-6, Dong Feng-15). M-9s were tested around Taiwan during the elections of 1996, and now constitute a third of the Chinese short-range ballistic missiles aimed at Taiwan.

Another case of "may have happened" took place in the mid-90s. The Lavi (partially based on the US F-16,) bears a similarity to the Chinese prototype F-10 jet fighter (aka Chengdu J-10,) now coming into operation.

A sale that definitely happened: the Harpy Assault Drone (useful for an assault on Taiwan's air-defense and radar systems). Taken together, these assets fit into an emerging strategy for air superiority in the Taiwan Straits.

Israel was not alone. US companies became the dominant players and investors in China during this period, and the main target of systematic reverse engineering by companies such as Huawei. And with French, Russian and Israeli technology and training, military command centers full of sophisticated electronic equipment emerged.

? to ? were dominated by a sense of crisis. During the Chinese missile test around Taiwan in ?, the US carrier battle group stationed near the Taiwan Straits got the attention, but the US AWACs flying all over China are what really spooked the CCP. Airborne early warning systems are crucial for command, control, and tactical surveillance of targets. The PLA refocused on ways to blind AWACS [illegible] or acquire them.

Enter the Israeli-built Phalcon airborne early-warning system. China wanted four of them, enough to stay in the air continuously during a conflict. The US pressured. Israel cancelled the sale.

From the aborted Phalcon sale to the present, the PLA has been pursuing AWACS, submarine technology, anti-satellite technology (optical tracking solutions, lasers, micro-satellites), MIRVs, and electronic surveillance. Thus the recent aborted Israeli upgrades on the Harpy Assault Drone [illegible] following the same US pressure as the Phalcon case [illegible] may not seem that important. But it wasn't about the PLA's ability to sniff Taiwan's radars as much as the EU's threat to lift the Chinese arms embargo. Israel's restraint bolstered the US argument. If the EU had lifted the embargo overwhelming pressure from American companies to compete in the China arms market would have followed. And American policymakers might well have given in. Perhaps that sounds hypocritical or perverse. But it's the reality.

Now there are two major Israeli arguments for selling arms to China. Let's start with the strongest.

Israel is perpetually outnumbered. Thus, Israel's defense technology must be superior. US technology is a starting point, but ultimately, Israel must have a reliable defense research and development base of its own. The IDF is not a large enough customer to support the R&D base (about 25% of sales). Israel must sell in volume (10% of the global arms market).

Now it may make some people ethically queasy to hear this, particularly those who don't live in Israel: but I think this is a good strategy. Hypothetically, if Taiwan had followed an Israeli-style defense development model, we might not be so concerned about China's looming offensive capabilities.

However, the argument is not China specific. The China-Harpy deal was potentially worth about 35 million US. Israeli weapon sales to Turkey have amounted to about 3 billion US since ?, not counting intelligence sharing and the relationship benefits.

Or look at India, where the Phalcons went. Diplomatic relations with India commenced in ?, and now Israel is its number two arms supplier: SAMs, drones, radar systems, avionics. Both have a common enemy in Jihad and state-sponsored terrorism and have shared intelligence, defense research and development, methodologies.

Is the Indian market saturated? No: Russia is number 1 because they sell for cheaper, but India is getting richer and more proactive. And when it comes to preemptively defeating terrorist insurgency: advantage, Israel.

If Japan changes its constitution does Israel have business contacts in place? I'm told yes, of course. OK, so let's say it, why not Taiwan? Which brings us to the second argument:

Israeli arms sales are a method to influence China (and theoretically, the UN Security Council), a method to share in Chinese military intelligence. Above all, arms sales are a method to rein in Chinese arms sales to Israel's enemies.

And here the similarity to American wishful thinking about the Internet becomes unavoidable. As American business has re-discovered again and again, and as Peter Enav from the Hebrew University points out: Chinese foreign ministry verbal assurances are basically meaningless. Arms sales are "conducted via fantastically intricate networks of dealers." Sounds plausible; after all this is China. There's always a corrupt element.

But ultimately China's strategy in the Middle East is structurally opposed to Israel's interests. The CCP's primary directive: oil for the lamps of China. The external strategy is to arm America's [illegible] and Israel's - enemies: Iran, Saddam Hussein's Iraq, until recently, the Taliban. Even Al Qaeda. Through the research of authors such as D.J. McGuire, the evidence on this point is now simply overwhelming.

For example, the newest plastic explosive, far more lethal than semtex, used in the Tel Aviv club bombing was created by the Chinese defense contractor ZTF. When it comes to oil, China does not see a spot market, but a zero-sum game.

It's ironic. Israeli discussions over cancelling the Harpy upgrades seem to center around American heavy-handedness, and the Israeli right to act independently. But these are style questions. The substantive question is: has the Israeli strategy worked? Can anyone make the case that China is a force for democracy in the Middle East? Or that China plays no part in Iran's militarization? Or that there will be no blowback from Israeli weaponry dispersed throughout the Middle East under brand names such as Norinco - in the future?

There's been progress. Six months ago, Defense Minister Mofaz warned the top 50 defense firms that there must be "full transparency" report every trip to China, every business negotiation.

Yet the Defense Ministry has not banned defense industries from marketing non-lethal systems and platforms to China. And therein lies a problem.

Dual-use technology transfer to the PRC was a constant throughout the ?s. Starting about 2000, with the IT technology boom, it became a "floodgate." But that's not the real problem. In fact, you could have even made the argument that continued military technology transfer from Western companies was ,I>preferable to China building an indigenous research and development capability.

I put that statement in the past tense because IBM, Intel, Honeywell, General Electric, Lucent, and Microsoft all have built R&D plants in China. For example, Motorola has 25, with China investment surging to $10 billion, 5000 researchers and engineers by 2006.

These facilities are fully equivalent to Motorola's US centers, except that these are engaged in advanced research for the Ministry of Science and Technology's "863" project: 4th generation technologies with potential military applications. With no background checks on CCP membership or PLA experience, the technology goes straight out. Are Israeli companies doing this too? Well, the Israeli presence at every hi-tech or military trade show held in China suggests they are. And in 2003, the Ministry of Science and Technology in Beijing and its counterpart in Jerusalem began funding joint research in "advanced materials" for use in "telecommunication, optical data storage and space technologies" including lasers. These are surface indications of a much darker problem set. And again, Israel can't ignore the potential for blowback.

But the moral component can't be brushed aside either. Just as arms sales are not just a business for Israel but a component of survival, they cannot be divorced from their global implications either. The Israeli strategy brings responsibilities.

First, the responsibility of one small democracy to another: both Israel and Taiwan are systematically rejected by international institutions, surrounded by forces whose legitimacy is implicitly tied to their destruction alive in the bitter sea.

I've spent some time in Taipei over the last couple of months. The mood is depressed and anxious, if not yet fatalistic. There's a potential tragedy of

epic proportions forming for the Chinese people, and for global democracy. Taiwan's fall, through technology transfer, through a loss of American resolve, through the smug callousness of the UN and Brussels well, this is the blueprint for Israel's fall as well.

So I appeal to Israel's moral sense, but most of all to the reserves of historical memory and wisdom that run through Israel's culture.

Take a good look at the New China. Look at the current trends. Technology without the restraints of democracy. An e-police state whose legitimacy is built on Han Chinese nationalism without moral content, and expansionism without ideals. Look at the controlled economy, and the seamless absorption of investment and technology by the PLA. Look at the compulsive licking of old wounds, the Korean War, the Opium War, the Japanese. Look at the greater China territorial obsessions, where each resolution (Macau, Hong Kong) starts the clock ticking towards the next demand. Finally, look at the outwardly irrational - yet ruthlessly systematic - scapegoating, pursuit, and slaughter of Falun Gong practitioners.

Perhaps much of the world regrettably including the majority of businessmen and politicians in my own country - has some trouble connecting those dots, but for a Jewish state, it should be an easy call.

It's well past time to correct the American business strategy in China, but it's time to reconsider Israel's China strategy as well. Perhaps that process can begin with your questions and comments. Thank you.

Again, running a horizontal loop more than once around the attic or roof perimeter would create lobes which would be unpredictable and likely cancel each other out at certain frequencies.

A single large horizontal loop will perform equal to any dipole at the same height.
The advantage is you only need one horiz. loop to equal the bandwidth of multi-multi-dipoles for all the HF bands.
Random multiple turns of the horiz. loop would create unpredictable results and likely perform worse on certain bands compared to a dipole.

There is an easy mod to add fine tuning. It can be found on the 2010
Yahoo group files section. with the filter mod it does a pretty good job
but, it is no R-75

I bought a radio for three dollars and a speaker (Realistic Solo speaker,it has a wooden cabinet and a large oval speaker with a smaller round speaker just to the right of the oval speaker) for two dollars at the Goodwill store this afternoon.On the front of the radio it says,IC FET FM/AM 4 Channel Stereo Panaonic.There are four slide levers on the front of the radio for Left Channel and Right Channel and to the left are two push buttons for Power and Loudness and there is a jack for earphones and to the right of the four slide levers are two knobs for Treble and Bass and over on the right hand side of the radio are two knobs for Selector and Tuning.On the back of the radio it says Model No.RE-7750 FM-AM - FM Stereo Serial No.93235 and there are a bunch of jacks for speakers and Phono and Rec Out and there is a large jack for Remote Balance and there are two places for FM ANT.The radio is heavy and appears to have a wooden cabinet.I haven't hooked up any speakers to the radio to try it out yet.Assuming the radio works ok,is it suppose to be a good radio for AM dxing?

"for $ 64 USD, it's a nice little shirt pocket sized double reduction Shortwave radio. You can take it for a walk, out into the park, or off into the woods & wilds, or cycle around listening to AM , FM or Shortwave.

Can't do that with a R75, Sat 800 or R8B."

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

looks like it cuts off < 5800..

- No SSB,

- No Preamps

- No DSP

- No twin PBT..

- No Multiple Antenna inputs..

- But Hey! It's got a thermometer, cost ~64 Dollars & fits in yer short pocket . .

- Sounds quite tolerable from here

The TRUTH is it takes a 20 amp supply unless you buy a cheap ass radio shack or pyramid power supply ....20 amps is what you need if you want to transmit.

2 amps will get you recieve only.

The Icom R-75 and the Yaesu FRG100 wont plug into the wall unless you want to see lots of smoke and fire! They are both 12 volt radio's.

They both take a small 1.5 amp supply as well.....What this guy dont tell you is that a wall wart...or a small plug in supply usually means lots of NOISE in the reciever

A well made supply like ASTRON or even a battery works best if your serious listener!!

The same 12 volt 1.5 amp cheapo supplies would work great with the Icom 718 if its recieve only so you DONT need to figure in a big 100$ supply but you could always add that later and get your ham ticket?

Saw an Eton ad in the Los Angeles Times yesterday. It showed their newest crank-up powered radio charging a cell phone & touted it's usefulness in an emergency. It was a full-page ad if that gives an indication of how much they are willing to spend on advertising.

I've heard nothing but good things about ARR gear. However, you are probably correct that most situations will not find this preamp to be useful.

How about following this preamp with a passive splitter to make a low noise multicoupler?

I wonder if they'd consider spending 20% or so LESS on advertising and putting the money saved into research to improve their portable radios. Why, after all these years, do NONE of their small portables feature a synchronous detection circuit and why do so many of their new models offer single conversion when, at similar or even lower prices, other manufacturers offer dual conversion? (In MY opinion, anyone who spends $150.00 on an ANALOG single conversion SW radio, no matter how "good" it supposedly sounds, is wasting money!)

Just my thoughts.

Joe

Yes, since I used my IC-718 for transmitting as well as listening, I needed a good power supply and my local dealer recommended a Samlex 1223 (23 amp supply)... no problems, no noise, worked great... I think it cost me < $100, if I recall correctly. It has a very small footprint, and is very light.

The Astrons are also decent power supplies. The reason I chose the 1223 over an Astron was because I had limited space in my radio room at the time and the Astrons sold at my local dealer were larger and cost more $$.

In the last couple weeks Radio Australia has gone from coming in like gangbusters to barely coming at all. This morning, amid the noise, I heard some interesting music on LNL so I broke down and went for the podcast. It turned out to be a version of Waltzing Matilda (!) like you've never heard before, and good too. 11:34 into http://www.abc.net.au/rn/podcast/feeds/lnl_20051122.mp3 and I heartily reccommend it. You'll thank me for this. Unfortunatly, at about 10 min into the broadcast, host Phillip Adams mentioned this will be his last week at LNL. The combination of interesting guests, quick wit and intellegent conversation has become as welcome as the accompanying 7am cup of coffee. Amoung the handfull of available downloads is a visit with Kurt Vonnegut, also well worth a listen.

English broadcasts listed here:
http://www.primetimeshortwave.com/

Look on the left for schedules in different formats.
In each is a target area for the broadcast (see "notes" in the schedule)
The "note" saying "As" is target Asia

Clip the cable to the aerial and get as much of the rest of it as you can near
a window. Even tape it to a window from top to bottom. Hang it out the window.
Go outside away from all buildings and electronic interference and loop the cable
over a tree limb.

==========

CLIMATE CHANGE
« Thread Started on Today at 5:52am »

The Carteret Islands are almost invisible on a map of the South Pacific, but the horseshoe scattering of atolls is on the front-line of climate change, as rising sea levels and storm surges eat away at their existence.

For 20 years, the 2,000 islanders have fought a losing battle against the ocean, building sea walls and trying to plant mangroves. Each year, the waves surge in, destroying vegetable gardens, washing away homes and poisoning freshwater supplies.

Papua New Guinea's Carteret islanders are destined to become some of the world's first climate change refugees. Their islands are becoming uninhabitable, and may disappear below the waves.

A decision has been made to move the islanders to the larger nearby Bougainville island, four hours' boat ride to the southwest. Ten families at a time will be moved, over one to two years, once funds are allocated for the resettlement program.

"It's a pretty hard life out there on the islands. Some of the homes have been washed away," Joe Kaipu, the senior district coordinator of Bougainville, told Reuters by telephone.

"The only action now is to resettle them," he said.

A United Nations panel of more than 2,000 scientists has predicted that average sea levels are likely to rise between 9 and 88 cm (3.5 to 35 inches) by 2100, mainly because of a build-up of heat-trapping greenhouse gases in the atmosphere from the burning of fossil fuels, such as oil and coal.

Sea levels are expected to rise because of a melting of ice caps and because water expands when it warms. If the entire Greenland ice sheet melted in coming centuries, for instance, sea levels would rise by

seven meters.

Many scientists say a 50 cm rise in sea levels could cause a 50 meter retreat of the coastline in low-lying areas.

At the higher end of the forecast, the sea would overflow the heavily populated coasts of countries such as Bangladesh, and cause low-lying island states like the Indian Ocean's Maldives and South Pacific's Kiribati and Tuvalu to disappear.

SINKING ISLANDS

"It's a matter of survival for us. If our islands go under, we all go under," said President Anote Tong of Kiribati, 33 low-lying islands covering 5 million sq. km (1.9 million sq. mile) in the South Pacific and home to about 100,000 people.

"We move back from the shoreline, (but) how far can we move back? We are in danger of falling off the backside of our islands," Tong told Reuters at a recent Pacific leaders' summit in Port Moresby, capital of Papua New Guinea.

Kiribati's highest point is 87 meters (261 ft) above the sea. Most islands are coral atolls covered with just 2.5 meters (just over 8 ft) of hard sand and meager soil. There are no rivers and most islands enclose a lagoon.

Two uninhabited Kiribati islands, Tebua Tarawa and Abanuea, disappeared underwater in 1999, according to the South Pacific Regional Environment Program, and the island of Tepuka Savilivili no longer has any coconut trees due to salination.

Tong said the world's big polluters, like the United States and Australia who have remained outside the United Nations' Kyoto Protocol on reducing greenhouse gases, must face the moral consequences of their inaction.

"That is a question that they have to ask themselves -- are they willing to see us go under?" Tong said.

The United States pulled out of Kyoto in 2001 when President George W. Bush said it was too expensive and wrongly excluded poor nations from the first round of cuts to 2012. Australia has also refused to ratify the protocol.

ENVIRONMENTAL REFUGEES

Scientists say rising sea levels would also foul freshwater supplies for millions of people and spur mass migrations.

A recent UN study forecast that some 50 million people could became environmental refugees by 2010, driven from their homes by desertification, rising sea levels, flooding and storms linked to climate change.

Tuvalu Prime Minister Maatia Toafa hates the term "environmental refugee" but admits his 11,600 people may have to abandon their South Pacific island homes.

Tuvalu consists of a fringe of nine atolls, with the highest point no more than 5 meters (17 ft) above sea level, but most a mere 2 meters (6.5 ft) high.

A small island off the capital Funafuti has already disappeared beneath the sea and some islanders have been forced to grow crops in tins because the soil has become too salty.

In February, only days before Kyoto came into effect, Tuvaluans in the capital watched high tides and strong winds send waves crashing across the main road. Children rode the waves on makeshift surfboards, trailing behind cars and vans dashing for higher ground.

"The prediction is (that) in 50 years Tuvalu will not exist," said Toafa. "Resettlement is impossible in the country because all the islands are low-lying," he said from Funafuti.

MONTREAL HOPE

In the Indian Ocean, the Maldives' 1,200 coral islands lie so low that some were briefly swamped when the December 26 Asian tsunami hit the scattered island state off India.

Maldives President Maumoon Abdul Gayoom published "The Maldives: A Nation in Peril" in 1998, outlining the danger of rising seas. Since then, coastal defenses have been built and efforts made to protect reefs and guard against storm surges.

"We are doing all we can to protect our nation. However, what we do here in the Maldives does not guarantee us an environmentally secure future," Gayoom told Reuters.

"Our safety would only be certain when the international community takes concrete steps to curb greenhouse gas emissions, and specific actions to reduce the threat of sea level rise."

Small island nations want a new insurance facility to help underwrite the cost of climate change-related weather damage, and have called for a special fund to build coastal defenses, protect water supplies and develop new forms of agriculture.

Gayoom said he hoped the UN climate change conference in Montreal, starting on November 28, would lay foundations for a post-Kyoto solution to climate change, by finding common ground with big polluting nations.

"Those who have rejected the Kyoto Protocol should not wait for unequivocal scientific proof of the climate change process, but need to find the political will to go beyond the short-term benefits of their respective countries, for an environmentally secure future," Gayoom said.

Majority Believe White House Misleads Public, Poll Shows

THE WALL STREET JOURNAL ONLINE

November 23, 2005

A majority of U.S. adults believe the Bush administration generally misleads the public on current issues, while fewer than a third of Americans believe the information provided by the administration is generally accurate, the latest Harris Interactive poll finds.

While the telephone survey of 1,011 U.S. adults indicates about 64% of Americans believe the Bush administration "generally misleads the American public on current issues to achieve its own ends," opinion on the topic is clearly divided along party lines.

A large majority (68% to 28%) of Republicans say the Bush administration generally provides accurate information.

However, even larger majorities of Democrats (91% to 7%) and Independents (73% to 25%) think the information is generally misleading.

More evidence that the Bush Crime Family and PNAC were going into Iraq no matter what.

War on Terror is an excuse to rob the American people of treasure and freedom.

And I suppose you winners were too busy to hear yesterday's news about Iraqis -- Shia, Sunni and Kurds united -- just signed onto a formal written document that claims it is "justified" for Iraqis to resist Americans. (That's what you get when you teach your friends about little things like the Revolutionary War and the Bill of Rights.) Those are your puppets (err, friends) writing that document, people that supposedly welcomed your so-called liberation, saying it's okay to target American GIs. And who is your wonderful Iraqi government getting into bed with? Why, their best friends the Iranians, naturally. Now that Saddam's out of office, a Shia resurgence in the mosques and in the seats of power is a great thing for Iran.

Bush's war gets you into bed with Iran. And you and your kids are going into debt to the commie Chinese to pay for the mess.

You idiots are too stupid to realize you are supporting a pair of the world's worst regimes with real WMD and are real threats, and yet you can't even beat down a few deadenders using weapons improvised from junk found under a kitchen sink.

Another Empire Backfire.

4001. Re: CLIMATE CHANGE

Newsgroup: rec.radio.shortwave
Date: 2005-11-23 16:37:24 UTC
From: "John S." <hjsjms@cs.com>
Message-ID: <1132763844.698145.129820@g14g2000cwa.googlegroups.com>
Source record: 50852

It's safe to say most of us know less about the real causes of global swings in temperature, water level and depth of the ice sheets than we would care to admit. I think the causes of global climatic change are a good deal more complicated and involve long term swings as well as short term man-made causes. I find it interesting for instance that while Glacier Bay in Alaska has continued to deepen since it was discovered in the 1800's while glaciers around it continue to grow.

Right on Bill......
In every conflict we rubber-stamp these as "losers". The real problem with these people is that they are self-centered and often live in a la-la world that doesn't exist. The USA is far from being a "bad guy" - when the USA passes on so will the light of the war. It is a shame that manhood left the Canadians......perhaps those peace freaks and draft-dodgers of the 1960's stayed up there and propagated. In World War I and II you would have been proud of having them by your side...now all that is left is the Brits, the Aussies (love those down-unders), and our new allies, the Indians.

My apologies for clogging this group with political views...Ineed and will stick to shortwave from now on....my example should be emulated by those chosen few who always rant political views instead of listening or technical information or experiences. Again, sorry to all in this news group.

No, because the cost of erring on the side of caution is potentially
enormous expense with little defined payback.

There's no accounting for taste. Are you into alternative country
or something? Came in OK on 9590 here in Seattle. At least my tape
sounds about the same as usual. (Since it comes on at 4 AM here,
my radio was a bit out of tune).

>Unfortunatly, at
>about 10 min into the broadcast, host Phillip Adams mentioned this

Well, at the end of the Thursday show, he said that Norman Swann was
taking the chair for the next three weeks, and then the Summer/Christmas
Vacation reruns. Sounds like he's going under the knife again.
(A couple of weeks back, he said that he was "feeling a bit crook").
Nothing about a permanent departure.

4042. DX RADIO MESSAGEBOARD

Newsgroup: rec.radio.shortwave
Date: 2005-11-23 21:33:52 UTC
From: "Keith and Phil at AussieSeek.com Political Messageboards" <nswamfm@yahoo.com>
Message-ID: <1132781632.885691.51260@g47g2000cwa.googlegroups.com>
Source record: 50890

The following is an email sent to you by an administrator of
"DXing.info Community".
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Hello,

First a couple of goodies; I have received some interesting
verifications, and would like to share the verie-signer information
with you, in
case you have heard these stations and happen to collect QSLs.

>From Mexico, XEPE Tecate BC (1700 kHz) has responded to me recently,
v/s President Jaime Bonilla, from email address
jmendez@jaimebonilla.com.
He wrote in English.

>From Afghanistan, Khost Radio from the town of Khost (1602 kHz) has
also verified by email, v/s Sakhi Miakhil, Director, email address
sakhi_miakhil@yahoo.com, also writing in English.

I believe that neither of these AM stations has previously responded to

any DXer, at least I haven't seen any verifications announced anywhere.

And just today I got a second verification for my report to Kalaallit
Nunaata Radioa, Greenland, broadcasting over utility station Ammassalik

Radio (OZL) on 3815 kHz. Earlier
(http://www.dxing.info/community/viewtopic.php?t=1898) I got an eQSL
from KNR, and today an eQSL from Ammassalik Radio (OZL), v/s Gerda
Vilholm, email OZL@tele.gl, writing in English.

I hope that you will find this verie-signer information useful. I will
post it later publicly on the DXing.info Community, but in case you
want to send a follow-up report, I am giving you, as a DXing.info
Community member, a headstart.

Then some news about DXing.info. DXing.info continues to be the top
DX-related website in the world, according to rankings and ratings by
Google Pagerank and Alexa. Visits to the website are steadily
increasing.
We now have 652 members, about 140 more than a year ago. Thanks to your

contributions, the Community serves as a valuable tool for the
worldwide DXing community. I hope that you will continue to be an
active
contributor - we all benefit from the exchange of information and from
sharing our DXperience. What is your latest logging or QSL? Have you
~~~~~~~~~~~~~~~~~~~~~~~~~~~

tried
any new equipment? We would all like to hear from you!

A few forums are still without a moderator. If you are interested, drop

me a line.

In case you have not used the Community for a while, and have forgotten

your password, you can get a new one by clicking here
http://www.dxing.info/community/profile.php?mode=sendpassword - and
after logging in, you can change your password by editing your profile.

Please consult the FAQ and previous letters
http://www.dxing.info/community/viewtopic.php?t=1249 for valuable tips.

As a brief personal note; I have recently been on a DXpedition to
Lapland. You can read more at
http://www.dxing.info/dxpeditions/lem214rep.dx
- the log itself has been delayed because of a computer disaster: my
hard disc broke down last week. I have had to pay a fortune to recover
even part of the information, but a lot was permanently lost, including

your personal emails to me. So please keep your email contact
information updated in your DXing.info profile, otherwise I can't get
in touch
with you. My eLife is in total disarray at the moment and I still don't

have a working computer, so please be patient if I am not fast enough
in
responding to your emails. And more delays are caused by my upcoming
work assignment in Venezuela.

I would like to remind you that maintaining this service takes a lot of

my time and money. You can help in both ways - either by supporting the

website financially or taking care of some of the responsibilities.
Whatever you can contribute is warmly welcome, especially now. This
website does not consider any membership fees, but if you feel that it
has
contributed to your hobby, please support DXing.info according to your
means. Even if it is only through shopping: just as before, you can buy

your annual DX publications via links at the DXing.info shop at
http://www.dxing.info/shop/

Wishing you a great DX season and looking forward to reading your
messages in the Community,

Best regards,
Mika Makelainen
Editor, DXing.info

It went OK. Zero beat on 5, 10 and 15 MHz. Before adjustment it must
have been right on the edge between 20 and 30 Hz off.

I also tweaked the RX-340, which was about 5 Hz low when warmed up. It
drifts around a bit when you first turn it on. Now it's 1 or 2 Hz low
when cold and about 1 Hz high when hot. The Drake stays a little warm
even when turned off so it does not drift at all that I can hear.

FROM Pellosi Poodle David's own link
http://nationaljournal.com/about/njweekly/stories/2005/1122nj1.htm
...
"One reason that Bush, Cheney, and Rumsfeld made statements that contradicted what they were told in CIA briefings might have been that they were receiving information from another source that purported to have evidence of Al Qaeda-Iraq ties. The information came from a covert intelligence unit set up shortly after the September 11 attacks by then-Undersecretary of Defense for Policy Douglas J. Feith."
...
"The secretive unit was set up because Cheney, Rumsfeld, Wolfowitz, and Libby did not believe the CIA would be able to get to the bottom of the matter of Iraq-Al Qaeda ties. The four men shared a long-standing distrust of the CIA from their earlier positions in government, and felt that the agency had failed massively by not predicting the September 11 attacks."
[Remember - Able Danger]
...
"In January 2002, Maloof and Wurmser were succeeded at the intelligence unit by two Naval Reserve officers."
...
"Internal Pentagon records show not only that the small Pentagon unit had the ear of the highest officials in the government, but also that Rumsfeld and others considered the unit as a virtual alternative to intelligence analyses provided by the CIA."
...
"The Pentagon unit also routinely second-guessed the CIA's highly classified assessments. Regarding one report titled 'Iraq and al-Qaeda: Interpreting a Murky Relationship,' one of the Naval Reserve officers wrote: 'The report provides evidence from numerous intelligence sources over the course of a decade on interactions between Iraq and al-Qaida. In this regard, the report is excellent. Then in its interpretation of this information, CIA attempts to discredit, dismiss, or downgrade much of this reporting, resulting in inconsistent conclusions in many instances. Therefore, the CIA report should be read for content only-and CIA's interpretation ought to be ignored.'
[THIS LAST QUOTE IMPLIES THAT INTEL MAY HAVE BEEN SHARED WITH THE CIA!]
...
"The Plame affair was not so much a reflection of any personal animus toward Wilson or Plame... but rather the direct result of long-standing antipathy toward the CIA by Cheney, Libby, and others involved. They viewed Wilson's outspoken criticism of the Bush administration as an indirect attack by the spy agency."

My loop is even simpler than the one you describe.

> Antenna Building (Life) is Full of Compromises [.]
>

But this design is based on voodoo.

> KISAP - keep it simple and practical - iane ~ RHF

take a single piece of wire and run it in a single loop horizontally on the
perimeter of your roof - forget the attic and all that fiberglass
insulation. Join the ends to either coax (use a balun if you wish) or use
ladder line and run it a cheap antenna tuner (MFJ).

What can be more simpler than that?

I have bought over the years, three Hallicrafters SX-62A's and one
SX-62 each one cost a little over $150.00. Single conversion.....good
receiver, great audio, has a decent fm section, what's not to like?
YMMV

Opinions are like rear ends, many of them stink!

Here is the actual, verbatim definition of "Passport's Choice" (from the 2005 Passport to World Band Radio...I don't have the 2006 edition yet):

"Passport's Choice. La creme de la creme. Our test team's personal picks of the litter...models we would buy or have bought for our personal use. Unlike star ratings, these choices are unapologetically subjective."

Just means the radio is a personal favorite of the editors. Doesn't mean it's better than other radios in its class, or the best model out there.

As far as the ads, they need them to pay for the publication (obviously). If Eton is the only company willing to pony up the cash, so be it. I've found that the reviews seem pretty even handed and fair. They really nitpick, IMO, and mention things that I think would bug very few people out there, in an effort to fully disclose everything about each model they review. So saying that they overrate Eton's radios is a little unfair, I think.

Happy thanksgiving to everyone.

I ran across this post on the web today and I thought it would be a good thing to pass along to others. It is kinda random, but it made me think of how lucky I am to be here now with my family. I am gratefull for every second that I am here in the good old USofA.

****
Take a few minutes before you start your thanksgiving dinner tomorrow to reflect on our lives as we live them in the 21st century. Our time here in the grand scale of infinite time is just a heartbeat. Maybe a few carefully chosen words tomorrow may inspire others who we spend thanksgiving with to reflect on their lives as well. We desperately need to understand our own good fortune. Rather than count the things we do not have we should smile on those that we do have. These times are difficult, but they are our times and we will survive them in spite of the harshness that surrounds us.

We need to be thankfull of what we have as we recognise the misfortune of others. We should take the time and appreciate the sacrifices that others have made for our well being. Our immediate concerns of course are for those closest to us. Our brothers, sisters, parents, and children. We need to be thoughtfull of others as well. Those in the USA, and those not. There are many here among us on this planet who have lost so much this year. Floods, fires, sunami, war, genocide, missing children, sickness and the list goes on and on and on. This has been an especially difficult year worldwide. As a nation we deeply grieve our losses to the confrontations in the middle east. Mothers, fathers, sons, daughters, friends, lovers, soldiers, humans, men and women lost. Personel tradgedy is all around us as well with the situation in New Orleans being just one example. How will we all survive? Help others to cope with their difficulties and our own sorrows will be lessened.

Say a prayer for those no longer with us and keep your thoughts on those who have lost so much. Be thankfull for what you have and reach out to others who are less fortunate. If you have a chance to comfort others then please do not squander your chance. If you are able to give then please do so. You will find comfort in helping others. We are a nation of givers and help is just one of the things we Americans are so very good at.

As you pick up your knife and fork and begin to eat put these thoughts of difficulty behind you. Enjoy the time that you spend with your loved ones but keep the theme of the day close to your heart. Remember out heretige. The first settlers to this great country had little

beyond nothing, but there was no lack of thanks among them. As the days wear on don't relagate thanksgiving to just another holiday past, and another turkey next year. Be thankfull every day that you are an American and reach out to those who need your help.

God Bless You

****

Happy thanksgiving to everyone.

A bunch of months ago somebody was asking about remote control model aircraft toys for taking pictures outside from high up in the air.Check out, www.readytoflyfun.com I saw the ad in my December 2005 Popular Science magazine.There is a little remote control helium filled balloon aircraft thingy and one model can get as high as about 6,000 feet in the air.A tiny light weight miniature wireless camera could be taped to the toy and wirelessly connected to a tv set or a computer,I think,but I have no idea of what the range of such cameras are.I wouldn't mind having one of those gadgets myself.

You have a point about using the amp for a remote antenna. However, I'm not sure you want 50 ohms impedance on the input.

I haven't check the price of the amp, but you should compare it to the Wellbrook ALA100, which could be used in the same application (remote antenna), plus it is designed strictly for loop antenna applications. It also floats the antenna above ground, i.e. the input is balanced.

Happy Thanksgiving wishes are coming at everyone from me also. That was a well written Thanksgiving food for thought yzordder. Thanks for sharing that. The only thing I'd like to add would be to pray FOR THOSE STILL LIVING and remember and think about THOSE WHO ARE NOT WITH US. All I know for today is that I'm very grateful just to be alive. Thanksgiving always reminds me of this: "Happiness is not having everything you want; it's wanting what you have."

BD - Oh No... I Paid Too Much ! ~ RHF

If the item is still being made and can be bought in a Discount Store
or Discounted OnLine.

The figure about 75% of the average OnLine Price or 70% of the Store
Price
as the Highest Bid on eBay.

Also factor in the Cost of Shipping when buying on eBay.

The Returned Items that C. Crane Co. puts up for sale on eBay
often go for nearly as much as the new items which come with
Free Shipping when bought directly from Crane. The items that
you buy on eBay from Crane require that you Pay for the Shipping.

The best deals from C. Crane Co. can usually be found in the
Orphans WebPages => www.ccrane.com/orphans.aspx

I've owned one of these for about five or six years. It's quite good (and the price is right), but not as low, low noise as my Wellbrook unit. However, the ARR preamp works great on DXpeditions in a quiet environment, giving weak signals a bit of boost. Usually, the s/n ratio is improved so I keep it in-line during DXpeditions. At home with the somewhat higher noise levels I don't make much use of it.

For One and All,

Has anyone done a side-by-side between the LF Engineering H-800
SkyMatch -and- Dressler ARA-60 : LF/MW/HF Active Antennas ?

What is your opinion as to which is the better 'small space'
Active Antenna ?
Did you use them both at the same time ?
Better Sensitivity ? Prone to Overload ? Better at LW/LF ?
Better at AM/MW ? Better at SW/HF ?

If you have only used one of these two Active Antennas :
What are your experience with that Active Antenna ?
Likes ? Dislikes ? Buy Again ?
Get something different and what ?
Are you using more than one ?
Sensitivity ? Overload ? LW/LF ? AM/MW ? SW/HF ?

Prime Time Shortwave anomaly. There is a presently a problem with uploading
files to Prime Time Shortwave where uploaded files overwrite the original
page with a blank page. Due to this the home (or index) page is currently
not available. You'll only get a blank page. This is only a temporary
situation. All the other pages of the website are unaffected. To go to the
website I recommend going to http://www.primetimeshortwave.com/time.html
You will be able to get to all the good pages from there. This issue will
be solved as quickly as possible. Sorry for any inconvenience.

I haven't used the Dressler but I have the H-800. It's an great little antenna. I never had any overload problems with it. My favorite thing about it is that, unlike most active whips, it's extremely quiet. If you find a quiet spot to put it in, you will not have any problem with noise; and it's small enough to put almost anywhere. A great value for the money, in my opinion. If I'm not mistaken it costs less than half of what the Dressler costs.

4116. Odd signal meter phenomenon

Newsgroup: rec.radio.shortwave
Date: 2005-11-24 14:14:14 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1132841654.860987.30260@f14g2000cwb.googlegroups.com>
Source record: 51216

A while back I posted about how the needle in my R8B's signal meter would occasionally be 'lazy'. Either it wouldn't spring to life when I powered up the receiver or, while the receiver was in operation, the needle would gradually fall to zero and become unresponsive. While this happened only occasionally, in recent weeks the problem worsened.

I was about to order a new meter from Drake, but decided I'd first open up the R8B to check for a bad solder joint or anything else that seemed weird. I meant to do that some time today, so last night I cleared everything (including a Lowe HF-150) off the table that was around the R8B. However, this morning, I noticed that the signal meter was operating perfectly.

Being lazy, I decided I wouldn't mess with the signal meter unless it started acting up again. So, I put everything back on the table. The problem returned. I then took everything off the table again, and the signal meter on the R8B again operated perfectly.

This correlation made me suspicious, so I began to experiment. What I found was that, when the HF-150 is sitting immediately to the left of the R8B (which is where it's sat for some time now), it somehow interfere's with the R8B's signal meter. It's like clockwork: when the 150 is there, the meter doesn't work properly; when I move the HF-150 away, the meter works perfectly. I can only guess that there's a magnetic charge at work affecting some part(s) of the R8B's delicate signal meter mechanism.

Weird, huh? Has anyone else experienced anything like this?

Steve

Odd. Where's the power supply for the HF-150? That's where all the
magnetism should be. The case is aluminum.

The power supply is far away and it never really changed location. The only thing that makes a difference is the HF-150 itself. I don't know that magnetism is at the root of it...I just don't know how else to explain it.

Just for the heck of it, I situated my 7030+ just to the left of the R8B to see if I could reproduce the effect, but no dice. Whatever the cause is, it's specific to the 150.

RHF - I can echo what Steve said. I have the H-800 and it works good for me. The only other antenna I've had was a 50' random wire around the eaves of the roof. The H-800 is equal to or better than that wire. It especially shines on the MW BCB. No overload problems on my JRC NRD-525.

My listening interest is approx 1/3 broadcast, 1/3 utes, and 1/3 hams. The H-800 is a good choice for a quality, easily set-up gen. purpose antenna.

Mine is in the attic, a very simple set up. I got the one with the BNC connection on the probe, thinking I may want to take it down and use it for a travel antenna when needed. The only "mod" I have done was to put right-angle BNC adapters on the control box for the in and out cables.

For me the H-800 is a good solution at a good price.

Best,

Greg

Hello All.

If anyone is interested in this MW antenna, a very good one, it is on sale this week. C. Crane sent me the following e-mail advertisement:

November 23, 2005

Deal of the Week

Twin Coil Ferrite AM Antenna By C. Crane

If you dislike the static and fade that sometimes go along with listening to AM radio, then we've designed a product especially for you. The Twin Coil Ferrite AM Antenna is considered to be the biggest advancement in AM technology in decades. Capable of dramatically boosting AM radio reception and reducing interference on your home stereo or portable radio, this antenna is an absolute must for any AM radio enthusiasts.

Item # TCA
Regular Price $99.95
Sale Price $79.95

Price includes standard shipping to the Contiguous 48 States.

For more information or to place your order, go to:
http://www.ccrane.com/deal or call us at 1-800-522-8863.

Best,

Joe

4133. KVOH East Coast USA Reception? When is best?

Newsgroup: rec.radio.shortwave

I am on the East Coast of the USA (Boston), and have been trying to catch KVOH.

From what I understand, KVOH is in California(?), and operates on 17.775(?) all day long....and 9.975 in the evening(?)

It appears that I am probably in their antenna 'null' being in Massachusetts.

IS there an hour of the day that would be best? (I understand that nights might not be best...and maybe a quiet daytime hour might be best to pick them up....)

Suggestions?

Thanks!

Rob

Hi Rob, I just tried to pick up 17.775, I have about S4 noise level on this frequency right now but when the noise level drops I can hear the station not to bad, 9.975 I hear nothing, I live in Fort Erie Ontario Canada on the Niagara River across from Buffalo NY, it's 12:55 PM right now, I would think if conditions get better I would have no problem receiving this station. I'm using the 150' Foot Longwire Antenna inside my apartment

No, I don't (probably should). Also noticed that this happens when the 150 is on battery power. You can set it beside the R8B and watch the signal meter drop.

4141. EiBi's database and Acces

Newsgroup: rec.radio.shortwave
Date: 2005-11-24 18:21:17 UTC
From: cotefenetre@yahoo.com
Message-ID: <1132856477.497428.190260@g47g2000cwa.googlegroups.com>
Source record: 51241

I quite like EiBi's database which I use with Access as to be able to look for specific stuff.

Unfortunately, I got an issue I don't know how to deal with (I'm not really into Access). Some rows look like:

0000 1111 Sa G BBC Af 99999-d (actual record doesn't exist)
87888
45333
8788
7777 9999 Su F RFI Af 67667

How can I "write" all the empty fields at once with its appropriate registers?

Thank you in advance for your replies and specially to the EiBi's author.

Dear Les,

Obviously you are a collector of that model. My comment was meant for those people who are buying a modern radio for daily use. Frankly, old tube "boat-anchors," well-designed in their day though they may have been, are not for most users today much as a 1959 Cadillac convertible, "fancy" and advanced as it was then (and, even now, unbeatable in a Fourth-of-July parade), would not be suitable for most drivers today. And today's single-conversion radios, analog OR digital, are a waste of money when you consider the price for good dual-conversion SW radios, some of which even feature dual bandwidths and SSB reception. You can select from a number of models selling for less than $100.00.

I too have an old "boat-anchor," a Lafayette Model HE-10, its associated speaker the HE-11, and a pair of vintage crystal headphones. I trot this out a few times a year just for old times' sake. It's nice to see the tubes light up and to use the wonderful knobs with their gorgeous flywheel effect (something sadly lacking on today's receivers).

But there's absolutely no way I would ever go back to a single-conversion receiver (with its images that even the best single-conversion receiver cannot eliminate) nor would I go back to any radio that does not have a synchronous detection circuit (and thus have to suffer with selective fading distortion). If I'm not incorrect, the Hallicrafters SX-62 models, like many radios of that time, cannot even receive SSB and, though they may (I'm not sure) feature a crystal calibrator, you still cannot tell exactly the frequency to which you're tuned. And, like all analog-tuned receivers, to a greater or lesser extent, they drift.

While, for a collector such as yourself, these limitations won't be important, for most people today they most certainly would be. If one is spending $150.00, a Sony ICF-SW7600GR (which features a sync circuit) and a suitable antenna in absolute terms will run rings around the Hallicrafters, audio quality excepted.

By the way, years ago, I always thought that Hallicrafters radios were really good ones, right up there with Hammarlund models (though, like everything else, "shy" of the Collinses). They were well-designed and very rugged. In their respective classes, they were also the best-looking SW radios on the market at that time.

Best,

Joe

That's far from happening, though, in reality.
Steve Wingate will never be placed in custody for getting drunk and
acting like a fool on amateur radio while he still is a legally
licensed ham. Even after license revocation, it'd take quite some time
for anything of the "in custody" nature to materialize if ever.

Quite good. I usually need to narrow the passband by ''tuning away''
from the Synchronous sideband selected by about 1500Hz. This fattens
the signal up a lot. The R75 in SSB mode is quite good, too.

Get the R-75. You will have more control over the passband and have more features that are useful. The SW-2, however, is still a credible receiver on MW.

The front end is prone to failure (static damage?), but it is repairable. The battery holder is a bit loose, but the memory failure problems that results can be fixed by putting a capacitor across the power supply.

Whatever. I bought a 30 amp Astron to go with my HF rigs because I
wanted to run a VHF rig as well. I would have purchased a 50 amp if
the price difference would not have been so much.

Not much into country of any sort. I've never heard anything quite
like that coaxed out of a fiddle before and the combination of that
and a slightly husky female voice turning an old and somedwhat tedious
song into something strange and new pushed all the right buttons.
Perhaps I should have mentioned that the last song to affect me that
way was Michael Hurley's " Hog of the Forsaken". Who knows, maybe I am
developing an affinity for weird country music.
>>Unfortunatly, at

Basic. Solid performance. Great audio. It's totally devoid of BS, no frills. Turn it on, it works. Well. Sensitivity is on par with most rigs of its size, but raw sensitivity isn't going to be as important as selectivity and the ability to pull a signal out of the noise. Which, on the MW bands will be considerable. It will work well on very nearly any antenna you connect to it. If space is at a premium where you are, it works well on a shorter antenna.

It could use a narrower filter for deep DXing on crowded bands, but you'll be surprised at how well it does in its native form.

Could use a tone control. But that's just me.

One caveat...the output floats. That is, it's not referred to ground, and if accidentally taken to ground while connecting to another implement you'll blow the outputs.

I bought one on the recommendation of a friend, expecting good, but nothing to write home about. I was quite surprised. Listenability is very high. Long term listening fatigue is quite low, and it allows me to hear signals that even the car radio has trouble with.

If you're comparing it to another rig, you'll only have to weigh features, because SW-2 does not want for performance.

If you look carefully at his photo, you can see his Tonka Toys on a
shelf to the right. You can also see the basement window near the top
of the wall.

Sitting in a basement and playing with Tonka Toys seems like something
that an almost-40 man should have outgrown by now.

.','

Soon now, Todd will upgrade to blow-up dolls. He's still searching for a
male blowup that looks like his hero, Woger. He needs to find one that is
Vaseline resistant and that can take a licking and keep on ticking.

The doll has to be silent, though. No "moaner" for him. He wouldn't want his
parents to hear him humping away and run the risk of waking them.

I have aa palstar R30CC (Collins filter)that is very "portable" with base performance. It doesn't haavw thebells andwhistles for the R75 but using it with a yoyo
antena it makes a great outdoor receiver.The Palstar hold 10AA batteries insde the case. It is very comparable ti the R*B wen used in a base situation. Great audio no synge but the switchable AGC does a good job. Oncve you set up thememories its easy to go from band to band. I can listen to WABCin New York most of the day (200 miles with no problem. I'm in maryland , East of Baltimore right near the Chesapeake.

The R300CC is light and easy to setup when you're travelling

This, of course, relies on the "state of the art" technique
of predictive noise cancellation.

With this, the system detects the impending noise and
generate an exactly matching negative noise signal to cancel
it. That is why matching the impendence is so critical.
Using the wrong impendence will actually cause a mismatch in
the time-domain.

Actually, this use of impendence matching techniques in
electronics has gone of for years. I have what I believe was
designed as an impendence-matching modem on the end of some
fairly long transmission lines across Dartmoor. This can
sense the imminent arrival of a critical email and drop the
system from Showtime before it arrives.

I believe that Zaphod* has/had/will have a pair of
sunglasses that use the same technology.

Well, I do have a homebrew IF-stage (455 kHz) and a downkonverter to 12 kHz
from Sat-Schneider. I also have a very simple front end and an oscillator
that's far from stable with a lot of harmonics... This stuff actually work
for AM but it's too unstable for SSB and the IF-filter is too narrow for
DRM.

"shu" <washu@hiwaay.net> wrote:
>Twisted pairs eliminate noise because the amplifier/reciever on both ends
>have matching impendence.. that is to say both ends of the cable are
>balanced

No that is not what eliminates noise and that is not what
"balance" means.

Both ends are _balanced_ _to_ _ground_, and each receiver has a
"differential input" circuit. Which is to say the input is the
voltage *between* the two wires, rather than the voltage between
ground and the wire. Almost all noise is between the wire and
ground and if the two wires are really well balanced there will
be no differential voltage due to noise, and hence no noise
voltage will be seen by the input. That is called "common mode
rejection". (Do a web search on it.)

The "balance" of the two wires is improved vastly by twisting
them. That assures that any electrical field which induces a
voltage into one of them will induce and equal voltage into the
other one. (If the wires are not twisted the one nearest to a
noise source will have a higher voltage.) The higher the
frequency, the more twist required to be effective.

Coax is a single ended circuit, with the receiver looking for a
voltage difference between the center conductor and ground. The
outer shield attempts to prevent noise from being induced into
the center conductor.

>in audio and video applications it's very rare that both ends will be
>balanced, a twisted pair is generally bad choice for wiring audio and video.

Almost all audio uses unshielded twisted pair wiring. Think
about the millions of miles of telephone cables!

Video is a mixed bag, as both twisted pair and coax are used in
different circumstances. Most video that you'll notice is coax.

>In computer networks they work very well because the network cards/devices
>all have the exact same impendence, and the noise is canceled out. If the
>impendence is NOT the same, then the twisted pair does nothing to sheild
>away noise.

That isn't true in any way shape or form. (Actually there is a
good bit of variation in the impedance of computer network
devices.) The requirement is that each of the two wires has the

same impedance to ground. It makes relatively little difference
what that impedance is, or what the impedance of the line is
from end to end. In fact twisted pair cable impedances are
often listed, but for some specific set of parameters that in
practice will not be what is experienced.

>a normal coax cable consists of an inner conductor, a dielectric, and an
>outer conductor, and a jacket.. these are also known as "transmission"
>cables, if you dont' use the right coax cable (ie matching impendence) you
>can have a lot of loss... ie 50ohm coax on a 75 ohm system, or 75 ohm coax
>on a 50 ohm system

All of the above is equally true for twisted pair transmission
lines. Note however that there will *not* be "a lot of loss"
from mixing 50 and 75 ohm coax. It will actually be a very
small loss. (There are other factors that are much more
significant, but that gets more complicated than I'm going to
get in this article. Certainly if someone wants to discuss it,
we can and there will probably be a number of people who can
describe it in detail.)

>if you had a lot of loss, you probably could have just as well used a normal
>Shielded cable and not get the loss.. a shielded cable consists of an
>innerconductor, an insulator, and an EM sheild

That describes coax.

There are such things as shielded twisted pair transmission
lines. Shielding increases the loss (by significant amounts at
higher frequencies) and is therefore not often used.

>if your twisted pair video system worked really well, then it was because
>both ends were balanced (quite possible) , or you dont' have a lot of EM
>noise around,

Generally it is the lack of noise sources that allow poor
implementations to work. Unfortunately they then fail as soon
as someone installs a noise source in close proximity.

I just caught the very end of a broadcast from Radio Rhino Interntional on 17870, which I believe is broadcast from Cologne, Germany. I heard something about the possibility of their shutting down their operations, but I tuned in too late to get any details. I decided to check their website (http://www.radiorhino.org/) and the first thing I saw was an announcement that "due to unpaid bills" they'd be shutting down in December of this year--although it does say that listeners can perhaps save them by donating.

>
> Weird, huh? Has anyone else experienced anything like this?

That's a very surprising observation because the Drake R8B has a metal
case and front panel. The only way for something to affect the Drake
meter by proximity is through the meter face.

The HF-150 has an external power supply so that can't be the problem.
Chances are the HF-150 is generating some RFI from a local oscillator
that is coming in through the meter face and dampening the meter
movement.

Maybe you can put the HF-150 to the right of the Drake otherwise you
will have to keep them separated by some distance, which probably a
better idea.

Former Canadian Minister Of Defence Asks Canadian Parliament Asked To Hold Hearings On Relations With Alien "ET" Civilizations

On September 25, 2005, in a startling speech at the University of Toronto that caught the attention of mainstream newspapers and magazines, Paul Hellyer, Canada's Defence Minister from 1963-67 under Nobel Peace Prize Laureate Prime Minister Lester Pearson, publicly stated: "UFOs, are as real as the airplanes that fly over your head."

Mr. Hellyer went on to say, "I'm so concerned about what the consequences might be of starting an intergalactic war, that I just think I had to say something."

Hellyer revealed, "The secrecy involved in all matters pertaining to the Roswell incident was unparalled. The classification was, from the outset, above top secret, so the vast majority of U.S. officials and politicians, let alone a mere allied minister of defence, were never in-the-loop."

Hellyer warned, "The United States military are preparing weapons which could be used against the aliens, and they could get us into an intergalactic war without us ever having any warning. He stated, "The Bush administration has finally agreed to let the military build a forward base on the moon, which will put them in a better position to keep track of the goings and comings of the visitors from space, and to shoot at them, if they so decide."

Hellyer's speech ended with a standing ovation. He said, "The time has come to lift the veil of secrecy, and let the truth emerge, so there can be a real and informed debate, about one of the most important problems facing our planet today."

Three Non-governmental organizations took Hellyer's words to heart, and approached Canada's Parliament in Ottawa, Canada's capital, to hold public hearings on a possible ET presence, and what Canada should do. The Canadian Senate, which is an appointed body, has held objective, well-regarded hearings and issued reports on controversial issues such as same-sex marriage and medical marijuana...
...
"There should be an uncompromising commitment to preventing the placement of weapons in space."
...
[That's the real motive. This has nothing to do with ET. Better hold talks with the Kommunist Chinese space program - they are on full throttle to space weapons! These are the "ET's" the Canadien Left-Wing MoonBats are trying to protect.]

> > > receivers just plug into the wall...

Price is not a the factor to look at, it's the type that counts. You
want a linear supply not a switching supply. In addition you want the
linear supply to have by passed rectifiers. One thing to look for is to
see if the supply has a ground pin on the AC power plug. Having that
ground pin means it could have better front end filtering.

Occasionally when tuning through the short-wave bands, I'll find a carrier signal that pegs my s-meter but there is absolute dead silence in terms of voice, code, etc. Sometimes it lasts for hours, sometimes it goes away rather quickly.

Or a TV set or other video gear (3.5785 MHz, 7.159 MHz, etc). Or any
microprocessor controled home appliance. These are often on 1 1MHz
multiples, or on TV color burst frequencies, (3.5975 MHz or multiples
for US), because the resonators/crystals are cheap. Or computer gear.
Or your neighbor's pickup truck's engine controller. Or an internal spur
in your receiver.

7159 is a problem for me, as 7160 is the BBC frequency for 16:00-18:00
for the North Pacific area.

well, they have to have the same impedance and be balanced

heh.
Telephone Aside....
if you're setting up speaker systems, or amplifier systems.. stereo's etc..
it'll be rare that any of it matches up perfectly so that a twisted pair is
the best choice for wiring.

>

You're Nit picking, or misunderstanding
The network cards and Devices have to have the same impendance, OF course it
is with Regard to the wire and ground what ELSE would it be in regard to?
Nor did I ever say that the Actual impedance along the wire is important, My
whole point is that the Noise cancellation Occurs AT the cards themselves
which all have the exact same impedance (TO GROUND) Regardless of the wire's
impedance (which ideally should be as LOW as possible)

no no no..
. a "coax" cable has a Dielectric between the outer conductor and the inner
conductor and THEN on top of that there MAY or MAY NOT be a shield,
a normal.. like "rca* type cable has NO dielectric, and No outer conductor.
it just has an Innner conductor. and Insulator (not a dielectric) and a
Shield

a Coax is designed to transmit over long distances, a "rca" type cable is
design to just be shielded and for short use

Given the strong signal noted, that seems more likely. Or something nearby
has an oscillator that is being picked up.

I seem to recall paging signals in the 30-50MHz just leaving a carrier
on decades ago (when I had an SP-600 to tune the range, and I assume
before paging got fancier and moved higher in frequency), but I knew
those were pagers because every so often there would be some message.

But on the shortwave bands, most people won't be near transmitters
to get really strong signals. And an unmodulated signal would be
even less likely.

** A pair of parallel wires that are is not twisted is simply a long loop.
Any nearby alternating magnetic filed (ie like AC hum) will inject a small
voltage into that loop. If the wires are spread apart, the loop area
increases and so too does the injected voltage level.

Also, the phase of an injected voltage in a loop reverses if the loop is
rotated through 180 degrees - same as reversing the two connections at the
receiving amp end.

Now, if half a loop is rotated through 180 degrees and the other half is
not, then voltages induced in each half are in antiphase. If equal in
magnitude they will cancel each other.

So, by having many twists in a pair of signal carrying wires one maximises
the chance of cancellation in the general case - ie it *prevents* the
pair of wires acting like a loop receiver.

The two conductors in a balanced microphone cable are twisted quite tightly
for this reason.

> Coax is a single ended circuit, with the receiver looking for a
> voltage difference between the center conductor and ground. The
> outer shield attempts to prevent noise from being induced into
> the center conductor.

** True - but the surprising thing about co-axial cable is that it does
NOT act like a loop.

A co-axial cable suffers (ideally) no voltage injection from a nearby
alternating magnetic field.

Since the outer conductor shields against external electric fields entering
the cable co-ax is largely immune from EM interference - making it ideal
for many wide band applications, 75 ohm video being one.

The *balance* is in regard to "wire to ground". But the circuit
impedance is between the two wires, not to ground.

>Nor did I ever say that the Actual impedance along the wire is important, My
>whole point is that the Noise cancellation Occurs AT the cards themselves
>which all have the exact same impedance (TO GROUND) Regardless of the wire's
>impedance (which ideally should be as LOW as possible)

They don't all have the exact same impedance to ground. The two
wires on any given device have similar characteristics relative
to ground (resistance and reactance), but between any two
devices those characteristics might be (and commonly are)
significantly different.

And *NO* the wire's impedance is not as low as possible.
Typically a twisted pair has a characteristic impedance of about
100-200 ohms, if it is short. The impedance can be
significantly higher if the cable is longer.

However, most telephone cable is intended to have a
characteristic impedance between 900 and 2000 ohms!

Note that the lowest typical impedance for twisted pair is
higher than that of commonly used coaxial cable, which is
usually less than 100 ohms.

...

>a normal.. like "rca* type cable has NO dielectric, and No outer conductor.
>it just has an Innner conductor. and Insulator (not a dielectric) and a
>Shield

You need to do some research. That "shield" which is on "top"
of the outer conductor is *part* of the outer conductor in
almost all cases. (I can't think of one where it isn't.) Low
cost coax is of course single shielded, and the double (or more)
shielded coax is both more expensive and of higher quality as a
transmission line.

Cables that use "RCA" connectors are in fact coax cables. Some
of them are *extremely* cheap, and have an outer conductor that
has very little area. But yes it is there. On the cheapest
ones, if you cut the cable open what you'll find is that the
outer conductor looks just like a multi-stranded wire that has
very little twist.

Also note that *any* insulator is a dielectric... and *any*
"shield" is in fact the outer conductor of a coax cable.

>a Coax is designed to transmit over long distances, a "rca" type cable is
>design to just be shielded and for short use

Coax is no more, or less, designed for long distances than it is
for short distances. It has been used for both, though it is
commonly more often seen in short applications than long, but
again that depends on your perception of "short" vs. "long" too!

We probably should note that flat untwisted wires are, just like twisted pair, a *balanced* transmission line. In fact they are virtually identical! The flat line is twisted pair with zero twist, that's all.

(Of course in the case of speaker wire, that is not significant at all. The impedance is very low and the power levels are very high, hence the SNR is always going to be *very* high, even in a very hostile environment.)

>> Ah! that Reminds Me - {Note to Self :o}

>http://www.installer.com/tech/cat5.html

That is certainly an interesting URL. Unfortunately it is very poorly stated, though almost 100% correct (and only one interesting nit pick about something that is not quite "correct"). I can see where you are being confused by what it says, for example, because many of the things you've said that are absolutely incorrect appear to be supported by the way he presents his information. But what he actually means is not what you are taking it for. (I won't go into it here, because it is all in the other two articles I've posted.)

However, as a brain teaser, I'll point one technical error on that web page. This is not a serious criticism, because this is *way* over the heads of his intended audience, and I would not have mentioned this either if I were writing that article. (I would word it a little differently though... as you will see.)

But when I talked to the computer experts that were familiar with this noise cancellation phenomenon, I

realized not many except the real gurus realized the
cancellation occurred in the balanced line receiver
and NOT the cable itself!

Again, its NOT the twisted pair cable that gets rid of
noise, its the balanced recievers! IN FACT, the
balanced line twisted pair wires are NOT shielded so
that BOTH wires get equal noise, so the noise (if
equal) will be cancelled out!

In fact, for most but not for all twisted pair cables that is
true. The exception is interesting though. For long telephone
feeder cables, those that are more than a few hundreds of feet
long, a typical cable is laid in sections, for example 3000'
feet long. At each splice box the shield that surrounds the
entire cable (which might have anything from 25 to maybe 600 or
even more twisted cable pairs) is grounded very carefully, and
is bonded to the next section.

That has the effect of canceling noise in each and every pair.
(Not by shielding it either, but by cancellation.) But before I
describe how that works, let me point out that the exact same
effect can be had by grounding all unused pairs at both ends!
(Clearly _that_ is not an effect of shielding!) Of course that
works well only if there are many spare pairs...

So, the question then is just how does that cancel noise in the
twisted pair conductors that make up a multi-pair cable?

Any noise source will generate an electrical field that causes a
voltage and a current to appear on a conductor. If there is
good continuity, the voltage will be low and the current will be
high. With poor continuity the opposite is true. Also the
potential is directly related to the area (i.e., the size) of
the conductor. Hence many pairs tied together, or the outer
shield, will have more potential than a single smaller
conductor. And by grounding the shield (and maybe all spare
pairs too) at both ends we cause the *greatest* amount of
possible current to flow from any given noise source that is
causing induction. Typically each pair that is in use will be
terminated in an impedance somewhere between 100 and 1200 Ohms,
so compared to the directly grounded shield and conductors there
will be much less noise current in the used pairs.

Okay? Now comes the fun part. The large noise current in the
grounded conductors causes an equal and opposite potential to be
induced into each of the other pairs! It therefore cancels some
of the induction directly from the noise source.

Hence, while it is commonly the case that most of the noise is
canceled by common mode rejection at the balanced receiver,
that is not the only noise reduction mechanism for twisted pair

cables.

Read what i said again
Ideally you *want* the impedance to be as LOW as possible
i didn't say the Impedance WAS low relative to coax, nor did i imply that...

A twisted pair typically has an impedance of 100-200 Ohms yes
the impedance on longer cables is there Simply because the cables are Longer
this isn't a GOOD thing.. you WANT it to be as LOW as possible

are you channeling Cliff?

no no no no you're ignorant
here
http://www.westpenn-cdt.com/pdfs/T176o177.pdf
this is how Every single Coax cable iv'e seen is made
and RCA cable. does NOT have the dielectric
and the outer conductor is NOT the same as the outer shielding
the Outer shield is braided to spefically lessen outside interference,
it is entirly irrelevent that the outerconductor touches the shielding
the outer conductor however is NOT braided. it is designed to react to the
pulses between the inner conductor and the dielectric (read Capacitor) AS
well as aid in shielding.. YES it can do both.
because of this interaction it allows the Pulses to transmit further with
less impedance then a simple wire
the Speed of the transmission is signficantly less then the speed of light,
and can be calculated out by knowing the dielectric constant of the
dielectric
because of this if the impedances dont' match.. you can get Echos
(reflections) and actually notice them, on a VERY long cable.. like this
mile length cable. i'm doubtfull you would notice relfections because it's
just too damn long.. it require TWO bounces to notice reflected images,...
in a real long cable. some of the signal will be reflected back, . and then
reflected again at the other end, but by that time it's too out of phase,
and too weak to produce much in the way of ghosting. instead it looks like a
simple signal loss. you can however have Very noticable ghosting on shorter
cables if the impedance is mismatched

the Insulator in a SIMPLE rca type cable is no where near the quality of the
dielectric compounds used in coax cables, and hence has little if any
effect, and also the Shielded part of the RCA cable does NOT behave like the
outer conductor in a coax, . the shield is again braided and absorbs signals
if there is an outerconductor it's simply there to help shield, as you want
a Foil type shield and a braided shield, but again it doesnt' beheave anyway
like a coax because of the lack of a decent dielectric
in short.. RCA cables are absolutely not like Coax cables.. you're just
wrong.

>
> >a Coax is designed to transmit over long distances, a "rca" type cable is

> commonly more often seen in short applications than long, but
> again that depends on your perception of "short" vs. "long" too!

coax cables are spefically designed for long range transmissions with
miniumal loss
by long.. i mean Longer then a simple insulated , or simple shielded wire

can transmit

Balanced systems are generally better than unbalanced systems in audio applications, especially if there is any audio frequency potential difference between the signal grounds of two pieces of connected equipment, otherwise known as common mode interference. Well balanced systems reject common mode interference; unbalanced systems consider it as part of the signal.

Balanced systems necessarily use two conductors floating with respect to ground and to maintain balance the conductors need to be identical and symmetrical in their relationship to the world around them - twisting helps assure that. Unbalanced systems can work with one conductor and the earth as the return conductor but a second conductor is normally used to assure the return path has a low resistance.

Shielding is applied to both single conductor, unbalanced wiring and twin conductor, balanced wiring to reduce the coupling of higher frequency EMI into the conductors. Systems that are balanced at audio frequencies may become imbalanced at higher frequencies and input amplifiers of imbalanced systems may rectify/detect/demodulate induced signals just as the input amplifier of an unbalanced system. Hence shielded twisted pair for balanced systems and the shielded single conductor you describe as 'rca' for unbalanced systems.

These copper or aluminum foil shields are ineffective at power line frequency where the interference is due to magnetic coupling. Hence the common practice of running critical audio cabling, even shielded twisted pair, in steel conduit.

While some may use twisted pair cable in unbalanced systems, one of the conductors is connected to equipment grounds at both ends, just as the shield would be, but does not shield as effectively as a complete braid or foil shield does, and contributes nothing toward common mode rejection.

>> Video is a mixed bag, as both twisted pair and coax are used in
>> different circumstances. Most video that you'll notice is coax.

I used "Twinaxial" cable for a mile long analog video run in the Arctic where 'ground' is a myth. The common mode interference at 60 Hz was so high that a clamping amplifier had to be used in addition to a balanced equalising amplifier and still there was a noticeable hum bar.

> You're Nit picking, or misunderstanding

On high speed data networks as in video systems, the receiving devices must have an input impedance close to that of the cable feeding them, in order to minimise reflections (echoes, ghosts). A match at the sending device also helps in this regard. Maximum power transfer is not the reason for matching in these applications; minimal distortion of the pulse waveform is.

Noise rejection could care less about the match between the cable and the receivers. All that is required for common mode rejection is that the two receivers match each other in every respect and that the two conductors match each other.

> no no no..

> it just has an Innner conductor. and Insulator (not a dielectric) and a
> Shield

Sorry, 'rca' cable as you describe it is co-axial but not precisely co-axial. Any insulator is a dielectric (has a dielectric constant, a ratio with respect to air). All that co-axial means is that there are two things sharing a common axis, one enclosing the other. Their cross-sections may be completely different - the inner could be square, and the outer triangular. Co-axial cable impedance is determined by the ratio of the diameters and the dielectric constant of the insulator(s) between them. Precision co-axial cable has a uniform impedance along its length, i.e., the centering, diameters and dielectric are uniform. So-called 'rca' cable is imprecise co-axial cable. Impedance becomes relevant when the cable length becomes more than a fraction of a wavelength of the signal being transported - the electrical wavelength at audio frequencies is very large.

> a Coax is designed to transmit over long distances, a "rca" type cable is
> design to just be shielded and for short use

Low loss co-axial cable is needed for long distances and may need to be precise for certain applications. Lossy, imprecise co-axial cable is good enough for lower frequencies and shorter distances.

>> There are such things as shielded twisted pair transmission
>> lines. Shielding increases the loss (by significant amounts at
>> higher frequencies) and is therefore not often used.

Shielding is often used in order to satisfy EMC requirements, i.e., potential interference to radio systems in addition to self-protection. Note that CAT6 shielded cable is used in critical Gigabit Ethernet installations.

if you re-do his test with a piece of what you consider to be "proper"
coax cable (eg RG174) you will see it behaves much the same as the RCA
cable. Actually I would expect to see less noise than the RCA, as the
braid on "proper" coax has pretty good coverage.

STP would give similar results to the RCA cable too.

If only he knew what he was actually measuring....

Cheers
Terry

That is fascinating, but is not the way that twisted pair
transmission line works. A pair of parallel wires would have
exactly the same conditions. That is simply because the
distance between the centers of the conductors is very short
compared to a wavelength.

>The two conductors in a balanced microphone cable are twisted quite tightly
>for this reason.

Typically they are not twisted quite tightly, compared to
typical twisted pair used in the HF range.

Why is that surprising? Of course if you make the distance
between the center conductor and the outer conductor large
enough... just as with parallel wires it no longer acts like
a transmission line.

>A co-axial cable suffers (ideally) no voltage injection from a nearby

Ahem... you were doing fine until that last line. It is not
particularly ideal for wide band applications as opposed to
parallel conductor transmission line, which of course is even
better as far as wide band goes...

The coaxial cable offers nearly no immunity from power line and other
low frequency magnetic fields, the shield is not thick enough.

** Seeing as co-ax operates near ideally from DC up to GHz you are wrong
again.

No, you want the impedence to be matched to the load, otherwise you get
reflections. You're confusing impedence with resistance I think.

That's not a "very long cable". TPC-1 is a "very long cable".

> i'm doubtfull you would notice relfections because it's
> just too damn long..

Tell that to AT&T.

> it require TWO bounces to notice reflected images,...

There is no such thing as an "RCA Cable" as distinct from a coaxial cable.
You can put RCA connectors on non-coaxial cables or on coaxial, depending
on the application.

>> >a Coax is designed to transmit over long distances, a "rca" type cable

Actually, coaxial cable is designed for the most part for RF applications.
For long range communication fiber is used today.

4272. OT Lyn Nofziger (Former Top Reagan Aide) Tears Current GOP A New One

Newsgroup: rec.radio.shortwave
Date: 2005-11-26 02:43:02 UTC
From: David <rickets@knac.com>
Message-ID: <5rifo1l48p438s4lb8p33l51vuauq2a86u@4ax.com>
Source record: 51123

Off the reservation: Lyn Nofziger has been a fixture in Republican Party politics since the 1960ï¿½s. He worked on Ronald Reaganï¿½s first campaign for governor of California, and briefly in the Reagan White House. He also ran campaigns for Pat Buchanan and Steve Forbes.

But now Nofziger is speaking out - in the ultra-rightwing Washington Times (www.washtimes.com) - on the current state of affairs in the GOP, and what he has to say is not pretty:

On the current leadership of the Republican Party:

ï¿½Theyï¿½ve been in power too long ï¿½ Any time you put any political party in power for too long, it becomes corrupt. It loses its focus. It forgets why it came there.ï¿½
On the ï¿½conservativeï¿½ label:

ï¿½ï¿½Conservativeï¿½ is a word that doesnï¿½t mean anything. It can mean what you want it to mean ï¿½ To me, conservative means believing in a minimum amount of government and a maximum amount of freedom ï¿½ and keeping government out of peopleï¿½s lives and business ï¿½ and leaving people alone ï¿½ I recognize you have to have national defense and have to finance the government. But government does not have to be the be-all and end-all.ï¿½
On Ronald Reagan:

ï¿½Our problem is we are trying to make a saint out of a man who certainly wasnï¿½t perfect. But he was a unique president. He believed in three things: God, the American people and himself. And thatï¿½s kind of unique.ï¿½
On Bush family consigliere James Baker:

ï¿½You [could] split [the Reagan] senior staff into two parties: the Reagan people and the Baker people ï¿½ [Baker is] a guy whoï¿½s arrogant, who thought he knew better than the president ï¿½ I donï¿½t think heï¿½s an honorable man. And you can quote me.ï¿½
On Pat Buchanan:

ï¿½A friend of mine. But I donï¿½t think Pat is as libertarian as I am. I donï¿½t think he wants more government; he just wants different government. ï¿½ Heï¿½s a protectionist.ï¿½
On the neo-conservative efforts to spread democracy by force:

ï¿½Iï¿½m not a great believer in spreading democracy, because I donï¿½t think you can spread democracy. People have to want it themselves.ï¿½

Twisting wires helps reduce noise induced from ambient H fields. If you have a high ambient E field, you can still get common mode noise coupled to a bare twisted pair. Particularly on a high impedance circuit. This becomes a problem at low signal levels, where a CMRR sufficient to reject the noise may be impractical. Low signal level circuits are where one finds high impedances as well. In this case, carefully designed shielding can help.

4281. Longwave propagation good tonight!

Newsgroup: rec.radio.shortwave
Date: 2005-11-26 06:25:53 UTC
From: fcathell@msn.com
Message-ID: <1132986353.573001.237280@g14g2000cwa.googlegroups.com>
Source record: 51131

The propagation on LW is pretty good tonight. There have been broadcast stations on 153, 162, 171, 180 and 189 kHz with signals up and down with slow QSB for the past 1.5 hours. The station on 180 kHz is the strongest but the signals are still too weak to determine the language. I also copied NDB "DIW" on 198 kHz in Dixon, NC, and Lowfer "PLI" on 183.5 kHz from the LA area. Receiver was an R75 with a 33 meter "long wire" and a passive preselector that will tune LW. This has never been a very good LW antenna so propagation was quite good. I hope to have my L-400B LW active whip repaired by next weekend so reception should improve.

Randy,

AM/MW Loop Antennas : Crane Twin Coil -v- Palomar -v- Quantum "QX"
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6689
http://groups.yahoo.com/group/kenwood-r5000/message/1482

The C. Crane AM/MW Twin Coil Ferrite Rod Antenna is for
MW 'Only' and IMHO is a Good Signal Magnet for Locations
where AM/MW Reception is poor or difficult.

The Palomar Loop Antenna using the AM/MW Loop Head
is equal to or better then the Crane; and offers a
variety of Loop Heads to cover the LW, MW and SW Bands.
http://www.universal-radio.com/catalog/sw_ant/0445.html

Better than both the Palomar and Crane is the Quantum
"QX" Ferrite Rod AM/MW Loop Antenna by Radio Plus+
QX LOOP => http://dxtools.com/QX.htm
PRODUCTS => http://dxtools.com/PRODUCTS.htm
DX TOOLS => http://dxtools.com/index.html
FWIW - The Quantum "QX" Loop Antenna IMHO simply
has more features to do the job of AM/MW DXing.

For One and All - Everyone,

Which if these AM/MW Loop Antennas do you use
* Crane Twin Coil
* Palomar
* Quantum "QX"
and WHY ? Do You Like It ?

4288. Best SWL RCVR to buy?

Newsgroup: rec.radio.shortwave
Date: 2005-11-26 09:14:28 UTC
From: OregonMike <OregonMike@gmail.com>
Message-ID: <1132996468.047290.186570@g47g2000cwa.googlegroups.com>
Source record: 51138

I'm planning to buy a new rcvr and would love some input on the current
scene.
Things that pop into my mind that are a must are

(1) SSB/CW reception
(2) Freq. read out (LCD or whatever)
(3) External antenna support
(4) High sensitiviy and selectivity

I haven't looked at SWL RCVRs in some time and don't really know much
of what's best to get with the ones I'm seeing available to buy online.
I'm not even keen on where the best place to buy on is. Any help or
input would be great!

Thanks,

OM

As I pointed out it could be much lower than it commonly is;
hence "as LOW as possible" is not true.

>A twisted pair typically has an impedance of 100-200 Ohms yes
>the impedance on longer cables is there Simply because the cables are Longer
>this isn't a GOOD thing.. you WANT it to be as LOW as possible

And other twisted pair typically has an impedance of 900 or more
Ohms, *by* *design*. It isn't simply because the cable is long.
Indeed, a short length of the same cable has the same impedance
as a long length does. Rather the impedance is designed to be
higher because the cable runs will be longer and since the higher
impedance cable will have lower losses it is more suitable.

>
>no no no no you're ignorant
>here
>http://www.westpenn-cdt.com/pdfs/T176o177.pdf

I would suggest that you find a basic text on transmission line theory. You are looking at perfectly good references, and simply not understanding what they are saying. For example, as I said

any insulator is a dielectric... and *any* "shield" is in fact the outer conductor of a coax cable.

There is nothing in your cited reference which suggests anything different. At least not to anyone who understands the theory of how coax cables actually work. I'm not going to try explaining how the outer conductor (the shield) functions, because it is quite complex. You should do some proper research and learn about it though! On the other hand your misunderstanding of what is a dielectric and what is an insulator is fairly easy to clear up, because it is simply a matter of definitions.

>this is how Every single Coax cable iv'e seen is made
>and RCA cable. does NOT have the dielectric

Of course they have a dielectric.

dielectric:

1. A substance in which an electric field may be
maintained with zero or near-zero power dissipation,
i.e. , the electrical conductivity is zero or near
zero.

Note 1: A dielectric material is an electrical
insulator.

Note 2: In a dielectric, electrons are bound to atoms
and molecules, hence there are few free
electrons.

2. Pertaining to a substance that has a zero or near
zero electrical conductivity.

That is a direct quote from http://www.its.bldrdoc.gov/fs-1037/, which is the Telecommunications: Glossary of Telecommunication

Terms, Federal Standard 1037C.

"Insulator" and "dielectric" are two terms for the same thing.

>and the outer conductor is NOT the same as the outer shielding

It is indeed *precisely* the same physical entity.

>the Outer shield is braided to spefically lessen outside interference,
>it is entirly irrelevent that the outerconductor touches the shielding
>the outer conductor however is NOT braided.

It may not be braided in the particular picture you looked at,
but you really should learn to do more than look at the
pictures. Reading the text you'll find that it describes,

There are basically three types of shielding techniques:
1. Foil Shielding,
2. Braid Shielding,
3. Combination Shielding

The picture of course is of coax constructed with technique 3,
combination shielding. Note that either the foil or the braid
could be removed. They are *both* referred to as "shielding".
That particular document does not use the terminology "outer
conductor", and *all* types of outer conductors are simply
referred to as a "shield".

As with the "insulator" vs. "dielectric", the shield *is* the
outer conductor.

>it is designed to react to the
>pulses between the inner conductor and the dielectric (read Capacitor) AS

If you are saying that dielectric is synonymous with
"capacitor", you are wrong. However, by definition a capacitor
includes an insulator (the dielectric material between the
plates).

>well as aid in shielding.. YES it can do both.
>because of this interaction it allows the Pulses to transmit further with
>less impedance then a simple wire
>the Speed of the transmission is signficantly less then the speed of light,
>and can be calculated out by knowing the dielectric constant of the
>dielectric
>because of this if the impedances dont' match.. you can get Echos
>(reflections) and actually notice them, on a VERY long cable.. like this

Are you saying the these reflections don't exist, or can't be
measured, on anything but "a VERY long cable"? What is your
definition of "VERY long"?

>mile length cable. i'm doubtfull you would notice relfections because it's
>just too damn long.. it require TWO bounces to notice reflected images,...

If you are saying that a "mile length" is a VERY long cable...
I'll point out that it depends on the frequency. And I don't
quite catch what you mean by requiring "TWO bounces".

Actually the impedance mismatch has an effect at each end of the
cable. At the load end there is less power transfered to the
load than would otherwise be expected. At the signal end, the
cable accepts less power than would otherwise be expected.

In the first case some power never does go down the cable, and
if it does exist it necessarily must be dissipated in something
other than the cable or the load at its distant end. In the
second case the power goes down the transmission line, is not
absorbed, and is reflected back to the source.

That usually means that either the signal generator 1) does not
produce as much power as it could, and/or 2) that power is
dissipated as heat in the device feeding the transmission line.
(Which is to say that the efficiency of the device is reduced.)

>in a real long cable. some of the signal will be reflected back, . and then

That is *just* as true in a short cable. The only difference is
that some of the power will be absorbed by the long cable (cable
loss) and will not all end up being dissipated in the source
device.

The significance of the above is that if you do have a 1 mile
long cable, and feed a 100 MHz signal into it, it will make *no*
difference what the load at the end of the cable is! Almost no
power will reach the distant end anyway, and by the time it is
reflected back the loss will be so high that it is insignificant
(for example, if the cable loss is greater than 10 dB, giving 20
dB of loss for a round trip, the VSWR will be something like
less than 1.05 to 1, which of course is very good termination,
even if there is actually no load at all at the distant cable
end).

Of course with a short cable it *will* make a difference...

>reflected again at the other end, but by that time it's too out of phase,

It may or may not be out of phase. That is a function of
frequency, distance, and velocity factor. At some points it
will be out of phase, and at others it will be in phase.

>and too weak to produce much in the way of ghosting. instead it looks like a
>simple signal loss. you can however have Very noticable ghosting on shorter
>cables if the impedance is mismatched

Which is to say that all of the things you just said about LONG
cables have nothing to do with it being long or short.

>the Insulator in a SIMPLE rca type cable is no where near the quality of the
>dielectric compounds used in coax cables, and hence has little if any

>effect,

The lower quality dielectric used in "SIMPLE rca type cable"
will have *more* effect. Of course some cables that use RCA
connectors are of equal quality to the best coax cables (because
they do in fact use the best coax cables).

>and also the Shielded part of the RCA cable does NOT behave like the
>outer conductor in a coax, .

Please find a good textbook on transmission line theory. That
is absolutely not true. A two conductor transmission line using
concentric conductors *is* a coaxial transmission line.

>the shield is again braided and absorbs signals
>if there is an outerconductor it's simply there to help shield, as you want
>a Foil type shield and a braided shield, but again it doesnt' beheave anyway
> like a coax because of the lack of a decent dielectric
>in short.. RCA cables are absolutely not like Coax cables.. you're just
>wrong.

"RCA cables" are virtually *all* made using coax.

>> >a Coax is designed to transmit over long distances, a "rca" type cable is
>> >design to just be shielded and for short use
>>
>> Coax is no more, or less, designed for long distances than it is
>> for short distances. It has been used for both, though it is
>> commonly more often seen in short applications than long, but
>> again that depends on your perception of "short" vs. "long" too!
>
>coax cables are spefically designed for long range transmissions with
>miniumal loss
>by long.. i mean Longer then a simple insulated , or simple shielded wire
>can transmit

Coax has higher losses per unit of distance than do parallel
wire transmission lines. Which is to say that coax cables are
not specifically "designed for long range transmission with
minimal loss". Generally the loss is far to high for anything
that would be called "long range transmission".

Any good text on coax cable will explain if for you. In particular
the typical foil shielded cable is lacking. Copper braid works much
better, but is not effective. Typicall when that is significant the
cable is installed in a steel conduit.

(gotta love texas ..)

Early Morning Shoppers Pepper Sprayed At Beaumont Wal-Mart

(Air Date: 11/25/2005)
Early morning shoppers at Beaumont's Wal-Mart say they were pepper sprayed by an off-duty police officer working security as a large crowd gathered in the electronics department of the store.

"There were some people trying to break thru the crowds because they were throwing up, and couldn`t breathe," said one shopper, Andrenette Davis, "It was pretty bad."

The incident took place on what is often called "Black Friday," a day retailers open their doors early to hundreds, sometimes thousands, looking for early holiday bargains.

Numerous customers inside the store at the time tell KBTV the crowd gathered in the electronics department and some customers began shoving others. Witnesses say a Beaumont police officer - identified b the Beaumont Police Department as Officer Avie Ownby - told the crowd to back up. They say the officer then pulled out his can of pepper spray and sprayed it into the crowd. Sergeant Dean Crooks with the Beaumont Police Department tells KBTV they are investigating the incident, but that they investigate any incident where an officer uses force. He says Officer Ownby is a 20 year veteran of the force.

According to those inside the store, the pepper spray hit adults and children and several employees. One woman says she fell and chipped her tooth on the ground.

"It has no harmful effects," said Sergeant Mike Earney of the Beaumont Police Department, "it focuses your attention from being aggressive to wanting to take care of the problem on yourself."

Several of the customers received medical attention by EMS in the parking lot. None were taken by ambulance to hospitals, but several of the customers told KBTV reporter Lydia Joseph they would drive themselves to area hospitals.

KBTV contacted the store's managers and Wal-Mart's corporate headquarters for comment but we were told the Beaumont Police Department was handling the investigation and that there would be no comment from the company surrounding the incident.

The length of a conductor in the braided shield is quite long
between two points while it may be much shorter with
a foil shield.
Considering the speed of the electrical field in
the conductor ..... and the distances involved ...
but the center conductor is shorter than the conductors in
the braid ...

Good god a'mighty, which comic book did you read that piece of crap in.
You have just written the most compacted wad of horseshit I've ever
read with respect to transmission lines. Get a book, learn some theory
concerning (cables, open wire or co-axial etc.). Then, take a stab at
explaining things.

Have had the radio fo awhile and not really figured the SSB
use on it.
Can someone give a little brief explanation and help in
using the feature.
I read the one paragraph instruction in the manual, and
not sure what sound the ssb broadcast is.
It has a fine tune pot on the side which I have tried and it will tune
stations.

Center the SSB Clarifier control. Tune the 20 Meter Phone bands.
You'll hear ducks quacking. Find a strong one. Turn on SSB mode and
adjust the Clarifier very slowly until you hear natural sounding
voices (as natural as your average Ham gets, anyway). The Clarifier
and the Main Tuning interact, so adjust both if necessary.

http://www.arrl.org/FandES/field/regulations/allocate.html#20

You could also try the Aeronautical HF ATCs. Which aren't as
congested:

For One and All,

Antenna Reception Theory - Message Thread on R.R.A.A.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6692

Here is a Message Thread that appeared on the NewsGroup
Rec.Radio.Amateur.Antenna concerning "Antenna Reception Theory"
QUESTION => http://tinyurl.com/87958

" Hi,

I am looking for an explanation of how an antenna receives
a signal due to the E-field of an electromagnetic wave.

I have looked in some books, and can understand transmission,
but the books I have looked in don't explain reception.

I have found an explanation of how the H-field induces a
signal in a loop antenna: a changing magnetic flux will
induce a current.

But what about the E-field and a dipole antenna? I guess that
the E-field causes electrons to move in the antenna wire,
because in a solid conductor, electrons will move until
the E-field inside the solid is cancelled out?

I have googled but having difficulty finding a good explanation.

Any pointers?

Thanks & regards,
Paul. "

4333. Massachusetts Politician "Disses" Amateur Radio In Televised Town Meeting... Oops!

Newsgroup: rec.radio.shortwave
Date: 2005-11-26 18:19:42 UTC
From: netmanager2@yahoo.com
Message-ID: <dma8vuagi1@xuxa.iecc.com>
Source record: 51083
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.cb,rec.radio.shortwave,rec.radio.broadcasting

Massachusetts Governor Mitt Romney dismissed the role of Amateur Radio operators in emergency communications during a televised "town meeting" program on WCVB's "When Disaster Strikes: Segment Two." The program featured public safety and volunteer organization officials from across Massachusetts among its audience.

Host and moderator Natalie Jacobson asked an increasingly-agitated Governor Romney questions about communications interoperability, and communication without commercial power. Romney was next asked by Jacobson, "...so does it come down to ham radio?..."

The Governor replied in a disgusted tone, "No, we don't need to deal with ham radio operators..."

Embarrassed public safety officials later tried to put in a good word for Amateur Radio. National Weather Service Warning Coordination Meteorologist Glenn Field was prepared to state the importance of Amateur Radio, when Salvation Army Colonel Fred Van Brunt was called upon. Van Brunt remarked about his organization's quest to improve its communications capabilities and how Amateur Radio has aided his organization. "The ham radio situation helps a great deal," he stated.

"I have already written and submitted a letter to the Governor's Office," wrote Eastern MA Section Emergency Coordinator Rob Macedo, KD1CY. "I have also written an email to Natalie Jacobson."

ARRL Section Manager Mike Neilsen, W1MPN, sent a section-wide email to all Eastern MA ARRL members describing the incident along with actions he and his staff were taking to mitigate the situation.

"[Romney's] attitude about us sets an unfortunate tone within the state's executive branch," wrote Neilsen. "As a former military officer, I see this as a failure in leadership. My immediate concern is our working relationship within the [Massachusetts Emergency Management Team] environment." Neilsen intended to address the Governor's comments as "an urgent matter" at a meeting on November 17 with Don Carlton from the Emergency Management Agency.

"I was very disturbed about what the Governor stated on the program," wrote Ron Wood, W1PLW, the section's Public Information Coordinator. "It does show that more work is needed by all hams in the section. It's a great idea to write letters explaining the good we do." Wood is attempting to schedule a meeting with the Governor's office so that EMA ARRL staffers might discuss the matter further.

Tom Kinahan, N1CPE wrote that Governor Romney's comment has made "a PR problem" for Kinahan in his role as MA State RACES Officer.

"I've got a roster of over 150 Amateur Radio operators that support local communities, and those of us that directly support the state government. There are at least double that in terms of people that are actually out there that I don't have formal paperwork on that support Amateur Radio emergency communications in some organized manner... The Governor has said that he 'certainly doesn't need to rely on ham radio' -- where does that leave the RACES program now?"

Actually, Sterwart is in Newburgh,N.Y., I know, I live a few miles
north of it. That plane passed only about 2 miles west of my house. I
came to realise this after I got home from work and saw the flight maps
on the news reports. If I had been home and looking west I would have no
doubt watched that plane go down the Hudson. I would of thought it odd
too seeing as though commercial flights don't take a route like that,
helicopters do all the time but not commercial flights. The commercial
flights usually travel diagonally across our area and C5A's fly over
here all the time and sometimes VERY low, those come from Stewart.

I saw a plane fly over my house today, it freaked me out seeing as
though there's been no air traffic since Tuesday. I momentarily jumped
when I first heard it coming then watched it fly over. Man this really
messes with your head...

My birthday is 5/4/1958

Electric lines and gas pipes will carry Internet to Illinois town
By Jon Van
Tribune staff reporter

November 26, 2005

PRINCETON, Ill. -- Starting in December this town of 7,500 will begin offering high-speed Internet service over the electrical lines that power the city.

It is among a handful of communities nationwide to plunge into a new technology called broadband over power lines, or BPL, that competes with Internet connections provided by telephone and cable TV operators. Combined with wireless technologies, broadband service delivered over power lines--and perhaps one day even through natural gas pipelines--raises the likelihood that going online anywhere at any time for very low cost will soon be a reality.

The Princeton service, which began testing this spring, is being watched by small communities across Illinois. One member of the Illinois Commerce Commission hopes other towns will experiment with BPL to spread Internet connectivity and drive down costs.

About 15 customers are served by Princeton's BPL test deployment, which demonstrates the service is robust and works well, said Jason Bird, superintendent of Princeton's municipal electric utility.

"From the utility's standpoint, this hasn't been difficult," he said. "The equipment is similar to what we work with every day."

Customers seem to like the service, especially the in-house portability BPL offers. A computer can move from one room to another and go online simply by plugging its modem into any electrical outlet in the house.

"I'm much more active on the Interent now because the speed is much better than with dial-up," said Leslie Lund, who began using BPL in March. "I don't get interference, even when my husband uses his power tools."

The electric line connections get their Internet signals from a 12-mile loop of fiber that Princeton installed last year as a means of attracting industrial development. After one factory left town in 2003 and the manager of another complained about the town's lack of advanced communications infrastructure, the city decided it needed fiber, said Mayor Keith Cain.

"We already had our own electric utility, so that gave us a real advantage," he said. Since the city installed fiber and started testing BPL the local cable and phone operators upgraded their systems and cut service rates, he said.

One downside to Princeton's BPL experience has been an inability to get enough equipment to begin the commercial rollout sooner, Cain said. The town's BPL vendor ran into financial difficulty and stopped producing equipment while it went into reorganization.

Under new ownership, the vendor now says it can ship the products needed for the rollout, said Steve Brust, vice president of Connecting Point Community Centers, the Internet service provider that manages Princeton's broadband service.

"The equipment works fine, but it's proprietary," Brust said. "There are a lot of companies in BPL right now, but there are no standards and no one company dominates the market."

Lack of standards is common with any new technology, said Raymond Blair, vice president for BPL initiatives for IBM Corp. Broadband technologies like Wi-Fi that are based on standards enjoy popularity because the equipment is interoperable and less expensive than proprietary systems.

At least three industry-based committees are working toward BPL standardization, Blair said. The emerging industry should benefit from their work within a year or two, he said.

"The best case for BPL right now lies in creating a smart electrical grid," Blair said. Utilities can spot trouble, read meters, improve efficiencies and generally boost reliability once they install fiber to monitor their grids, he said.

Once BPL standards are in place, equipment costs will drop, making a stronger economic case for offering high-speed Internet to residences, Blair said.

Robert Lieberman, a member of the Illinois Commerce Commission, said the state has $5 million it will award to projects intended to extend Internet connectivity.

There will be another $5 million available next year, and he hopes that some BPL projects will receive a portion of that Digital Divide infrastructure funding.

Also, Lieberman said, the ICC and state lawmakers need to provide incentives to electric utilities to install smart grid equipment that makes BPL to residential customers possible. Texas lawmakers recently adopted such incentives, and legislators in New York are considering doing so, he said.

Power lines aren't the Internet's only new avenue into homes. There's also interest in using natural gas pipelines.

Broadband in gas, or BiG, has been proven to work in concept, although field trials haven't yet been launched, said George West, a senior analyst with West Technology Research Solutions, a market research firm based in Mountain View, Calif.

BiG would rely upon ultra-wideband radio waves traveling through gas pipes to bring Internet to customers. The Federal Communications Commission approved ultra-wideband applications a few years ago but requires they operate at very low power to avoid interference with wireless phones and other appliances.

Pumping ultra-wideband signals along gas lines buried underground would shield them from interference, enabling them to operate at higher power, West said. "BiG has the potential to serve 18 million homes by 2010."

The ICC's Lieberman said he is intrigued by BiG.

"I'd love to see a project with People's Gas or Nicor to test this," he said. "My theory is the more pipes you have to bring the Internet to customers, the better for everyone."

Go to Page 9 (hit P then 9); enter the freq. and push the side button that turns the BFO on and off. You can now use the fine tune pot. For some weird desgn reason you have to be in Page 9 to make the BFO function. The page should also give you 1kHz resolution when tuning digitally.

This is just great! Next they will be offering DSL through the sewer lines. But, then again, this would be redundant!

READ - Common-Mode Noise - by Robert [VA2ERY]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6683

From: "miracleantenna" <w*v*f*rm@*llstr**m.n*t>
Date: Fri Nov 25, 2005 7:35 am
Subject: Common-Mode Noise...

Howdy all...

Consider a balanced feedline. Neither side is ground, so you might refer to one side as - and the other as +.

Assume a dipole feeding such a line has a - and + side too, and it's hooked up to the feedline, - to -, and + to +.

The dipole is not creating a signal in the feedline that's connected to ground anywhere - the signal is strictly the difference between the - and + side of the line. This called a "differential" signal.

Now consider the feedline going into a balun and coming out the other side as an unbalanced signal - now we have a ground-referenced signal to plug into the radio - one connection is "hot", the other is ground. This is called a "single-ended" signal.

Ok so far? Now here's the crux.

A noise signal (lets say from a neighbor's computer) radiates out and is intercepted by the feedline. It hits both sides of the feedline more-or-less at the same time. Since it's the same amplitude and phase on both sides of the line, the signals on both sides cancel out, so the noise is not transmitted to the radio via a difference between the - and + sides of the line.

However - the interference signal can change the overall level of signal on BOTH sides of the line relative to the ground at the radio, thus creating an interfering signal between BOTH sides of the line and ground. This interfering signal is COMMON to both sides of the feedline, and thus referred to as a COMMON-MODE SIGNAL.

A common-mode choke will stop a common-mode signal without affecting the differential signal flowing through it - and that's how (and why) you use them to get rid of common-mode noise.

And a big PS - exactly the same thing can happen on coax, even though the shielding is supposed to prevent it. You can think about that for the mental exercise.

++++++++++++++++++++++++++
I am in the process of cleaning out a store room that is full of junk
for the last 40
years or so. For a very reasonable fee, plus shipping and handling, I
will be glad
to ship the relevent EE text books, plus class notes and tests!, on
Maxwell
theroems. A complete study and mastery of this material will answere
this,
and many other pesky, question(s).

A more practical course might be to take some intro engineering course
at a
community college. The math is, to be kind, hairy, and unless one is a
bright
as Newton or Maxwell, going to prove hard to master on your own.

When ever I try to explain this topic to people without the math
backgroudn I end
up doing a lot of "arm waving".

Terry

I don't know about other areas but
here in NC, our gaslines are plastic.

Even the larger mains are all plastic
pipe.

BPL will loose money bigtime, and
the utilities that go online with it will
siphon money from other ratepayers
to pay for the starup and the shutdown of
bpl.

FINALLY!!

THE TRUTH!

The public has known for a long time how useless ham radio is, not to
mention the low life types who becomes hams. Think I'll have to write a
few letters myself. most of the spectrum 50 mhz and above should be
turned over to commerical interests.

GOOD FOR YOU, GOVERNOR!!

I have the Eton E-1 & think it's great. I can separate fairly well stations as close as 0.1 kHz apart when same strength & as close as 1 kHz apart when 1 is stronger. It has great syncronous detector, LSB/USB & AM with syncronous on or off, passband tuning, frequency readout of 10 Hz with great sounding SSB, 3 selectivities 2.3/4/6, runs on 4 D cells or AC, the sensitivity is 2uv AM, 0.25uv SSB & of course it can take external antennas (all bands) but requires an adapter or 2 for that. Reviews www.radiointel.com as well as in the 2006 Passport. Dealers: Universal Radio, Grove Ent, Sharper Image, Circuit City, JC Penney, J & R, and several others. 1,700 memories, bass & treble, S-1 to S9+60 signal strength meter. I like that I can sit it on my lap as only about 5lbs. Of course others are good, too, but this is my favorite now. It got audio from almost 30 medium wave (AM BCB) stations in Europe, Africa & Middle East here in MN during October, on the whip or the small Radio Shack loop. George S., MN

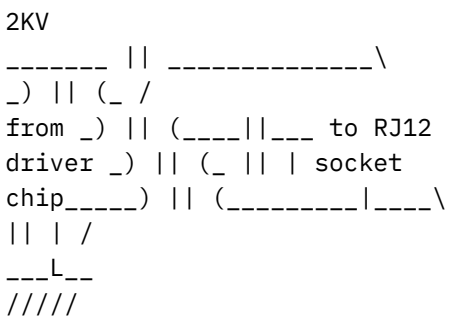
transformers typically have very a high CMRR. this may be whay they are used
in network cards.

taken from an old 10Mb/s card.



I think the capacitor is to reduce the amount of CM noise
transferred capacitatively through the transformer.

AIUI transformers are also often used for balanced microphone leads.

I have the R75

I am dissapointed with it's out of the box performance. It is very distorted and sync doesn't work. I am about to send it off for audio and sync mods. It seems to be well constructed and otherwise easy to operate with nice big display. I hear that the mods will make it work a lot better

I thought at one time that it might give my R8B a good run for money with the mods, but I'm backing off from that kinda thinking. The R8B is a damn nice piece of gear. I actually thought that I might sell the Drake once the ICOM got back with the mods. I'll probably keep both

Go for a R8B if the price isn't a prob. Otherwise maybe R75 with the mods would be a good choice.

Thanks for the reply David. At least I recognize the Icom and Yaesu names :) I have many amateur rigs made by them.

I don't need an "entry level" receiver per se, but if one works well then I'm game for getting one. I started SWL in 1983'ish with an old, analog Radio Shack RCVR and listened since the late 80's with various HF amateur radios. So, 1983 was the last time I had a SWL specific radio! I'm stuck using my Yaesu FT-847 as my SWL RCVR and want something that's portable (battery powered as well as DC in).

George S.

Thanks for the input. I played with BCB DX for a bit here on the left coast and have heard stations from Japan and Malaysia (if memory serves me right) with my Yaesu FT-847 and about a 500 ft. antenna. The FT-847 isn't very portable though and something I wouldn't want to lug around even if I could.

Thanks again,

OM

++++++++++++++++++++++++++
Typical politico or either party.

Hasn't a clue how the states com systems works, get frustrated by the
hard
questions, and lashes out when he should has kept quite. Sadly he will
in all
probability not suffer for his stupidity.

He ought to be ran out of office on a rail.

This attitude is why I no longer participate in ARES, SkyWarn or any
other
activity that has ANY government connection.

PICON be damned.

I have spent enough nights looking for tornados, enough weekends trying
to
"interface" with various government agencies to deliver messages during
floods,
and enough cold days running MDs and nurses around when the snow/ice
shuts
the town down.

Terry

FINALLY!!

THE TRUTH!

The public has known for a long time how useless ham radio is, not to
mention the low life types who becomes hams. Think I'll have to write a
few letters myself. most of the spectrum 50 mhz and above should be
turned over to commerical interests.

GOOD FOR YOU, GOVERNOR!!

Think about it: State: Massachusettes; Politician: Mitt Romney.
Doesn't that say it all? This isn't the first time his head (or
lard-ass Ted Kennedy's head for that matter) has been impacted up his
ass! Why do the people in this state keep electing these bottom
feeders?

My stock R-75 is just fine for what I use it for. I only use the AM
mode in the daytime for local broadcasts. The rest of the time I'm in
SSB mode, listen to MWDX or HFBC.

I have an R8B also, but not next to the bed.

Since this radio is intended for mainland Chinese consumers where SSB
reception by the normal populace is illegal, unless you are a licensed ham,
my guess is that it is an intentionally designed back door "bug".

Somewhere I have a link to a professional design magazine that details
the only comm links to work for 3 or 4 weeks after Katrina were the
ham's.

The NG, FEMA and Corp of Engineers were reduced to using runners
to move messages.

I will dig out the link and post it in the next several days.

Terry

ALL TOP 20 >>

A few months ago, NBC's Tonight Show staged a race between a pair of
ham-radio operators with Morse-code keys and a couple of kids with
text-messaging cellphones to see who could communicate faster. The hams
won hands down, proving, in the minds of some, that old technology
could hold its own against new. In recent days, ham radio was put to
the test again by Hurricane Katrina. This time, however, lives were at
stake.

In the world of design engineers and electronics in general, change is
essential. Designers work diligently to make the fruits of their labors

obsolete almost before they see daylight. The turnover in technology is sometimes like a flood, with old being washed away by new over and over. Often, the new beats the heck out of the old. But there are times when old isn't necessarily bad; in fact, sometimes old works when new doesn't. And then we're glad that old is still around, or at least we should be.

Wireless technology, while relatively new to many consumers, is of course not new at all. A few (very) old-timers remember the original "wireless" of radio. The revolution wrought by the pioneers of wireless changed the world then, and the technology behind that revolution has been re-invented and re-applied time and again. Its pre-eminent incarnation today is our near-ubiquitous wireless communications infrastructure, which has freed us from the shackles of landlines and made our mobile lifestyles possible. Technology truly is great stuff.

Until, of course, a monster hurricane comes along to render it nearly useless. Here we see a scenario in which a flood literally swept away the new. As Hurricane Katrina's fury hammered the Gulf states on August 29, the communications infrastructure took a devastating hit. Telephone service, including wireless, became at first intermittent and then unusable in many localities. Where there was phone service, 911 switchboards were often unreachable due to the massive volume of calls. The response of local authorities, now termed "confused" by deposed FEMA chief Michael Brown, wasn't helping much. The Gulf Coast was about to descend into darkness, chaos, and, worst of all for many, silence.

But proponents of the old were at the ready. The "old," in this case, is ham radio. In the eyes of the "man on the street," ham radio has a pretty stodgy reputation. Aren't hams still using Morse code? Don't some of them use radios with tubes, for goodness sake? What the "man in the street" probably doesn't know is that it was amateurs who advanced the radio arts early in the 20th century. Down through the decades, amateurs have embraced (and often driven) all of the innovations in wireless technology, up to and including all digital modes and the Internet. But many have stayed in touch with their roots, which is good old-fashioned analog HF operation. And while amateurs have a longstanding tradition as innovators and experimenters, they also have a mandate that comes with their licenses: to be ready, willing, and able to provide emergency communications whenever and wherever they're needed.

As Katrina bore down on the Gulf region, amateur radio operators, under the aegis of the American Radio Relay League's (ARRL's) Amateur Radio Emergency Service (ARES), prepared to swing into action with emergency networks that would run health-and-welfare traffic into and out of the disaster zone. As early as the Monday following the storm, hams throughout the hurricane zone were putting emergency stations on the air. In one instance, hams were instrumental in the rescue of 15 people clinging for life to a New Orleans rooftop. Meanwhile, in Alabama, amateur SKYWARN weather nets kept the National Weather Service apprised

of conditions throughout the state. In hard-hit sections of Mississippi, hams running off generators and with makeshift antennas were the only means of communication, getting word to out-of-state friends and relatives concerning their loved ones.

There were numerous other instances of hams helping those who were not simply inconvenienced by the storm, but whose lives were in imminent danger. Now that things have calmed down in the Gulf region, many of the emergency nets have stood down. But hams continue to serve the public in the many areas that are still without power or phone service.

As our nation collects itself in the aftermath of the Katrina disaster, President Bush has promised federal reviews of what went right and what went wrong. One of the findings of those inquiries should be that the federally-instituted Amateur Radio Service, which functions under the licensing authority of the FCC, stood tall when the country needed it.

Amateur radio currently faces various threats to its existence. Chief among those is the advent of broadband-over-powerline (BPL) technology, which, if broadly adopted, has the potential to cause widespread interference to HF communications, not just for amateurs but for other services that use the HF spectrum.

Amateurs and the ARRL have made a lot of noise about BPL, asserting that it could seriously hamper their efforts and those of relief agencies such as the Red Cross and Salvation Army, in the event of a disaster such as Katrina. It's rumored, though, that the same FCC commissioners who have given their blessing to BPL field trials will now take a much harder look at the technical issues concerning BPL and its interference potential in the HF spectrum. Let's face it: The federal government didn't handle the emergency in the Gulf very well; it'd be prudent for it not to sanction a technology that could impede one of the few things that actually worked.

Many readers of this newsletter are amateur radio enthusiasts. If you are, and if you haven't already done so, consider writing your congressman to express your concern about the future of the Amateur Radio Service, especially in light of its outstanding efforts in recent days. Remind your elected representatives that a vibrant and unimpeded Amateur service can and will be a lifesaver when disaster strikes. Also, consider how you yourself might help. What if a hurricane, tornado, or earthquake ravages your area? Are you prepared to get on the air without relying on the mains to handle emergency traffic? Get in touch with your local amateur-radio club and find out how you can pitch in.

Your cell phones and wireless routers are indeed great stuff, but so is a good old HF transceiver. We shouldn't always be in such a hurry to let the flood of new technology wash away the old. The geek down the block with all the antennas on his property could turn out to be your best friend someday. Because sometimes, old trumps new.

You can e-mail David Maliniak at dmaliniak@penton.com.

I agree with David here: if portability is an issue (and you're looking for above average portable performance), then you would be advised to look toward the Eton E1.

You might also look into getting your hands on a used Drake SW8 receiver. It's a significantly bulkier than the Eton. In terms of size and layout, it's much like your average tabletop, but it can be run off 6 D cells and has a handle. Bear in mind that this model, which first came into production in, I believe 1994, underwent some design changes from 1997 (sychronous selectable sideband was added, as opposed to double-sideband synch in the earlier models, and also a pre-amp to the internal whip was added from 1996). I've got one of the earlier and one of the latter. Both are excellent, but clearly the sychronous selectable sideband is a significant performance enhancing feature. The SW8 sounds great for program listening, as well.

Indeed, the R8B is a stellar performer, as are all of the R8 series by Drake. Mr. Oregon might take a look at qth.net classifieds for used Drake R8/R8A/R8B, if eventually opting for a tabletop model.

I'm with dxAce on this one: I swear by Drake receivers. I've at one time owned and used or currently own and use the following from the Drake family: R8, R8A, R8B, SW8 ('94), SW8 ('97). Excellent performance from all, and never a hitch or need for repairs.

The stock Icom R-75 is very nice once you get over the learning curve with the filters and passband. The Synchronous AM is broken so I just use ECSS . The Yaesu FRG-100 is ok but there is nothing great about it. I would love to have a RB8 but I am still tring to find an owner to part with it. I am going to get a 7030+ before AOR throws in the towel and gets out of the market like Drake did.

At that distance you don't even need a 100 watts to elimate their interent completely. The old saying if it causes interference it can be interfered with. I had a leaky cable company amp on the power in front of my rural house. And every time I keyed up on 2 meters everyone up and down the street lost their cable. And they did hear me clear as a bell too, turned out there wasn't anything any government agency would do ecept tell the complainers to call their cable provider. They had it fixed in hours after that. They have no protection from interference on a closed system and had they interferred with my 2 meter station they would have had to shut it down immediately as they are not to interfere outside of their system period.
My neightbour had one of those internal broadband system for distributing interent with in his house over the power lines. I caused him so much grief and it turned out the units where not legal in Canada or the USA. Turned out they were a cheap Chinese copy of a system that was approved but operated in near the 2.4 ghz on a very low level hardwired system. He called to file a complaint and the Industry Canada (Canada's form of the FCC) they wanted the number off the sticker on the back of it and then paid him a visit a couple of days later. I knew the inspectro so he stopped over for a visit and a coffee and told me all about what had happened. It pays to have friends in the right places, hi, hi.
I don't think this BPL is going to make it as the technology is not yet prefected to the point where they will not cause interference on very broad spectrul of the hf, vhf and uhf bands. Motorola has the means and the technology but their system works up in the giga hertz where the bandwidth can be used without interferrring with hardly anything or anyone. Why do you think it's been outlawed in Japan and Austrailia, specially Japan the most advance electronics country in the world. do you honestly think it will last in North Amercia in either country. Do you remember how much of the radio frequency spectrum is assigned to the military, well do you think they will tolerate any kind of interference at all? Not likely and they will make darn sure you don't have the ability to in the future as well.
And then there are the other countries of the globe, it is written that no country shall willingly or unwillingly cause interference with the radio service of another country. Also there is the hf radio broadcast spectrum that is very much a part of the 40 meter band, do you really think they will tolerate interference. It's the bottom line, if the USA and Canada adopt the idea that we can interfere with anyone else, I wonder how long our exportable products will be sold in those countries. Without exports where will our economies go, who's going to be able to afford to pay for an ISP who caused you to loose your job.

Sorry about the long windedness, but this is going to disappear, for one do you really think the airline industry will put up with an ISP interfering

with their comunications, not likely. And that's just one example, there are the police, fire and ambulance, the FBI, CIA, RCMP, FAA the list could go on and on.
Before long those that choose to turn it on will have it shut off more than it's on. And then it becomes a black hole for the investors.
If they can put internet 100 miles outside of Anchorage Alaska, or on Elsmer Island, which is 300 miles south of the North Pole where there are no hydro poles or wires, they can put it anywhere without interfering with anyone.

I'm gone

Aluminum and copper do not make good shielding material for low frequency
magnetic fields. Steel does, and in critical situations coax should be
placed inside a steel conduit. Likewise AC power distribution should also
be run inside steel conduit.

>At least 40dB less sensitive than a non twisted pair (figure 8) cable.

>> Twisting wires helps reduce noise induced from ambient H fields. If you

Of course that is true, but it is true for exactly the reasons that were
stated for why the twist maintains balance: it equalizes proximity.

The exact same noise reduction is available in non-twisted pair if there
is no variation in proximity (i.e., if proximity is to an object that is
a vastly huge distance, the difference between proximity to one wire is
not significantly different than to the other wire). In practice cable
is installed where there are other objects, and sources for interfering
fields are not infinitely distant, so the twists maintain equal proximity
and thus balance.

>> have a high ambient E field, you can still get common mode noise coupled
>> to a bare twisted pair. Particularly on a high impedance circuit. This
>> becomes a problem at low signal levels, where a CMRR sufficient to
>> reject the noise may be impractical. Low signal level circuits are where
>> one finds high impedances as well. In this case, carefully designed
>> shielding can help.

Keeping in mind that typical CMRR for 60 Hz is something like 90
dB.

But that is in fact why microphone cables are often STP. And
instrument data in electrically harsh environments is also
commonly STP. As opposed to typical telephone cable at a customer
location. Note however that a great deal of the cable used at
a telco central office is multi-pair with a shield. And of course
virtually all outside plant feeder cables are also shielded (just not
each individual pair, hence it is not "STP").

>transformers typically have very a high CMRR. this may be whay they are used
>in network cards.

Those are "specially wound" transformers too. They have bifilar
windings to maintain balance, and thus CMRR.

For One and All,

Twin (Paired) Flat-Wires as Noise Cancelling Wire Antenna Elements
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6712

IMHO - Twin (Paired) Flat-Wires [TPFW] (the Un-Twisted kind) can be
put to good use as "Receive Only" Shortwave Listener (SWL) Antennas.

Two very common TPFW Wires to used as Wire Antenna Elements :
Common Speaker Wire and Common 300 Ohm Twin Lead can be
employed as a Low-Noise Antenna Element in several ways :

1. Replace the UnUn and Single Wire of a Random Wire, Inverted
"L" Antenna, Sloper with either of these TPFW Wires. Use a Balun
and Coax Cable and wire one of the two TPFW Wires to one side
of the Balun's Balanced Input and the other Wire to the other side
of the Balun's Balanced Input. At the Far-End of the Two Common
Wires; strip and twist the Wires together and Seal the Connection.

2. With a Dipole or other Balanced Antenna replace the Single Wire
with either of these TPFW Wires. Wire them to the Balun like a
Folded Dipole that is Tapped in the Center of One of the TPFW Wires
with both the End-Wires on each side; strip and twist together and
Seal the Connection.

3. A Vertical Wire Antenna for limited-space (no-space) when
nothing else can be done. Use a Balun and Coax Cable and wire
one of the two TPFW Wires to one side of the Balun's Balanced
Input and the other TPFW Wire to the other side of the Balun's
Balanced Input. At the Top-Far-End of the TPFW Wires; strip
and twist the Wires together and Seal the Connection.

All of the Above can be maked using TV 'type' Parts :

* 300 Ohm Twin Lead {or Speaker Wire} as the Twin Parallel
(Noise Cancelling) Flat Wire Antenna Element.

* TV 300 Ohm Matching Transformer (Balun)

* RG6 or RG59 Coax Cable with "F" Connectors.

NOTE - None of these are great Shortwave Listening (SWL) Antennas :
But they are made of easy to find common TV 'type' parts to build
them and putting them together is simple and understandable for
most Shortwave Listeners (SWL). An Easy-to-Do First Antenna :o)

All are WELCOME and "Invited to Join" the
Shortwave Listener (SWL) Antenna eGroup on YAHOO !

I would consider myself fortunate if I could claim to have owned a Drake SW receiver long enough to have been able to test it to the point where I could find its weak points. Though I haven't owned this radio, I've listened to those owned by friends, and can say that they are pretty much without peer in the SW receiver world at their price level.

I assume from the tone of your post that you had a negative experience with a Drake shortwave receiver?

"Jasen Betts" <jasen@free.net.nospam.nz>

> AIUI transformers are also often used for balanced microphone leads.

** Where a low impedance mic input uses a transformer it almost invariably there for impedance matching.

The pre-amp's electronics may use an audio op-amp that is non ideal for low a impedance sources or even a vacuum tube - in which case the input transformer increases the impedance by 25 to 100 times and greatly improves the signal to noise ratio.

It is rare for a mic cable to suffer from significant CM noise injection - the real problem is *differential mode* injection of hum voltage from nearby AC power cables, particularly ones carrying chopped current waveforms from lighting dimmers.

A special kind of 4 wire twisted (platted really) mic cable was developed years ago to solve this annoyance in TV studios etc - called "Star Quad " mic cable.

The "high energy levels" must mean high voltages.
Electron repulsion does not depend on the energy
of the electrons.

In a high-voltage conductor I doubt that there's much
of a surplus of electrons either .... if there were you'd probably
have a plasma. Only enough to account for the capacitance to
the rest of the universe at that voltage.

Conduction inside the solid works quite well indeed in
many cases. As the outside is conductive it's probably
hard to have an electric field inside (except end-to-end)... think
of why Van de Graf generators work.

But then there's the skin effect .....

If they're all repelling each other, why wouldn't they want to get
away from each other at the surface of the conductor and move
toward the center?

No, but they're all shorted, making the effective length of the
shield less than the length of any of its individual conductors.

There might be an oxide finish that's not all that conductive
on those fine strands, the conduction points between strands
might be many small ones & of high resistance each or the
various possible conduction paths might zig-zag quite a bit,
adding length ... <G>.

> switchboards were often unreachable due to the massive volume of calls.

*Yes, most call centres are scaled down to just be useful in normal situations due to trying to compete on a budget. As in most thing these days its money over everything else. The services always seem to come second. Especially in the National Health Center here in Blighty.

> The response of local authorities, now termed "confused" by deposed

> Radio Service, especially in light of its outstanding efforts in recent
> days. Remind your elected representatives that a vibrant and unimpeded
> Amateur service can and will be a lifesaver when disaster strikes.

*I remember the fight to try to get CB in the UK back in 81, the struggle we
had with politicians who were so blind as to see its benefits. In Amateur
case the facts are already proven so its just downright ignorant to the
hobby to dismiss it.

> Also, consider how you yourself might help. What if a hurricane,
> tornado, or earthquake ravages your area? Are you prepared to get on
> the air without relying on the mains to handle emergency traffic? Get
> in touch with your local amateur-radio club and find out how you can
> pitch in.

*I will be ready on my good old trusty CB to broadcast to the masses. More
accessible and cheaply available than Ham but im sure the both can work in
tandem.

> Your cell phones and wireless routers are indeed great stuff, but so is

> let the flood of new technology wash away the old. The geek down the
> block with all the antennas on his property could turn out to be your
> best friend someday. Because sometimes, old trumps new.

*My arguement also for the continued usefulness of CB radio. Not a replacement for the mobile phone or internet but another communications option especially if the s_it hits the fan. Phones and the internet cant do what the CB does, and vice versa so why not embrace the three. Amateur doesnt need embracing as its there and its not for the general public. It use just needs accepting by the authorities a bit more even though its been proved time and time again.

Simply put, The only good Fascist is a dead fascist, let her Christmas Nazi stuff sell, but a reminder to all those who think that fascim and Hitler were the shit,They lost, Remember, or, did that not happen like Vietnam and pogo-sticks. When I actually meet anon-exconvict Arayan(which, by the way is a word I believe in Sanskrit, since most Nazis are Dumb as a retarded two-headed cow, Sanskrit is the language that came from....GASP! India) I do believe they are dark skinned are they not?
Do Nazi's Like Italians? they should, The word Fascist comes from the Roman (remember decadent homosexual Rome)Fascias, if my Latin spelling is correct ,Which is a bundle of sticks, spears arrows etc. which in Anglo-Saxon slang is a faggot....One begins to wonder ....Prison, faggots, sticks, Celie's or Sally's? What are you trying to hide you diminutive Cowards and no big pick-up trucks do not make the penis more rigid. So, I reiterate all Nazis, unless I ever ever meet one who has a coherent well-formed thought that is original and not just plain stupid racist mucus will believe that 1. you must like losers
2.Youare all closet homosexuals
3.you are complete pussies, you do not intimidate and if I had my way and a .45
I would not hesitate to shoot you without guilt or regret. my name is Mr. Grey
I am an Anti-Fascist anarchist and I hope we may be one day issued Nazi hunting licences here in America. and I'm white. your Jemima will dry your tears sweety if this insults you or makes you mad, but come and see me and you won't have to worry. IN NO FLEXIBLE TERMS DO I NOT ADVOCATE THE MURDER OF FASCISTS. THEY SHOULD BE HUNG like Mussolini. I SAY this without any remorse, they should not be allowed to be buried with real humans. take them to the local landfill.

In addition to the several new radios mentioned you should give consideration to buying a used receiver such as a Kenwood R-5000, Icom R71a or one of the Japan Radios. The Kenwood R-5000 is my personal favorite, but any of the three will provide excellent reception and have several features that wil help extracting a signal from difficult listening conditions.

Good luck in the search and be sure to mention the receiver you finally choose.

Everything I've read tells me the Drake receivers are high performers.
In the few times I tried one I was impressed with it's performance and
with the sheer number of controls. The only thing I was less than
impressed with was it's "feel" - the controls and the display left me
unimpressed.

Sending DLS (Internet) over powerlines uses either
1.8 to 32 MHz
or
3 to 21 Mhz.
Of cause in the first case CB is also affected.

The signal strength was measured by the gov, and
found to be 111.639 times the allowed limit....
They had to reduce it a factor 111.639 to make even digital radio
reception (DRM (Digital Radio Mondial)) possible.

New tests are running, here is an original article in German:
http://www.heise.de/newsticker/meldung/66673

As internet over powerlines is also considered in the US,
I think US amateurs and CB people should strongly protest
too.

These guys got the license to operate 'because it is cable,
and that is not regulated like radio'.
Of cause powerlines are not shielded, and high up there, the
perfect VERY long antennas....

;-) Maybe if the conditions are good you will be able to get free internet
from Austria in the US. ;-)

Actually, any Boy Scout can read code. Hams have their own jargon,
for efficiency, but one need not be a fully licensed ham to read a code
message. One only need be informed. That can be anybody.

> just Amateurs.

While that may seem to be true, the chaos on the 11 meter band is
evidence of just how unworkable 11 meters would be in an emergency. Yes,
it would work, and yes, anyone would be able to use it. However, the
advantage hams have in an emergency is the discipline and understanding
of protocols to be able to get a message through crowded bands, without
creating any new interference. Most untrained operators, not all, but
most by far, would simply get on the radio and start talking regardless
of who is there first. This, coupled with CB's limited local range would
be more of an impediment than trained hams working limited allocations

in fewer numbers. In an emergency, the 11 meter band may simply not be sufficiently open to make CB a practical alternative to the amateur service.

Amateur operators would have a power advantage, as well, exceeding 200 times the CB user's power output.

Non hams do not understand the long standing traditions of the amateur net--a group, or network of hams working together to get messages from any part of the world to any other part of the world, either acting as phone relay stations or as traffic handlers relaying content. Those networks have existed since Maxim, and are already in place. They exist from coast to coast on all bands. CB does not have such a tradition. Primarily because long distance communication, by the rules of the charter of the service prohibit long distance. But realistically, CB operators are simply not organized into networks ready and willing to move traffic. Most REACT teams are as unable to get a message through a crowded band as any other operator. 5 watts when untrained users are screaming for assistance all at once is not sufficient to overcome the noise.

Further, ham operators are uniquely able, and qualified to improvise communications where non exist. There are bands throughout the spectra with propagation characteristics unique to needs of the moment. Hams know where and when these characteristics are available. CB users do not. Ham operators are legally permitted to improvise equipment, as well, often cobbling together equipment of many types, modifying as they go, to create the combination of hardware necessary to their needs. All they have to do is operate within the bands, and refrain from creating interference. Short of that, only the individual's technical limitations are a factor. CB users, however, frequently don't have the technical expertise to improvise. Even if they did, such improvisation on the 11 meter band is prohibited. Only type accepted hardware is permitted, and it may not be modified by the end user. Few CB operators are licensed to service their own radios. In an emergency, they'd be limited by the functionality and serviceability of the hardware at hand. Ham radio operators, on the other hand, would have no limitations except that they must operate within the bands, and the emissions must not create interference.

So, while it may seem true that CB is open to everyone and a far better option that a licensed service, reality begs to differ.

What's unfortunate, is that the CB mentality has begun to affect the amateur service, as well. The sense of community and public service has been eroded by those who don't know, nor do they care, about the public service aspect of amateur radio. And the responsibilities of being a part of the service.

>
>> Now that things have calmed down in the Gulf region, many of
>> the emergency nets have stood down. But hams continue to serve the

>
> How are they doing this? in what way? Who are they talking to?

Emergency generators in private hands are still considered a rarity
by most. Not the case. I live in Suburban Chicago. Half of my neighbors
have generators. I have a 20,000 watt generator that I can kick in when
the power goes down--a trick I learned from my grandfather. Hams who
participated in DXpeditions, or field days often have generators to
power their rigs. As a second tier backup, I"ve got a 1000 watt inverter
that I can power with the battery on my car. With the heavy duty three
phase alternator I installed, I can keep that battery alive simply by
starting the car and letting it run for an hour or two every so often.

If one wants to, there are always methods of being prepared for
power outtage.

As for who they're talking to? Other hams. There are a lot of them
out there. And many in any given community.

>
>> Also, consider how you yourself might help. What if a hurricane,

>> in touch with your local amateur-radio club and find out how you can
>> pitch in.
>
> *I will be ready on my good old trusty CB to broadcast to the masses.

Exactly my point. Broadcast is not the goal. Point to point
communication is. And that's where hams excel. Because they know how to
work together, not only to limit interference, but to move traffic.
They're organized. They're disciplined. They don't broadcast to the
masses. They have a plan, and it's already in place. You are but one
with a radio and an intent. So are hundreds of others in your region.
None of you have gotten together to create a strategy to handle
communications in an emergency. Chaos threatens.

A good analogy is the a football stadium. Organized individuals
could move a message around the stadium during a game. While those
'ready to broadcast to the masses,' would simply begin calling out to
whoever hears them. As they do when the ball nears the goal.
Organization would get an intelligible message through the noise. While
the unorganized would BE the noise.

4457. CLIMATE CHANGE

Newsgroup: rec.radio.shortwave
Date: 2005-11-27 14:14:46 UTC
From: "http://www.lookaboutusa.com/" <nswamfm@yahoo.com>
Message-ID: <1133100886.020860.230910@g49g2000cwa.googlegroups.com>
Source record: 51408

The Carteret Islands are almost invisible on a map of the South Pacific, but the horseshoe scattering of atolls is on the front-line of

climate change, as rising sea levels and storm surges eat away at their

existence.

For 20 years, the 2,000 islanders have fought a losing battle against the ocean, building sea walls and trying to plant mangroves. Each year,

the waves surge in, destroying vegetable gardens, washing away homes and poisoning freshwater supplies.

Papua New Guinea's Carteret islanders are destined to become some of the world's first climate change refugees. Their islands are becoming uninhabitable, and may disappear below the waves.

A decision has been made to move the islanders to the larger nearby Bougainville island, four hours' boat ride to the southwest. Ten families at a time will be moved, over one to two years, once funds are

allocated for the resettlement program.

"It's a pretty hard life out there on the islands. Some of the homes have been washed away," Joe Kaipu, the senior district coordinator of Bougainville, told Reuters by telephone.

"The only action now is to resettle them," he said.

A United Nations panel of more than 2,000 scientists has predicted that

average sea levels are likely to rise between 9 and 88 cm (3.5 to 35 inches) by 2100, mainly because of a build-up of heat-trapping greenhouse gases in the atmosphere from the burning of fossil fuels, such as oil and coal.

Sea levels are expected to rise because of a melting of ice caps and because water expands when it warms. If the entire Greenland ice sheet melted in coming centuries, for instance, sea levels would rise by seven meters.

Many scientists say a 50 cm rise in sea levels could cause a 50 meter retreat of the coastline in low-lying areas.

At the higher end of the forecast, the sea would overflow the heavily populated coasts of countries such as Bangladesh, and cause low-lying island states like the Indian Ocean's Maldives and South Pacific's Kiribati and Tuvalu to disappear.

SINKING ISLANDS

"It's a matter of survival for us. If our islands go under, we all go under," said President Anote Tong of Kiribati, 33 low-lying islands covering 5 million sq. km (1.9 million sq. mile) in the South Pacific and home to about 100,000 people.

"We move back from the shoreline, (but) how far can we move back? We are in danger of falling off the backside of our islands," Tong told Reuters at a recent Pacific leaders' summit in Port Moresby, capital of

Papua New Guinea.

Kiribati's highest point is 87 meters (261 ft) above the sea. Most islands are coral atolls covered with just 2.5 meters (just over 8 ft) of hard sand and meager soil. There are no rivers and most islands enclose a lagoon.

Two uninhabited Kiribati islands, Tebua Tarawa and Abanuea, disappeared

underwater in 1999, according to the South Pacific Regional Environment

Program, and the island of Tepuka Savilivili no longer has any coconut trees due to salination.

Tong said the world's big polluters, like the United States and Australia who have remained outside the United Nations' Kyoto Protocol on reducing greenhouse gases, must face the moral consequences of their

inaction.

"That is a question that they have to ask themselves -- are they willing to see us go under?" Tong said.

The United States pulled out of Kyoto in 2001 when President George W. Bush said it was too expensive and wrongly excluded poor nations from the first round of cuts to 2012. Australia has also refused to ratify the protocol.

ENVIRONMENTAL REFUGEES

Scientists say rising sea levels would also foul freshwater supplies for millions of people and spur mass migrations.

A recent UN study forecast that some 50 million people could became environmental refugees by 2010, driven from their homes by desertification, rising sea levels, flooding and storms linked to climate change.

Tuvalu Prime Minister Maatia Toafa hates the term "environmental refugee" but admits his 11,600 people may have to abandon their South Pacific island homes.

Tuvalu consists of a fringe of nine atolls, with the highest point no more than 5 meters (17 ft) above sea level, but most a mere 2 meters (6.5 ft) high.

A small island off the capital Funafuti has already disappeared beneath

the sea and some islanders have been forced to grow crops in tins because the soil has become too salty.

In February, only days before Kyoto came into effect, Tuvaluans in the capital watched high tides and strong winds send waves crashing across the main road. Children rode the waves on makeshift surfboards, trailing behind cars and vans dashing for higher ground.

"The prediction is (that) in 50 years Tuvalu will not exist," said Toafa. "Resettlement is impossible in the country because all the islands are low-lying," he said from Funafuti.

MONTREAL HOPE

In the Indian Ocean, the Maldives' 1,200 coral islands lie so low that some were briefly swamped when the December 26 Asian tsunami hit the scattered island state off India.

Maldives President Maumoon Abdul Gayoom published "The Maldives: A Nation in Peril" in 1998, outlining the danger of rising seas. Since then, coastal defenses have been built and efforts made to protect reefs and guard against storm surges.

"We are doing all we can to protect our nation. However, what we do here in the Maldives does not guarantee us an environmentally secure future," Gayoom told Reuters.

"Our safety would only be certain when the international community takes concrete steps to curb greenhouse gas emissions, and specific actions to reduce the threat of sea level rise."

Small island nations want a new insurance facility to help underwrite the cost of climate change-related weather damage, and have called for a special fund to build coastal defenses, protect water supplies and develop new forms of agriculture.

Gayoom said he hoped the UN climate change conference in Montreal, starting on November 28, would lay foundations for a post-Kyoto solution to climate change, by finding common ground with big polluting

nations.

"Those who have rejected the Kyoto Protocol should not wait for unequivocal scientific proof of the climate change process, but need to

find the political will to go beyond the short-term benefits of their respective countries, for an environmentally secure future," Gayoom said.

Yep, and there might be quantum level black holes which might act as
continuum tranfunctioners. This might cause a localized distortion of
space-time which might cause the many zig-zags to have an effective path
length shorter than the center conductor.

The best portable since the icf 2010!
Reviewer: EricB from Kalamazoo, mich on Sat Nov 05 08:48:25 EST 2005
4 out of 5 found this review helpful

This radio has it all! It has every high tech reception aid available
I.e. sync detector that really works, passband tuning,and three band
widths. As a swler for over 20 years the only thing that could do
better is a table top that would cost you over $1000.00. As for all
other aspects of the radio it does fantastic! Also the xm is thrown in
to boot. the only thing i found was the external antenna connetion
gets warm not very but noticeable. Over all the radio gives you great
bang for your buck! I use mine every day with great results!

And Amateur Bands are all run by responsible people who never mess about and
theres never any "Chaos" on there is what you are saying now??

>Yes,
> it would work, and yes, anyone would be able to use it. However, the
> advantage hams have in an emergency is the discipline and understanding
> of protocols to be able to get a message through crowded bands, without
> creating any new interference. Most untrained operators

One sec. You are also simply going on about civilians... where do the police
come into it? Their radios are knocked out and they need communications.
They cant use amateur bands because they arent licenced.... they can use
CB's though cant they?

> not all, but
> most by far, would simply get on the radio and start talking regardless
> of who is there first. This, coupled with CB's limited local range would

> be more of an impediment than trained hams working limited allocations

> sufficiently open to make CB a practical alternative to the amateur
service.

I dont think you understood what i meant. I didnt mean use CB instead of
Amateur. I cant see why the both cant be used side by side.

> Amateur operators would have a power advantage, as well, exceeding
> 200 times the CB user's power output.

Dont forget were talking about local'ish communications here not wide
ranging communication. The information only needs to be put out to somewhere
with power and unaffected. Also power wise theres a good few set ups on the
CB band out there with plenty of power. You go on about legally but were
talking natural disaster times here and i doubt if everyone sits reading
rule books to see what they can do.

> Non hams do not understand the long standing traditions of the

> and willing to move traffic. Most REACT teams are as unable to get a
> message through a crowded band as any other operator. 5 watts when
> untrained users are screaming for assistance all at once is not
> sufficient to overcome the noise.

Like i said, side by side not instead of. Dont forget a lot of these
screaming untrained users wont be able to use their sets due to homebase
power cuts and in NO case, flooded vehicals but it wouldnt take long to
organise some sort of communication set up via CB in these instances. It
only needs a few experienced CB operators to make it viable. There are some
clever organised CB groups out there which you overlook just as the
politician chappie in charge tried to brush off radio Amateurs... we dont
need their help... remember? Your doing exactly the same thing. The more
communications channels in an emergancy the better.

//snip//

CB users, however, frequently don't have the technical
> expertise to improvise. Even if they did, such improvisation on the 11

> operators, on the other hand, would have no limitations except that they
> must operate within the bands, and the emissions must not create
> interference.

You dont need adapted hardware. Were talking local communications here not
trying to get out round the world. The CB service is perfectly adiquate for
this.

> So, while it may seem true that CB is open to everyone and a far
> better option that a licensed service, reality begs to differ.

Pedantic reply there. You knew perfectly well what i meant which was to get information about and communicate to those in range (remember the repeaters being knocked out)

And that's where hams excel. Because they know how to
> work together, not only to limit interference, but to move traffic.
> They're organized. They're disciplined. They don't broadcast to the
> masses. They have a plan, and it's already in place.

Bollocks........ only the Hams who have been trained for such events have plans in place

You are but one
> with a radio and an intent. So are hundreds of others in your region.

Internet wouldnt be an issue... knocked out remember. As will have most of the incapable users of CB. Only the ones prepaired "with a plan" would be on air ready to organise. Or do you think anyone who isnt an Amateur couldnt organise anything. I know a few Amateurs who couldnt organise their breakfasts in the mornings never mind anything else.

> None of you have gotten together to create a strategy to handle
> communications in an emergency. Chaos threatens.

> A good analogy is the a football stadium. Organized individuals

Trumpet blowing for ones own service and nothing else. As far as perfect Hams go, you seem to think they are all angels and well organised. Well unless they have been recruited and actually trained for such events then they would be as useless as the next person. Not all Hams are as you imply.

You also seem to repeatedly go on about one or the other service. Like i said earlier and was not picked up on as your own trumpet was deafening you, both services could have run side by side perfectly fine. CB for the general organising of local issues and policing and Amateur for the longer distance more drafting in supplies side of things and keeping outsiders informed....

Regards,
Graham.

4470. Re: Best SWL RCVR to buy?

Newsgroup: rec.radio.shortwave
Date: 2005-11-27 15:33:12 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1133105592.721293.65670@g47g2000cwa.googlegroups.com>
Source record: 51421

I suggest picking up a used Lowe HF-150. It's very portable, very rugged and a good performer. The E1 is way overpriced.

4471. Best 'portable' Shortwave Receiver ? Icom IC-75 Communications Receiver -or- Eton E1 AM/FM Shortwave Radio

Newsgroup: rec.radio.shortwave
Date: 2005-11-27 15:49:22 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1133106562.758236.241510@g49g2000cwa.googlegroups.com>
Source record: 51422

OregonMike,

Best 'portable' Shortwave Receiver ? Icom IC-75 Communications
Receiver -or- Eton E1 AM/FM Shortwave Radio
- - - Sort of Depends on what you call 'portable' ! - imho ~ RHF
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6730
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/1863
http://groups.yahoo.com/group/icomr75/message/10957

"IF' by being 'portable' you mean "Mobile" then the
Icom IC-R75 is reasonably small enough to tote-around
and use in a "Mobile" Mode running-off the 12 VDC Power
of your Car or Truck.
* Icom IC-R75 AM/MW Shortwave Receiver
http://www.grove-ent.com/ICR75.html
http://www.universal-radio.com/catalog/commrxvr/0175.html
http://www.icomamerica.com/products/receivers/r75/
http://www.icomamerica.com/brochures/ic-r75.pdf
http://www.icomamerica.com/images/product/r75.jpg
* Icom IC-R75 AM/MW Shortwave Receiver - Specifications
http://www.universal-radio.com/catalog/commrxvr/0175spec.html
http://www.icomamerica.com/products/receivers/r75/specs.asp
* Optional - OPC-869 DC Fused Power Cable for 12 VDC Operation.
http://www.universal-radio.com/catalog/commrxvr/0175ops.html
http://www.icomamerica.com/products/receivers/r75/specs.asp#acc
* Radio Netherlands 'Review" Icom IC-R75 AM/MW Shortwave Receiver

GROUP => http://groups.yahoo.com/group/icomr75/

However, 'if' by being 'portable' you mean "Hand-Carrying"
then consider the Eton E1 AM/FM Shortwave Radio with the
optional XM Satellite Radio. It does in fact Run-Off
Batteries 4x"D"s and does have a fairly good average Battery
Life Cycle of about 80 Hours for AM/FM and Shortwave.
Note - The Battery Life using the 'optional' XM Satellite
Radio Tuner/Antenna is only in the range of 12-18 Hours.
It can be easily Rigged to Run-Off your Car's 12 VDC Power
with an Adapter.

4474. Here comes the Digital TV disaster

Newsgroup: rec.radio.shortwave
Date: 2005-11-27 16:29:50 UTC
From: Kookwatch 968549 <undermyhat@yahoo.com>
Message-ID: <9271a$4389ed07$d1cc5677$26533@snip.allthenewsgroups.com>

Here comes Digital TV !!

http://www.dtv.gov/

(....otherwise known as the FCC's pending DISASTER when regular
analog broadcasting goes off the air and suddenly millions upon
millions of TV sets suddenly are "obsolete" and no longer work)

Can you just imagine what will happen the first weekend after
the DTV shi+ hits the fan and Bubba can't watch his BALL
GAMES or his NASCAR on his, now utterly useless TeeVee...?
Unless of course he buys a $100 set-top converter box for every TV
Want to talk about an excuse for rioting in the streets? Here it is, or
will be soon!
Not to mention also the fact that DTV will cause RFI to public
service commnications to go thru the roof, including cell phones which
will be useless anywhere near the transmitter. (this should be fun)

http://www.dtv.gov/consumercorner.html#obsolete

"The target date for the end of the transition from
analog to digital television signals is December 31, 2008.
That date may be extended, however, until most
homes (85%) in an area are able to watch the DTV
programming. At that point, broadcasting the
current ï¿½analogï¿½ channels will end and that spectrum
will be put to other uses. Until the transition to DTV
is complete, television stations will continue broadcasting
on both their digital and analog channels."

DTV broadcast is HIGHLY prone to multipath distortion problems
caused by shortcomings of the 8-channel vestigial sideband (8VSB)
transmission standard, which has been mandated for use by all
broadcasters in the United States by the Federal Communications
Commission. In short, if you think it was hard to get TV reception
back in the 60's and 70's before cable using a pair of rabbit ears
then you ain't seen nothing yet! With DTV you get nothing if even
one bit is missing from the broadcast stream. Black screen DOA.

Finally, here is the URL of the people who pushed this
pending disaster thru Congress: http://www.dtvcoalition.com/

Other articles on how flawed DTV really is and how
consumers are likely to react in anger when their sets
go dark in late 2009: http://dtvfacts.com/

I have to admit, the R8 series just screamed CHEAP everytime I played
with one. It was a decent enough receiver, but I never really had the
desire to buy one. An R7/a was miles beyond an R8X, IMO.

The HF-150 only gets a few hours on the batteries. How do you figure
the E1 is overpriced? The SW8 cost a lot more and has fewer features.

My feeling is that it isn't going to do much good to cry... the FCC and
majority of the public seem to like it... and the Hams and CBers have a
lousy lobby. Let's hope the levels are low enough to be tolerable.

Most people already have the necessary converter. It's called a cable
box. The STBs for the rest of the peeps will most likely be ca $25.
Closer to that than $100.

Well, you could have an extra set of batteries in case the ones you're using run out of steam. Wouldn't cost that much. You could buy a 150 and *several* sets of rechargeables for what you'd spend on an E1.

$500 is too much for a portable receiver. The SW77, before it was discontinued, also cost around $500. That doesn't show that the E1 isn't overpriced, but simply that both the SW77 and E1 are/were overpriced. Yes, the E1 has a lot of "features", but you're asking for disappointment if you base your buying decisions on long lists of features. (Features are relevant, of course, but they don't guarantee good performance.) No matter how many features you tack onto the E1, it's still only a portable receiver. A really good portable receiver, no doubt, but if you have $500 bucks to spend, it's time to walk out of the portable aisle--unless you have money to burn and don't care about bang for the buck.

Part of Big Brother's campaign to control the airwaves completely.
They do not want us to be able to communicate without using their
infrastructure.

Most DTV transmitters are already on the air. There have been no reports of problems with cell phones or other public service communications.

There were early reports (only in Dallas, to the best of my knowledge) of RFI problems with medical telemetry devices. These devices were operating *in* a TV channel that was unused when they were purchased but was assigned to a Dallas station's DTV operation. As you might imagine, when the station came on the air, there were problems! They suspended DTV operations, the medical equipment was moved to different frequencies, the DTV station fired back up, and all is well.

DTV will actually *reduce* the risk of RFI problems with cell phones. There have been problems with cell-phone front-end overload from channel 69 TV stations. However, there will be only ONE DTV station on channel 69 (in Puerto Rico) and even that is a temporary operation - the station will in a few years move to a lower channel. Channels 52-69 are to be deleted from TV service.

Now, as for the political firestorm when the analog transmitters are turned off... I think those who believe *everyone* has cable will be surprised...

The mayor was only confirming what many of us in this hobby realize:
Ham radio operators have not served any useful purpose in emergency
communications for a long time. The professionals pretty much ignore
them. At most they talk to one-another in health and welfare nets and
if someone actually calls in with an emergency all hell breaks loose
because everyone wants to talk personally with the ham calling in.

Hams have this vision of themselves as the emergency communicators who
while huddled in a dark storm beaten shack will get through to the
outside world and save the day by using a car battery and some
jury-rigged cw setup. And the hams on the outside see themselves as
the unique link on the other end who will alert the authorities and
direct them to the site before anyone else can because they alone have
a connection with the emergency site. It's little more than mental
masturbation folks 'cause the real world doesn't work that way.

Oh, really? High-quality, flat-response tuner / IF strip / demodulator,
plus a scan convertor to convert from any of the gazillion digital
formats to NTSC, and RF modulator and power supply, all for $25 consumer
price?

Yep,

You have to plan on maybe getting waxed everytime you climb on your bike.

I took down a couple sections of a split rail fence on a 76 sportster. I was on my way to my girl friend's house back in 79. Quite riding for 20 years till my kids were grown up. Now we're on a on a softail. (I ended up marrying that girl whose house I was on my way to back in 79) Below is link to picture.

> describe it in detail.)

I think most of you people are somewhat confused when dealing with the characteristics of transmission lines of all types. For example, the mixing of impedances as indicated above results in a "return loss" or reflection loss. There also ohmic losses in transmission lines as well as dielectric losses. Impedance is a constant characteristic of a coaxial transmission, not a variable. It is a fixed quantity and is calculated in the following manner.

Characteristic Impedance of a co-axial transmission line whose dielectric material is air..

Example:

d1= the inside diameter of the outer conductor = 3"
d2= the outside diameter of the inner conductor=1.5"
e=1= dielectric constant of "air" (changes according to the dielectric material used)

Z = 138/sqrt(e)x(log(d1/d2))
Z = 138/sqrt(1)x(log(3/1.5))
=41.54 Ohms

This co-axial transmission line has a characteristic impedance of 41.54 Ohms

Likewise, dielectric losses, ohmic losses and overall attenuation (which all vary with frequency and line size) may be quantified through calculation. Transmission lines are not devices that can be properly evaluated through observation and/or measurement, their characteristics are too complex.
Their sole purpose in life is to efficiently transfer energy from generator to load. This is accomplished by having both the generator and load impedances equal to the characteristic impedance of the transmission line.

So, enough of the crap such as, "the wires in the shield are longer than the center conductor. Therefore the outer conductor is longer than the inner conductor". Keerist, that's even crummy observation.

Read a textbook for cripe's sake.

One might suggest it's an encouraging sign that Ms. Jacobsen knew about
the role amateur radio can play in such things...

People talk like this whole DTV conversion is coming as a surprise.
It's been planned and in the news regularly for the last decade
(literally). This isn't some overnight switheroo that Congress is
trying to pull. There's been plenty of advance notice. If some people
choose to ignore the news and are surprised four years from now when
they can't watch regular TV (and that is only if they receive over the
air only, which applies to roughly less than 15% of the country), so be
it.

Personally I'm looking forward to the highly increased picture quality
and digital surround sound that DTV can provide. If some people want to
stick with their 1950s technology, so be it; but don't hold it against
those of us who want to move into the 21st century, thank you very
much. Many parts of the world like Japan and Western Europe have pretty
much moved to DTV already, and those countries haven't been engulfed in
mobs of angry people who can't watch TV anymore.

Chinese manufacturer, who made most of the Radio Shack SW receivers... and
bought the brand when Grundig failed.

++++++++++++++++++++++++++++++++
For true portability I would suggest the 24V version of the R392, the
R392.
Back in 1970 I was tickled pink with mine.

Only ~69lbs. And a pair of car batteries to power it will only add
another 60lbs.

Which might be one reason why I have a hernia.

Terry

The problem isn't moving into the 21st Century, Mr. Futuristic Modern Dude.
We're already there. The problem is *removing* the existing broadcasts.

There'd be room for everyone if Congress wasn't so easily bought by
commercial interests bent on forcing the public to throw away literally
TRILLIONS OF DOLLARS worth of equipment.

I'm as far from a treehugger as one can get, but have you given any
thought whatever to the landfill problem when hundreds of millions of
television sets suddenly need landfill for disposal?

I've seen them go for well under $500. You might have to wait a while, but...

As for portability, my guess is the 150 is better in this regard. It's probably smaller and is certainly built better.

That's completely silly. No one could make *anything* for $25 if they
are forced to do it in runs of ten or fifteen at a time because the
suppliers don't have parts.

> http://www.ati.com/products/nxt2000/features.html

Vague.

> http://www.st.com/stonline/press/news/year1997/p686p.htm

Here you might have something... except the chip has to be about 25
cents to pass the rule of 10. Figure $8 in 10,000 qty, then your
set top box might make $100.

> the E1 is overpriced?

This point is not really worth pursuing, David. Steve has been vocal on this point from one thread to the next where the E1 is discussed: he finds the $500 price to be too much for a portable. It's the central thesis to any argument he makes on the E1.

So he finds the price too high. Fair enough. Other folks don't find it to be too much. That's fair enough, too. Steve provides a lot of great info/insight/perspective to this group, but don't expect him to agree with you that $500 is an acceptable price for the E1. It ain't gonna happen.

Speaking for myself, I don't find the price so high that I wouldn't consider buyin' an E1. As for the bang for buck consideration, it's a matter of what bang you're lookin' for. As someone who does a lot of listening away from home, I find the E1 to be an extremely attractive option, as an reasonably-sized, all-in-one-unit premium portable.

Make no doubt about it, the HF-150 is a nice radio...although for that class of radio, I twice opted for the SW8 and have been extremely happy with the choice.

Still, the E1 fills a specific niche, and I'm personally quite pleased that it has come along to fill that niche. I hope it proves to be a successful seller. Because if the E1 proves a failure, we can well expect the portable market to be left to the cheap, uninspiring, under-$100 Chinese portables (and any new product hype will be over such trivial matters as the inclusion of another 200 memories on the latest Kaito Degen or a cabinet that's .5 cm less wide than the predecessor).

Best,

Junius

So the longer conductors are not shorter after all? How long
do you suppose that they are compared to the central conductor ???
Now, about the speed of light in those conductors ... a lead or
a lag between the signal's phases?

If you've ever suffered the pain and anguish of only 1699 presets you wouldn't be asking why. Hardly a day goes by when I don't regret my earlier decision.

If only I had that *one* extra preset option, my life would be complete.

Pore feller, yer countenance is displaying a fine shade of green.

Amateur radio is only as helpful as the people in it, but there are PLENTY
of stories of assistance by hams in the recent storms including one where
the hams on scene in New Orleans LOANED HF equipment to the National Guard
because theirs wouldn't WORK!

All I see here is a high shade of envy and sour grapes towards hams who
traditionally lend a hand. Shame on you!

---

+V>---O
|
S1 | <--O--[AMMETER]--+--[INFINITELY LONG COAX CENTER CONDUCTOR]-
|
[VOLTMETER]
|
GND>---------------------+--[INFINITELY LONG COAX SHIELD------------

1. Close S1

2. Read the ammeter and record what you read as 'I'

3. Read the voltmeter and record what you read as 'E'

4. Calculate the resistance of the cable:

E
R = ---
I

5. Since a DC source is driving the cable and the voltage and
current remain constant, there must be no reactive terms which
need to be considered, so:
```

Z = sqrt Rï¿½ = R

Thinking about it a little differently, if you consider that when
you close the switch the inductance of the center conductor is
limiting the current that can charge the incremental capacitance of
the cable as the edge propagates down the cable, then that limit and
that capacitance define how much current the voltage source driving
the cable needs to supply while the edge is moving down the cable,
and, since

E
R = ---
I

we wind up back where we started.

Nice try, however:

As usual, ham radio operators help sustain wide-ranging relief efforts
By Andrea Kelly
ARIZONA DAILY STAR

When all else fails, it's ham radio to the rescue. Across Arizona, ham radio operators are helping sustain Hurricane Katrina relief efforts by helping storm-torn communities communicate with rescue workers and family across the country.

This is not a first. Ham radio operators come out of the woodwork during disasters around the world, even transmitting in Morse code if language barriers pop up, said Mike Swiader, president of the amateur Superstition Radio Club in Mesa.

Ham radio operators have contributed to emergency communication efforts since World War II, Swiader said, and were crucial in post-9/11 emergency communications, as well as during the Asian tsunami last holiday season.

Ham radios work when other communication systems are down because they're powered by solar energy, batteries or generators rather than the usual power sources.

The messages are passed from radio to radio until they get to the one they are directed to, so radios don't need to be near each other to receive signals, like regular AM/FM radio signals.

"We've been involved in passing traffic to and from the Louisiana and Mississippi area," said Tom Fagan, a leader of the Arizona ham radio operators organization. "Whatever needs to come in and go out, we're doing."

When Arizona's ham operators - there are about 16,000 of them - get messages from the hurricane area, they send them along to agencies like the American Red Cross and the Salvation Army in the Southeastern region of the country.

"We're the link," Fagan said.

Because communications within a disaster area are often jumbled, Swiader said, it's frequently easier for someone there to contact an operator in someplace like Arizona, who can then relay the message back to a recipient in the disaster area.

"Sometimes it's easier to be heard that way," he said.

More than 30 ham radio operators from Arizona have already headed toward the disaster area, hoping to assist relief efforts and give emergency workers a way to communicate with each other, as well as assisting searches for missing persons.

"They're moving in when they're allowed by American Red Cross and Salvation Army," said Ned Stearns, a Phoenix ham operator and vice director of the American Radio Relay League, the national organization for ham operators.

In fact, the ham operators plan to compile a list of people they can determine as missing, deceased, alive or unknown, based on information transmitted over the ham signals.

To find out about people in the area, visit www.satern.org and fill out the health and welfare information request for the person you are trying to find. This information will be sent through the Salvation Army emergency radio network.

Ham radio operators are helping from afar
Sunday, September 11, 2005
By DONNA FORK
For the Times dfork@knology.net

But sometimes, even the airwaves can be shut down

They also serve who listen and wait.

Huntsville amateur radio operator Douglas Hilton and other "hams" in North Alabama are helping victims of Hurricane Katrina by relaying messages between families, officials and each other.

Lately, Hilton's been spending most of his spare time in his "ham shack" listening to calls for assistance. The systems analyst for Intergraph Corp. is one of thousands of amateur radio operators who help people during emergencies.

Hilton is unusual in the ham radio world because he wears three hats: He is an amateur operator; a member of the Alabama State Defense Force, heading the Communications Platoon for North Alabama; and he's also a military communicator authorized to use the Military Affiliate Radio System.

His connection to the military (although he is a civilian) gives him access to additional radio frequencies most amateurs can't access. He has been a ham radio operator for 42 years; his father had him build a

crystal radio when he was 7 years old, and he got his ham license as a teenager. But he wasn't all that active until after the terrorist attacks of Sept. 11, 2001.

"That hit me right between the eyes," he recalled, and he began to get back into "hamming."

Now Hilton averages about 100 hours a month on the airwaves and takes countless courses and certifications. He noted that amateur radio operators are "amateurs only in that we're not paid." In return for service "the government gives us frequencies."

Hilton said the North Alabama ham community is large.

"The astronauts are all ham radio operators," he said, noting that astronaut Owen Garriott "was the first ham in space."

Hilton''s "ham shack" is not really a shack at all. It is located in a formal dining room - complete with crystal chandelier. It includes six radios and two computers.

"You don't need six, but don't tell my wife, please," Hilton said as his wife, Diane, laughed. She recently obtained her "technician class" license, which is the entry-level license for ham radio operators. The next is "general class." The highest, which Hilton has, is "amateur extra." Anyone can be an amateur radio operator, Hilton said. There is no age limit: Hilton knows a local ham who is 18 and another who is 89.

It doesn't cost much to be an operator either, he said. A beginner could purchase enough equipment to get started for about $300. Courses are free through one of the local ham radio clubs, of which there are several, including the Huntsville Amateur Radio Club (the Web address is www.harc.net).

In addition to six radios, Hilton has two computers: a laptop and a desktop. "The radios are hooked into the computer." With his setup, the Hiltons can talk to other hams as far away as Japan.

But for the past two weeks there hasn't been time to chat about matters such as which antennas they like the best. There are emergency frequencies to monitor. At the moment, a critical one is the Salvation Army's emergency frequency, Hilton said.

Hilton never knows if it will be a busy night or a quiet one. Recent solar flares have added to the uncertainty because they disrupt communications. Friday, during the late afternoon and early evening, it was unusually quiet.

"I'm a little surprised," he said Friday. "I can't believe how dead these bands are."

Solar flare

It could be a solar flare, or could be something else. "That's the problem, you never know," he said. The waiting, the listening, "it wears you out." But it's worth it when you hear a voice and "you might be the only person who can hear this guy."

On Thursday night, when Hilton was expecting problems, reception was fine. He was able to contact two operators in Louisiana. He also heard one Mississippi ham talking to another ham "so at least one is working there."

ecause of the Hurricane Katrina disaster, there are thousands of messages piling up, waiting to be delivered by ham radio operators: What will happen when all their radios start working again?

People like Hilton will be extremely busy. There are thousands of ham radio operators in Louisiana and Mississippi. When they all get back to the airwaves, it will be quite a challenge to sort out all the messages.

But meanwhile, as they waited for the deluge of messages, on Thursday night the Huntsvillians received a call for help from New Mexico.

Maura Campbell Kingston of Clovis, N.M., was trying to reach her aunt, 76-year-old Sister Joan Campbell, a nun, of Harvey, La. Kingston called the Salvation Army, which contacted a ham radio operator, who called Hilton.

Hilton tried Thursday to reach a radio operator in Louisiana to check on Campbell, but almost all of them were off the air. Finally on Friday night Hilton got through to "KG5YK," who is Robert A. Turner of Elm Grove, La.

When Turner's message came through, hams from all over the United States could be heard, eager to talk with him.

Helping 'ham brother'

The outpouring of sympathy could not be contained: Radio operators from Texas, Indiana and elsewhere all expressed their support for their "ham brother" in Louisiana.

"I hope this never happens again," said Turner of the Katrina disaster. "It's been a tough time. ... I'm looking for the right words." He thanked the other hams for their all their help.

"You'd do the same for us," the ham from Texas said. Others echoed his sentiments.

Turner gave Hilton information about when to call with his "health and welfare message" about Kingston's aunt. Hilton vowed to keep trying to deliver the message "for as long as it takes."

But that proved to be unnecessary.

Friday night, after calling her aunt repeatedly, Kingston finally reached her by phone. She was still at her home in Harvey.

"She was OK," Kingston said in a telephone interview Saturday. "Harvey stayed dry." But the area was without power and Campbell "was sitting in the dark with her flashlight."

Later, Kingston called Hilton to thank him. She said he told her: "I'm just doing it because I want to help."

Kingston was impressed.

"I believe that thing about Southern hospitality."

Ham radio proves to be more than a hobby
By Jeannetta Edwards

Daily Times Leader

When Hurricane Katrina hit, telephone and cell phone communication hit an impasse because of downed lines and towers. But, amateur radio operators did not miss a beat or a transmission.

"Before and after the hurricane, this has proven to be the most reliable form of communication," said Randall O'Brien, a retired highway patrolman who has been involved with ham radio operation for 35 years.

"People thought when they got cell phones, they didn't need us anymore," said O'Brien, an advanced licensed operator, who often talks to missionaries in South and Central America.

According to Denver Baker, Clay County has more than 30 amateur radio operators, but only a small fraction are active.

"It's a wonderful hobby," said Baker, whose wife recently received her technician license.

The multi-faceted operation includes digital and satellite communication and is enjoyed by all age levels.

"This is a good hobby for seniors or for young people," said Baker.

By becoming a ham radio operator, which requires taking a test to obtain a license, people can communicate with others anywhere in the world.

"The classes for the test are free," said Baker, "and we help you with everything you need to know."

According to Baker, who has been enjoying this hobby for the last 10 years, the only investment required is the fee for the test and the purchase of equipment. A handheld transmitter cost around $100.

The self-policing group ensures that everyone adheres to the rules and regulations.

"We're called amateur radio operators, but there's nothing amateur about it," said O'Brien, who first became interested in electronic at age 13.

The group, which also belongs to the American Radio Relay League, meets monthly in West Point.

"We have a good bunch of hams in this area," said Baker. "We bring food at our meetings and have a good time."

"It's nice, especially for seniors," said Baker.

For information on getting involved in ham radio operation, call O'Brien at 494-2898 or Baker at 494-9096.

Ham Radio Operators Offer Help

By Beth Hahn
Mountain View Telegraph
Since Hurricane Katrina hit New Orleans last week, several ears in the East Mountains and Estancia Valley have been tuned to amateur short-wave radios.
McIntosh resident Ed Brooks said local Ham radio operators are willing to relay messages from the Gulf Coast if needed.
"We guys here in the Estancia Valley are just listening," he said. "We haven't had any need for what we can offer."
Although they may not be needed yet, Brooks said local Ham radio operators are still listening in to conversations taking place in Louisiana, Mississippi and Alabama.
During the interview with Brooks, his Ham radio was tuned to a conversation involving a Coast Guard helicopter that was rescuing a family from a rooftop in New Orleans with direction from another Ham radio operator.
Brooks said similar situations have been broadcast hundreds of times during the past week.
"It's been really spotty, but what we've been (hearing) is that it was good fortune that somebody down there had Ham equipment," he said.
Daryl Clutter, an Edgewood Ham operator and member of the Salvation Army's shortwave network, said he relayed a message from Ontario to U.S. Coast Guard officials in Washington, D.C., that originated in Louisiana.
"It was just the word 'help' spelled out two times," he said.
Like Brooks, Clutter said he has stayed close to his Ham radio since Aug. 29.
"There's been so much going on," he said. "Every day, something happens."
Clutter, a former truck driver who often delivered frozen food to the Gulf Coast, said radio traffic has slowed since the hurricane devastated the region.
"You just wonder who all you know, that used to be your customers down there, that are still alive or had the good sense to get out," he said.
As amateur radio operators, Clutter said, Ham enthusiasts practice for disasters "every day."
"There's only so many cell phone frequencies," he explained. "If the phone system goes down, there's no way ... (one company) could handle all the 60,000 or 70,000 phone calls."

Mountainair resident and Ham operator Bob Scupp said the Salvation Army network alone has handled more than 128,000 messages since Aug. 29.
Brooks said Ham operators have been relaying messages from residents to volunteers or emergency personnel. Since a large number of National Guard and military personnel have arrived in the area, Brooks said the messages have changed from pleas for help to questions about well-being.
Shelters for evacuees are beginning to utilize Ham radios to communicate with other shelters to help families find missing relatives, Brooks said.
Rescues are still going on.
"There's been instances where they're still finding people, trapped in houses, trapped in buildings or running out of oxygen," said Clutter. "It's just terrible what's going on down there."
Clutter and Brooks said they will not offer assistance unless someone requests contact in the Albuquerque area.
"We don't want to tie up the frequencies," Brooks said.
Clutter and Brooks said they will continue to listen to their Ham radios for messages or relay requests until communications are restored in the Gulf Coast.
"We live and breathe this," Clutter said.

Amateur radio operators provide vital communications support
By Teresa Atkerson
MCALESTER NEWS-CAPITAL (MCALESTER, Okla.)
MCALESTER, Okla. -

With more than 10,000 requests for help in finding loved ones, the amateur radio operators in Louisiana are extremely busy.

In fact, they are so busy, they have asked people to wait with their requests unless there is an extreme emergency.

Ralph Suter, with the Pittsburg County Amateur Radio Club, said they had about a half dozen requests for assistance in locating loved ones in the area devastated by Hurricane Katrina. ï¿½The Red Cross funneled the requests for health and welfare,ï¿½ he explained. Now, the national traffic system is backed up with the requests, he said, because there were so many.

There are extreme problems with communications in New Orleans at the present time. Suter explained VHF radio has to have line of sight while amateur radio operators can use lower frequencies that can bounce off or curve to get the message through. ï¿½A benefit of amateur radio is you can throw a piece of wire in a tree or up a flagpole. With 12 volts of power, you can operate on a local or even worldwide basis,ï¿½ he explained.

As an example, Suter said recently an amateur radio operator in Louisiana had some kind of problem that he couldnï¿½t get help with after the hurricane. He put out the message, it went through Washington state

to Texas and then into Louisiana where the right people were found to help him.

Amateur radio operators can also communicate via Morse Code, upload through television or computer or radio to satellite, Suter said. That gives them even more advantages in communication.

Jim Russell, president of the PCARC, said amateur radio has been around as long as there has been radio. Even in World War I, amateur radio operators helped with messages in Morse Code, which is something operators today still must learn as part of their licensing process.

ï¿½We look at it as a hobby,ï¿½ Suter said. ï¿½Itï¿½s a resource of individuals because they have an interest to develop the skills to operate radios in various modes.

ï¿½Itï¿½s a resource for trained communicators.ï¿½

There are forms that must be used when transmitting messages. ï¿½When it goes into the system at one point and comes out at the destination, it is exactly the same information, even with the misspelled words,ï¿½ Suter said. ï¿½Itï¿½s our responsibility when handling traffic that it comes out exactly as it comes in.ï¿½

Suter said many of the operators use their radios on a daily basis while others check weekly. When it comes to disasters, there is the Amateur Radio Emergency Service. ï¿½Itï¿½s not really an organization but it is organized on a national basis for community programs.

John Wright, another PCARC member, checks with the Oklahoma Sooner Net and with the Salvation Armyï¿½s network, SATERN.

After the Oklahoma City bombing in 1995 and 9/11, Russell said amateur radio was used extensively. It is also used during and after tornadoes and other natural disasters. Now, the group can work with the Automatic Position Reporting System to help more accurately report severe weather.

The group has an annual field day, which is a combination of a exercise and a contest. ï¿½We go out and set up radios under adverse conditions to simulate disaster response,ï¿½ Suter said. ï¿½In the past, weï¿½ve started with solar power, using a battery in a car or even a portable generator.

ï¿½The last time I kept count, we were able to make contacts in 47 states, the Philippines, some in South America and Puerto Rico in a 24-hour period.ï¿½

Suter pointed out that the word ï¿½amateurï¿½ is not what people interpret it as. ï¿½People interpret it to be an unprofessional group. But while itï¿½s made up of a lot of people for a hobby, itï¿½s not unorganized or unprofessional when dealing with disaster. We have capabilities that public agencies just donï¿½t have,ï¿½ he said.

Members also have to be licensed. The license testing can be done in McAlester now so those wishing to be licensed donï¿½t have to go to Dallas or Oklahoma City as in the past.

Teresa Atkerson writes for the McAlester (Okla.) News-Capital.

Old Technology Still Needed
(Page 1 of 2)

Sept. 8, 2005

Overwhelming Charity

Joe Carcia, station manager of the American Radio Relay League in Newington, Conn. helps with the disaster relief effort for Hurricane Katrina's victims along the Gulf Coast. (AP)

If anything, Katrina has taught us the value of redundancy. The best way to make sure that messages get through is to have standby systems that can take over when others fail.

(CBS) There is a store in London dedicated to "appropriate technology." It mostly carries products designed to be used in developing countries where there is a weak communications infrastructure.

Sadly, thatï¿½s now the case for a large swath of the United States where Hurricane Katrina and its flood waters have wiped out cell phone towers, telephone switching stations, Internet routers and other ground-based communications systems. Even wireless Internet depends on nearby transmitters and receivers on the ground.

But amateur radio is working and, according to Allen Pitts of the Amateur Radio Relay League (ARRL), "ham" radio operators from throughout the country are answering the call to provide vital communications links. Satellite phones, a much newer technology, are also coming to the rescue.

Pitts acknowledges that cell phones and other technologies "work wonderfully when everything is going right," but "they are very vulnerable when everything is going wrong."

Just as with past hurricanes, earthquakes and on September 11th, the ground-based infrastructure, in many cases failed because vital parts of the system were damaged or overwhelmed during the emergency.

In other words, when you need them most, those cell phones are of no value.

Amateur radio, says Pitts, is not vulnerable to these problems "because each of the radio operators is a complete transmit and reception center unto themselves able to continue going and continue with nothing more than an electrical source, such as a battery or a generator, a radio and piece of wire for an antenna."

Listen to audio of Larry Magid's interview with ARRL's Allen Pitts.

While base-station radios are larger and require an electrical power source, there are also portable ham radios slightly larger than a pack of cigarettes with a range of about 20 miles, according to Pitts. Pitts says that the next sized radio, about the size of a paperback book, can communicate up to about 50 miles without a repeater while larger

systems, "about the size of a desktop computer" can communicate globally.

Amateur radio operators are in demand. When I checked the ARRLï¿½s Web site there was a call from the Salvation Army for "10, two-operator Amateur Radio teams for deployment in the U.S. Gulf Coast. Operators must hold at least a General class license. Teams should be fully self sufficient in terms of food, water and lodging and plan to remain in the disaster area for from one to two weeks."

Pitts said there was a "lady in Connecticut," who was listening on her amateur radio and happened to hear that there was a woman "who was trapped for four days without food and water." She was able to relay that message, by ham radio, into an operations center that dispatched the fire department. A day later she got a call from the trapped womanï¿½s mother, thanking her for her role in the rescue.

Ironically, this comes at a time when amateur radio is struggling for respect and, to some extent, survival. What was once a popular hobby has fallen into somewhat hard times for a variety of reasons, including the fact that the Internet, cheap long distance calling, cell phones and other technologies make the ability to use these two-way radios not quite as compelling as it once was.

Also, there is a bit of a rift between some members of the amateur radio community and some parts of the Internet industry over the use of power lines to transmit Internet signals. This technology, which could put power companies into competition with cable and phone companies for broadband service, has been criticized by some ham operators because of possible interference problems.

Despite the fact that their origins go back to the early 20th century, hams are hardly low-tech. There are now bridges between ham operators and other technologies including the Internet, cellular phone systems and Internet phones. In fact, long before the Internet became popular, ham operators were using their radio gear to transmit data along with voice and morse code.

Also coming to the rescue are satellite phones. These phones - which are much more expensive to buy and use than cell phones - rely on satellites rather than ground equipment to communicate with the phone network.

Because satellites are in space, theyï¿½re not vulnerable to conditions here on earth. Also, as long as you have a view of the sky, youï¿½re able to communicate. Iridium, which operates "66 low-earth orbiting (LEO), cross-linked satellites and 11 in-orbit spares," says it provides "complete coverage of the earth (including oceans, airways and Polar Regions)."

I carried an Iridium phone with me when I traveled to Peru a few years ago. It worked great when I was in the clear such as on a boat in the middle of the Amazon River but, because it requires a line of site view of the sky, it had problems in dense jungle and in cities with tall buildings.

Iridium spokesperson Liz DeCastro estimates that there are currently about 10,000 of Iridium's phones being used in the region with orders for about 6,000 more. The company sells through resellers so it doesnï¿½t have exact numbers. DeCastro says that "traffic in the region increased by 3,000 percent" since the storm hit and that the number of subscribers increased by 500 percent.

Satellite phones are a lot cheaper to use then when I went to Peru, but they still cost between $1 and $1.25 per minute to use, according to DeCastro. Thatï¿½s a lot more than domestic cell use, though often cheaper than using U.S. phones when roaming overseas. The phones themselves cost between $1,000 and $1,500 she says.

In addition to handling voice calls, satellite phones can also be used for messaging or data, albeit at modem rather than broadband speed.

If anything, Katrina has taught us the value of redundancy. The best way to make sure that messages get through is to have standby systems that can take over when others fail.

Thatï¿½s why some news organizations keep manual typewriters around. You never know when that old technology may suddenly become the "appropriate technology."

NYNewsday.com
Amateur radio operators head to Gulf Coast

September 6, 2005, 1:00 AM EDT

NEWINGTON, Conn. -- Oscar Fuller only became an amateur radio operator about a year ago, but he knows how valuable his equipment can be in an emergency.

So even though he has never responded to a crisis, the American Relay Radio League member is planning to head to the hurricane-ravaged Gulf Coast and see if he can help establish an emergency communication network.

"This is a tragic set of circumstances," said Fuller, who recently retired from IBM. "If I can lend a hand, I want to."

Fuller and about 14 other members of the Newington-based amateur radio operator network have signed up to join the relief efforts for Hurricane Katrina. The amateur operators _ known as hams _ can often use their equipment to communicate in difficult circumstances.

Because the radio equipment operates on many frequencies, is self-contained and portable, it can often work when other communication networks, such as telephones, aren't working. It can never be blocked, which is why operators say it is good in disasters.

"When all else fails, ham radios work," said Betsy Doane of Shelton, who oversees the 2,500 members of the league in Connecticut.

David Patton, an official with the radio group, said as many as 750 volunteers may be needed. The Connecticut volunteers are going to help

provide communication support for more than 200 American Red Cross Shelters in Mississippi, Alabama and the Florida panhandle.

"There are limited resources to an overwhelming disaster," said Allen Pitts, public relations manager for the radio league. "So there is not a ham on every corner. The hams are put where they are needed most of all, in emergency traffic or for saving lives."

Dennis Motschenbacher of Colchester was among the first volunteers to say he would go. He spent Sunday shopping for supplies and getting ready for the 18-hour, 1,100 mile drive to Montgomery, Ala., where he will be dispatched to a shelter.

"Everything I need, I'm bringing," he said. "There won't be any Radio Shack to go to."

The 57-year-old has been a ham for more than 40 years. He has operated his radio from places as far as East Timor and the Balkans.

The hardest part will be "seeing people in this troubled state _ smelly, sick, depressed, angry. And no matter what any of us do, it won't be enough for all of them."

Ham Radio Operators Pitch In To Hurricane Katrina Relief Effort General Interest
09/07/2005
With communications out all over New Orleans and the Gulf Coast, the professionals are turning to amateurs to be their ears to what's going on in the areas devastated by Hurricane Katrina.

Local operators say they've been in touch with people in and around New Orleans since the beginning of the ordeal.

Ed McLaughlin, of Kennewick, says in the days that followed the disaster, he was able to help a family in Medford, Ore., get an update on how their relatives were. He's provided similar contact for a family in Chicago.

The reason-- ham radio, which is able to get in places that have no other means for communication when land-based infrastructure fails.

Ham radio has been such a success during these recent days that FEMA and the Red Cross are now using it as their primary mode for communication until other modes of communication are restored.

News-Leader.com Springfield Mo.
Ham radio helps close communication gap

Nixa man relayed message from president to New Orleans' mayor.

Joe Hargis works on his amateur radio in his home in Nixa. Hargis helped rescue an elderly woman by notifying someone who could contact rescue

workers via radio.

By Sarah Overstreet
News-Leader

If you've been unsuccessfully trying to get information about someone living in Hurricane Katrina's region of havoc, here's an avenue you may not have considered: local ham radio operators.

While cell phones rely on towers and traditional telephones rely on intact land lines, ham radios transmit from radio to radio, bouncing waves off the ionosphere in the upper atmosphere far above the Earth's tantrums. They can run off batteries, generators and sometimes even the sun.

Two Ozarks amateur ham radio groups - the Nixa Amateur Radio Club and the Christian County ARES (Amateur Radio Emergency Services) - have been relaying messages from people all over the world to those whose communication has been cut off by Katrina.

David Beckler, a ham radio operator from Nixa, even relayed a message Tuesday from the director of the Federal Emergency Management Agency in Texas to New Orleans Mayor Ray Nagin.

"He had a message from President Bush to the mayor of the city of New Orleans," says Beckler, a New Orleans native who moved to Nixa six years ago.

Since the message was an emergency communication, the dispatch needed to go through the net control station on an emergency frequency, Beckler said. He knew it was important, because the ham operator had said, "break, break, break," which requires all other communications to yield and give that one priority.

"The net control station or other stations on this frequency could not hear this message," Beckler says. Beckler contacted the net control station, and people there asked him to contact the sending ham operator and relay the message back to that operator. "That's when he told me it was from President Bush."

Joe Hargis, another Nixa ham club member, also helped with an urgent message. "I was monitoring the SATERN network (Salvation Army Team Emergency Radio Network)," said Hargis, a retired elementary schoolteacher.

"A person called in with a piece of emergency traffic and the (receiving) person could not hear him. He said, 'Is there anyone on the frequency who can copy this?' I broke in and told him I could hear it fine."

Hargis relayed the message back to SATERN, and the operator there could hear Hargis well. "It was a 90-year-old woman and her elderly neighbors. They were afraid to leave their home because of the unrest in the neighborhood, things that were going on, and they needed assistance to be evacuated. They were running low on medicine, and one was running out of her oxygen supply."

Nixa ham club member Rod Kittleman says their members helped save the lives of a couple in New Orleans.

"A weak, disabled elderly couple were trapped in their attic. Their phone worked, but they couldn't get through to local authorities," the KADI radio program manager explains.

Too weak to break through their roof so emergency personnel could find them, the couple called their daughter in this area. She contacted the Nixa club, which relayed the message to a local ham operator who is licensed to operate on emergency frequencies.

"He got through to authorities in New Orleans over the radio, and they were rescued. (The ham operator) relayed the message back to their daughter. That's the reward we live for."

ARRL's Role In Rescue Offers Lessons For Future

Mark David
ED Online ID #11164
October 13, 2005

Investigations into the communications breakdowns in our national emergency response systems continue. Yet I'm struck by the contrast between the hue and cry for upgraded infrastructure solutions and the much quieter revelation that old-school ham radio provided the only trustworthy communication during Hurricane Katrina.

New Orleans emergency departments' radios were wiped out when broadcast towers lost backup power generators. Police and fire departments only had citizen-band radios, offering inadequate bandwidth. Emergency responders lacked coordinated frequencies.

The National Guard cited antiquated communications technology-as a contributor to its delayed response. Lt. Gen. Steven Blum told USA Today that there was a shortage of high-tech radios and satellite communications gear. "We were underequipped," Blum told USA Today. "We don't need tanks and attack helicopters... but we must have state-of-the-art radios and communications."

The Guard has historically gotten "handmedown" equipment from active-duty military. It now uses "Vietnam-era radios while it needs 37,000 newer radios," according to Guard budget briefings.

Meanwhile, ham radio operators proved that older technology can be the most reliable technology. Our EDA Editor (and ham) David Maliniak wrote an online column on the subject, pointing out that sometimes "old works when new doesn't." (Read it and add your comments at ED Online 11136.) During and after Katrina, hams running on generators (sometimes with makeshift antennas) worked throughout the hurricane zone to put emergency stations on the air. They guided rescuers to stranded victims and updated weather services via the Hurricane Watch Net.

Amateur radio was the primary means of contact with the outside world for many shelters. It's estimated that some 1000 amateur radio

volunteers helped serve the hurricane-ravaged communities and shelters, even providing communications for the Red Cross.

Still, the real lesson of the ham radio successes isn't that old sometimes trumps new. Upgraded, reliable hardware is vital for adequate emergency response. Amateur radio has continued to upgrade too. Hams use satellites, digital systems, cross-band repeaters, and more. As the American Radio Relay League (ARRL) puts it, the Morse code key may still be on the desk, but generally it's next to a modern system operable under extreme emergency conditions.

DISTRIBUTED NETWORKS

Katrina taught two key lessons. First, the Amateur Radio Emergency Service (ARES) organization proved effective because hams don't depend on a centralized infrastructure. When cell towers, phone switching centers, or other central communicationsnetworks are down, hams aren't. Many operators have their own generators and are ready to fire them up to get on the air when there's no power. National disaster response plans must assume that the centralized communications infrastructure likely will be crippled, so the emergency system must include a distributed or "mesh" networking scheme.

Second, ARRL succeeded because operators subscribe to a mission that comes with their licenses-to be ready to provide emergency communications whenever and wherever they're needed. ARES has a well-conceived action plan coordinated through the Radio Amateur Civil Emergency Service (RACES). ARES is part of the ARRL, and RACES is coordinated through the Federal Emergency Management Agency (FEMA). But like the broacast system, the emergency plan is decentralized. Radio operators can work independently to serve their community as circumstances require.

A decentralized emergency plan requires deputized people who truly understand and care about their responsibilities. The best emergency response relies on distributed manpower, with first responders empowered to make decisions at the scene of the crisis.

It doesn't take a federal investigation to realize that the government's emergency-response debacle was caused by centralizing the decision-making with politically appointed bureaucrats who didn't have a personal mission or a true sense of ownership in ensuring preparedness. The fiasco with now-deposed FEMA leader Michael Brown exemplifies the folly of appointments based on cronyism, rather than the recruitment of people who have a passion, understanding, and commitment for the responsibilities they shoulder.

In this issue's cover story, Ron Schneiderman looks at government programs and the new technologies tackling our homeland security problems. But will the right people get those technologies? Too often, homeland security appointments and dollars are doled out according to political favoritism. As we saw in the recent emergency response,

technologies are only effective when managed by people-like the hams-who take their responsibilities to heart.

Hats off to all of you who care about the quality of the security and emergency communications technologies you're engineering. Let's hope they end up controlled by people who care just as much.

A few months ago, NBC's Tonight Show staged a race between a pair of ham-radio operators with Morse-code keys and a couple of kids with text-messaging cellphones to see who could communicate faster. The hams won hands down, proving, in the minds of some, that old technology could hold its own against new. In recent days, ham radio was put to the test again by Hurricane Katrina. This time, however, lives were at stake.

In the world of design engineers and electronics in general, change is essential. Designers work diligently to make the fruits of their labors obsolete almost before they see daylight. The turnover in technology is sometimes like a flood, with old being washed away by new over and over. Often, the new beats the heck out of the old. But there are times when old isn't necessarily bad; in fact, sometimes old works when new doesn't. And then we're glad that old is still around, or at least we should be.

Wireless technology, while relatively new to many consumers, is of course not new at all. A few (very) old-timers remember the original "wireless" of radio. The revolution wrought by the pioneers of wireless changed the world then, and the technology behind that revolution has been re-invented and re-applied time and again. Its pre-eminent incarnation today is our near-ubiquitous wireless communications infrastructure, which has freed us from the shackles of landlines and made our mobile lifestyles possible. Technology truly is great stuff.

Until, of course, a monster hurricane comes along to render it nearly useless. Here we see a scenario in which a flood literally swept away the new. As Hurricane Katrina's fury hammered the Gulf states on August 29, the communications infrastructure took a devastating hit. Telephone service, including wireless, became at first intermittent and then unusable in many localities. Where there was phone service, 911 switchboards were often unreachable due to the massive volume of calls. The response of local authorities, now termed "confused" by deposed FEMA chief Michael Brown, wasn't helping much. The Gulf Coast was about to descend into darkness, chaos, and, worst of all for many, silence.

But proponents of the old were at the ready. The "old," in this case, is ham radio. In the eyes of the "man on the street," ham radio has a pretty stodgy reputation. Aren't hams still using Morse code? Don't some of them use radios with tubes, for goodness sake? What the "man in the street" probably doesn't know is that it was amateurs who advanced the radio arts early in the 20th century. Down through the decades, amateurs have embraced (and often driven) all of the innovations in wireless technology, up to and including all digital modes and the Internet. But many have stayed in touch with their roots, which is good old-fashioned

analog HF operation. And while amateurs have a longstanding tradition as innovators and experimenters, they also have a mandate that comes with their licenses: to be ready, willing, and able to provide emergency communications whenever and wherever they're needed.

As Katrina bore down on the Gulf region, amateur radio operators, under the aegis of the American Radio Relay League's (ARRL's) Amateur Radio Emergency Service (ARES), prepared to swing into action with emergency networks that would run health-and-welfare traffic into and out of the disaster zone. As early as the Monday following the storm, hams throughout the hurricane zone were putting emergency stations on the air. In one instance, hams were instrumental in the rescue of 15 people clinging for life to a New Orleans rooftop. Meanwhile, in Alabama, amateur SKYWARN weather nets kept the National Weather Service apprised of conditions throughout the state. In hard-hit sections of Mississippi, hams running off generators and with makeshift antennas were the only means of communication, getting word to out-of-state friends and relatives concerning their loved ones.

There were numerous other instances of hams helping those who were not simply inconvenienced by the storm, but whose lives were in imminent danger. Now that things have calmed down in the Gulf region, many of the emergency nets have stood down. But hams continue to serve the public in the many areas that are still without power or phone service.

As our nation collects itself in the aftermath of the Katrina disaster, President Bush has promised federal reviews of what went right and what went wrong. One of the findings of those inquiries should be that the federally-instituted Amateur Radio Service, which functions under the licensing authority of the FCC, stood tall when the country needed it.

Amateur radio currently faces various threats to its existence. Chief among those is the advent of broadband-over-powerline (BPL) technology, which, if broadly adopted, has the potential to cause widespread interference to HF communications, not just for amateurs but for other services that use the HF spectrum.

Amateurs and the ARRL have made a lot of noise about BPL, asserting that it could seriously hamper their efforts and those of relief agencies such as the Red Cross and Salvation Army, in the event of a disaster such as Katrina. It's rumored, though, that the same FCC commissioners who have given their blessing to BPL field trials will now take a much harder look at the technical issues concerning BPL and its interference potential in the HF spectrum. Let's face it: The federal government didn't handle the emergency in the Gulf very well; it'd be prudent for it not to sanction a technology that could impede one of the few things that actually worked.

Many readers of this newsletter are amateur radio enthusiasts. If you are, and if you haven't already done so, consider writing your congressman to express your concern about the future of the Amateur Radio Service, especially in light of its outstanding efforts in recent

days. Remind your elected representatives that a vibrant and unimpeded Amateur service can and will be a lifesaver when disaster strikes. Also, consider how you yourself might help. What if a hurricane, tornado, or earthquake ravages your area? Are you prepared to get on the air without relying on the mains to handle emergency traffic? Get in touch with your local amateur-radio club and find out how you can pitch in.

Your cell phones and wireless routers are indeed great stuff, but so is a good old HF transceiver. We shouldn't always be in such a hurry to let the flood of new technology wash away the old. The geek down the block with all the antennas on his property could turn out to be your best friend someday. Because sometimes, old trumps new.

Lol... I know America has vast areas compared to the UK but don't you think Police could have been equipped with CB radios in NO? I remember hearing the police bands were knocked out but I don't know whether they could talk radio to radio (Like CB) or if they needed to talk via a base. Obviously police couldn't have been issued with Amateur Gear (because they would be illegal operators) but CB stuff they used to use years ago would have assisted them greatly in that respect. Most of the squeaking you refer to would be gone due to base stations being off and cars being flooded. It would have to have been an organised person who remained on the air unaffected. Most of the CB fraternity would have heeded the evacuation call and got out or.. as so many Amateurs like to think of us, robbing the shops and being all lawless like. It must, in reality, have been a very scary hellhole for a lot of people and I certainly hope I never go through it.
I think all in all, joking aside, CB could have had (if it didn't anyway) a great part to play alongside Amateur radio in the relief and Police co-ordination efforts.

Regards,
Graham

The governor was only confirming what many of us in this hobby realize:

Ham radio operators have not served any useful purpose in emergency communications for a long time. The professionals pretty much ignore them. At most they talk to one-another in health and welfare nets and if someone actually calls in with an emergency all hell breaks loose because everyone wants to talk personally with the ham calling in.

Hams have this vision of themselves as the emergency communicators who while huddled in a dark storm beaten shack will get through to the outside world and save the day by using a car battery and some jury-rigged cw setup. And the hams on the outside see themselves as the unique link on the other end who will alert the authorities and direct them to the site before anyone else can because they alone have a connection with the emergency site. It's little more than mental masturbation folks 'cause the real world doesn't work that way.

4559. Re:"Can twisted wire replace shielded wire?"

Newsgroup: rec.radio.shortwave
Date: 2005-11-27 22:57:43 UTC
From: r2000swler@hotmail.com
Message-ID: <1133132263.778588.22640@g47g2000cwa.googlegroups.com>
Source record: 51309

I was going to stay out of this fight,but it has just gotten too silly.
So;"Can twisted wire replace shielded wire?"
The simple answer is yes.
But there is a big BUT.

In a very quite RF locaiton, like the middle of the woods where there are no electric/phone/CATV lines, no TVs, no motors, no flourescent lamps a "twisted pair" can work ery well. Slightly lower losses, but my experiments in such a RF quite locaiton show no practical or detectable effects for LF through F (say 50KHz through 30MHz).

If you have any RF noise sources, in many cases this will include your receiver as many modern recievers have some (to a lot) of RFI potiential,
you will need to reduce the noise that gets into/onto your signal.

Balanced open wire, AKA "ladder line" is better then twisted pair as far as
line losses are concerend. But open line is more susceptable to ingress unless
great care is taken to keep it well away from "anything" that will cause imbalance.
Sadly the "anything" really means anything. At LF through HF the effects aren't
all that important.

A trick I learned back in the days of tall towers for VHF an UHF TV antennas was
to put a 1 twist per foot in the twinlead. This often greatly reduced ghosting from
very bad to not visible.

So back to the orignal question:
"Can twisted wire replace shielded wire?"
Yes, under the right conditions. But in the real world, at least where I live, Coax,
or Twinax or Triax, is much better because it reduces any additional noise I could
pick up as my lead in leaves the antenna and reaches my receiver. I have used
common twisted "bell" wire when I didn't have coax and if the location was quite, it
worked great.

The real question is not can twisted wire be used, but how well can you isolate

twisted or parallel(think lamp cord) from your noise generators. It
can be done,
but coax is a lot easier to keep quite.

I have enough RF noise that I can't reduce, there is no way I want to
add any more
RF crud to my 1uV signals.

Terry

I have an HF-150, which is a fine receiver and an excellent piece of
sculpture. I just don't consider something that eats 8 AAs in 3 hours
''portable''.

Ever price one of those cable boxes? They probably don't cost much to build, but if you go to buy them, they're on the order of $300-$400, at least the addressable ones. The cheapies, that do no decoding still run into the $100+ range for one that doesn't break in a month or two.

So far as I can see, this is not an electric lamp, but a trim ornament, a
Christmas BALL, not BULB.

Nope, it's *only* a USB connector, the signal goes to the computer
digitally. In fact, on mine it's only labeled "USB". I believe the
picture in the article is actually a G303e, the previous model, which
does supposedly have an option to use RS232 and an analog IF output.

Quite true if you define DC resistance as the applied voltagr divided by
the, (constant for an infimite line), charging current.

As a practical matter, to match a generator to a given line, you can use
a long length of co-ax cable to simulate a load at the cable's
characteristic impedance. The line needs to be long enough to have
~10-20 db loss at the frequency in use.

I use rechargeables. Multiple sets of them. Changing them is very easy.
It works. You might also consider buying larger capacity rechargeables.
They will last longer in your 150. If you're unable to grasp these
concepts, by all means spend $500 on an E1.

Well, if such battery consumption is typical for the HF-150, then
you've certainly got a point there.

Do you or anyone else have an idea of how the E1 is on battery
consumption?

It's not even a light, it's just an ornament, and the swastikas aren't the Nazi version. The article calls the ornament a "babushka", and from what I can see of it in the picture it looks like the design of a traditional Russian matryoshka doll. I don't think Russians would've put swastikas on it on purpose. I have no idea whether any Russian ethnic groups used swastika-like symbols.

It's people like that with their jumping to conclusions and with their delusions that cause all the crap and the lawyers and media just eat it up. What a bunch of aholes. You watch! It'll be against the law to make any little swirl that might resemble a swastika in our schools or sell anything that remotely looks like a swastika and this hyper attention to a non issue will create another red flag for racism and hate. Oh Boy!!

The swastika is an ancient cruciform that had been used extensively before
it was perverted by the Nazis.

I think it's battery consumption is comparable to that of other portables, though of course it depends on volume level and so on. However, my understanding is that, if you listen to XM while using batteries, they'll probably only last around four hours or so. I believe there's a lengthy discussion of the E1's battery consumption on the E1 group on Yahoo.

I'm curious, for SW reception, does it work well with a portable (like, say an SW77 or Satellite 700), as well as with your tabletop receivers? Size-wise and being optionally battery-powered, it looks like an attractive option for portable applications (certainly for, say, a Drake SW8 or something of that calibre), but I'm wondering if it's just too much an antenna for a portable...

>Jeeze.
So why are you all freaked out?

''REVIEW:
A transmission line is a pair of parallel conductors exhibiting
certain characteristics due to distributed capacitance and inductance
along its length.
When a voltage is suddenly applied to one end of a transmission line,
both a voltage "wave" and a current "wave" propagate along the line at
nearly light speed.
If a DC voltage is applied to one end of an infinitely long
transmission line, the line will draw current from the DC source as
though it were a constant resistance.
The characteristic impedance (Z0) of a transmission line is the
resistance it would exhibit if it were infinite in length. This is
entirely different from leakage resistance of the dielectric
separating the two conductors, and the metallic resistance of the
wires themselves. Characteristic impedance is purely a function of the

capacitance and inductance distributed along the line's length, and would exist even if the dielectric were perfect (infinite parallel resistance) and the wires superconducting (zero series resistance). Velocity factor is a fractional value relating a transmission line's propagation speed to the speed of light in a vacuum. Values range between 0.66 and 0.80 for typical two-wire lines and coaxial cables. For any cable type, it is equal to the reciprocal (1/x) of the square root of the relative permittivity of the cable's insulation.''

I think it's around 40-50 hours on a set of alkalines. The XM antenna
will reduce that by 75%.

++++++++++++++++++++++++
Just for grins lay a 100' of twisted leads, lamp cable and coax out on
the ground.
Attach 50 Ohm resisitors at the far end of each.
Swtich from one to the other and see which one picks up the most RF.
MW stations will be received very well with both the twisted pair and
lamp cord.
Very close/strong MW stations may be recieved with evenpoor quality
coax.

Next build one of these to go between the feedline and your receiver:
<http://www.dxing.info/equipment/coax_leadin_bryant.pdf>
Repeat the experiment.

If your results are anything like mine the twisted pair and the lamp
cord will
still have significant reception.

True "common mode" only occurs when there is perfect balance between
the
conductors, with no "realworld" artifacts to effect that balance.

The results I provided are real world, not from some SPICE simulation.

I tried this with both a R2000 and a AOR 7030+. And I got nearly the
exact
same result with the AOR giving slightly better MW rejection with the
coax
and the in line filters.

I preffer to use real world experiments whenever I can.

I was surprised at how little difference the quality of the coax, or
even the
Z mattered. I expected no measurable difference between 50 and 75 Ohm
coax.
But even 93 ohm, low capacitance, coax acted the same. And the type of
shield
made no difference. By type of shield I am reffereing to: single braid,
double braid,
braid + foil and even some real cheap foil and drain only.

I even did a repeat of this test at a ham friends QTH where he was putting up a
repeater and had about 200' of hardline stretched out on the ground. Worked pretty
well, but I had to add the chokes in the PDF link I gave.

Now Triax did make a big difference. But only if you only grounded it at one end,
the receiver end being about 20dB better. And Triax did not benifit from the common
mode supression. It amde no difference.

Terry

Tha article says California-based. The CEO has a Middle Eastern name.

'''"Eton is independent of Grundig Germany and is a licensee for Grundig AG shortwave radios in the North American markets, as well as certain markets outside of North America except EEC markets," explained a news release issued shortly after Grundig's April bankruptcy by the Palo Alto, California-based radio firm.

"Eton, as an independent company, will continue to supply products and fulfill all obligations to its customers as usual."

Eton won't just continue to sell Grundig-branded shortwave radios in North America, but it will likely also remain the continent's dominant player. Thanks to the business savvy of founder, president and CEO Esmail Hozour, Eton has transformed North America into "the one region in the world where Sony is not number one," said Larry Magne, editor-in-chief of Passport to World Band Radio.

The company "has taken the market, and walked away with it. They own North America, pure and simple," he said.''

I didn't even realize that there was an H900. LF Engineering doesn't list it on their website, but I see that it's on Grove's site (and that Grove is the exclusive distributor of this unit). The product information for the H900 doesn't indicate that it can be run off of batteries. I wonder if this was just an omission...?

It looks like the H900 only works with the plug in adapter because of power consumption... no battery option. (although I would probably make my own external batter pack for it)

The H-800 is a great little antenna. I have one. It will work just fine with an SW77 or comparable portable, so long as the receiver in question has a reasonably good attenuator. In my experience, the H-800 is dynamite on MW and up to around 5 mhz. It's good from 5 mhz up to around 15 mhz, and it's performance gradually tapers off from there. At any rate, this is how I remember it...I haven't used the H-800 very much since switching over to a Wellbrook loop. It's a very good value, though. Doesn't get the attention it deserves, in my opinion.

The 390s have a great noise floor when properly tuned up. Other than that,
a modern PLL receiver has many more features.

Thanks Axelrod for the link to the review and thanks Steve for your impressions of the H-800. Since LF Electronics seems to tailor a lot of their products toward lowfer and MW BCB listeners, I had thought that it might well be the case that the H800 would exhibit better performance in the lower frequencies than the higher frequencies of the SW spectrum. Since my interest is primarily in HF, it seems that, although it might offer some improvement in the 120 and 90 meter bands, the H800 likely would not offer significantly improved reception over the AOR WL500 antenna I already have (unless we're talking about outdoor mounting of the H800 away from a noisy indoor environment).

The WL500 is a nicely made antenna; nice performance across the SW spectrum. Easy to set up and decent on battery consumption, too. Unfortunate that AOR discontinued this fine product.

Well, the Wellbrook loops get some pretty nice reviews in Passport to
World Band Radio. Given Wellbrook's lack of any distribution in the
U.S. & Canada, it's sometimes a little surprising to see how many North
American SW listeners on this newsgroup are using Wellbrook loops.

Had a similar thing (a bounced check, actually) with a guy in another city
in Ontario. I sent an email to the police chief in his city, who apparently
called him and 'sorted it out' - I did eventually receive my money. As
Keene seems to be a suburb of Peterborough, ON. you might try: (
http://www.peterboroughpolice.com/).
YMMV of course.
Good luck. Haggis.

BiG? That would be quite a trick around here. Everyone has to use
Propane because there is no underground distribution system.

I saw a recent news story where BPL was shut down in one city because
of technical problems were costing more than they could expect to
recover and that the system was being dismantled.

You have a primitive basic mentality zundels case is a political manipulation from the holocaust industries. Looks more like your mentality is inherited just as it was with your ancestors in the middle ages were people did get tortured and killed for not believing in the holy ghost. Do suggest that all that do not believe in your holocaust are holocaust deniers is a symbol of your Jewish falsehood and deceit.

Kurt Knoll.

Thank you David. I'd say best portable ever & I've been DXing since 1965. Have heard on it many Latin Americans & Africans below 8 MHZ with just the whip. And on MW (AM BCB), during Oct, had audio on 28 Trans-Atlantic frequencies- Europe, Africa & Middle East, using the small Radio Shack loop. George S., MN

I think 111 memory pages each have country name for up to 10 frequencies, plus there are 500 alpha-numeric frequencies where one could enter station & time or whatever, & on those the settings are remembered like sync on/off, AM, LSB or USB, bandwidth, even PBT offset. I actually hope to use most of the presets, they stay stored indefinitely. George S., MN

5 Newsgroups?

and my set top box was free when I signed up. I get excellent picture
and sound and no interferrence between the ham stations (One in the
shop and one in the house). 1.8 through 440. Legal limit 1.8 through
30. 100 watts out on 50 MHz and 200 watts on 144 MHz.
I'm running an Alpha 76A in the house for HF and a Henry 2K-4 in the
shop.

Remember Digital is not necessiarlily HDTV, but they will be moving up
out of the VHF bands.

BTW, the computers and ham rigs are less than 3' apart and the network
cable runs with the coax cables for a ways.

I can run a 2-meter HT on the desk with the computers running although
if I get within about a foot of this one it will open the squelch.
Still I can set the HT next to the left side of the monitor and it
works fine.

Tain't nearly that bad. It depends on what bits are missing, but what
happens it the picture will start to break up if enough of the right
bits are missing.

You do need a good UHF antenna for local HDTV at present and probably
will for Digital as well. Rabbit ears definitely will not cut it. and
if you live near woods it's likely a small antenna on a roof mounted
tripod won't either. I get a reasonably good signal for 60 to 90 miles
and do copy one station quite well from nearly 100 miles (Traverse
City), but their digital antenna is out this direction so I'm not sure
just how far it is to the antenna.

>

Yup. Free.
Both my cable box and my digital satellite box were free with a years
subscription. Actually the same went for the cable modem at 3 Mbs
with free installation which meant running almost 200 feet of cable .
It's a 130 feet from the pole so that's 160 feet and there are 3 drops
in the house so I guess it's a tad more than 200 feet along with 3
splitters which are cheap.

I'll probably keep right on using the one old 37" analog set down in
the basement until it gives out. The tuner gave out long ago, but I
use it as a monitor with the VCR as the tuner.

Thanks for the reply..

I would guess that an r-5000 may be tough to lug around easily like to
the office, living room, patio, and wherenot ...

QSL,

I'm looking at the Eton E1 on some sites. Is there a best vendor
online/walk-in to look towards for purchasing RCVRs. Universal Radio
is selling the E1 for $499.95 from what I can tell.

It never ceases to amaze me how many times people come here to post "beware" messages but didn't take the time to
search for them before blindly sending money to a stranger.
Not that it's foolproof, but one search would have saved the trouble in this case, several times over.
Sorry for your loss and wish you well in the recovery. Getting ripped sucks.

The problem is that Google invested $100,000,000 in BPL. With that kind of money it will suceed even if it fails. The only way to prevent it is to boycot Google and sites with "ads by Google" and let them and their advertisers know it.

Geoff.

You should have boycotted Google while you could, now Google supported
BPL is in action. Time is running out on worldwide radio communication.

-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

Thank you to all who have responded so far.

This is a final call for participants to contribute to our shortwave
sound-art project.

We need more amateur radio operators world-wide who can transmit a
message for reception in North America / Pittsburgh PA at 7:30PM on
the third of December 2005.

We will be running a test shortly. All participants will be sent a
special sound file with which we will be performing a dry run before
the night of the performance.

If you are able to assist us in this project, please contact us
immediately at irdial [at] gmail.com.

We look forward to working with you on this project!

Wasn't aware of the portability issue. That said, the R-5000 runs
easily on 12 volts and a simple wire or an amplified whip antenna will

provide lots of signal.

To be honest, I would stay away from the high-priced receivers from Eton/Grundig. Products from that company seem to have more than their share of quality control problems so if you go with something from them minimize your risk of loss by buying on the lower end.

Or, look at a Sony 7600 which is very portable, does ssb and voice very well.

Jack, the best advice is contact the local RCMP office in that area and ask how to file a complaint. Before you do make sure you have a copy of the postal money order showing that he cashed the money order. If you purchased the money order from the US Postal Service then you should also contact them regarding mail fraud. They may refer you to the Canadian postal service but who cares as long as you get someone to take action. Do not let it drop as someone else will get ripped off next. Let us know how you make out.

Oregon Mike,

The one draw back of the Eton E1 Radio is that it
does not have a carrying Handle.

Suggest that 'if' you are going to be Carrying the
Eton E1 Radio around you get a Soft-Case built
for a Lap Top Computer.

IMHO - It is worth protecting your Investment in
this $500 'portable' AM/FM Shortwave Radio.

something to think about - e1'ing you all ~ RHF
. . .
.
. .
.
. . . Out !

Yeah, I'm surprised that the people at Wellbrook haven't worked out a distribution deal with, say, Universal or Grove.

It's also worth mentioning that I've heard good reports about the RF Systems MTA vertical antenna, which is available through universal. It's about seven feet tall, as I recall, and is passive and apparently extremely quiet. However, if you have the space for it, the MTA is probably worth considering. I'm not sure how it would compare with the H-800, but someone else in the group might know.

Steve

Active whips with good dynamic range are extremely easy to homebrew- and
excellent article appeared in QST a couple years back using a CATV
transistor- better IP3 than likely any of the consumer antennas available.
Seem to recall that FAR Circuits has the PC board.
Don't forget a good RF ground at the antenna- without it, the outside of the
coax shield becomes part of the antenna- transporting house noise out to the
pick up probe.

As I understand things, the fraud only becomes postal fraud if the order was placed by US mail. The order was placed over the internet, and the postal transaction was simply: you mailed a money order, he received a money order. Nothing fraudulent about that.

Money orders are a very bad deal for the purchaser, and a very good deal for fraudulent sellers.

The question was about AM mode. There's no bells and whistles on an
R8B that make it better than an R-390A for AM radio.

Statement: "As I understand things, the fraud only becomes postal fraud if the order was
placed by US mail. The order was placed over the internet, and the postal transaction was simply: you mailed a money order, he received a money order. Nothing fraudulent about that."

Incorrect: If someone is cheated, it is fraud. What you describe is illegal. Whether a small transaction will be prosecuted has to do with how overloaded the police department is. There are obviously other problems, since you are a witness and not local. But, simply because someone is not prosecuted does not make it less fraudulent. Posting an item for sale and receiving money for it in any form without the intent to perform is fraud, pure and simple.

I gather this was not an ebay deal. I never do any deals via mail on
used gear that doesn't have some sort of auction house in the middle.
There are plenty of jerks who read usenet, figure out what is a popular
item and then pretend to have one for sale. A DX394 or Sony 2010 would
be prime bait.

Very much an issue with the Satellit 800, which was put together by the Tecsun folks in China; but I hadn't heard of quality control issues with the E1, which is put together by your friends at Bharat Electronics, an Indian manufacturer of defense and civil communications products. The E1 has been out on the market for a number of months now... have there been quality control issues to emerge?

This was one reason why I have opted to wait it out a bit before purchasing an E1: to see if a shakedown was in order. Kept my fingers crossed that this wouldn't be another Satellit 800, in that regard. But from all indicators I've seen thus far, the E1 seems consistently solid in build quality (thankfully).

having a
> new hole ripped in ones posterior.

Where it counts, it did. The review admitted that the 350
got the editor's choice because it had the best audio
south of a Sat 800, not because it was a single conversion
powerhouse. In the shortwave reception department,
the improvement from 2005 to 2006 was that it's a bit
more stable, but it still has images and in the modern
day and age, a $150 single conversion receiver is a bit
cheap. Hell, my DX-440 is a double conversion receiver,
and it ran for $199 (or $149 on sale) back in 1989, with
(nowadays) older technology. The fact that in the
guts of the receiver the only thing going for it are
looks and sound does not bode well. You take away
the sound, you take away the Editor's Choice designation.

Doesn't matter. Several years ago I had a scumbag in Conn. rip me and I paid with US postal MO. The post office had me fill out papers etc.. They never did anything and I bugged em about it for two years, nothing! I went the whole wrought and reported it to Bridgeport police filed every complaint in the book, nothing. And they wonder why people take the law into their own hands.

For the record. Morse code is not a boy scout requirement
at all and in my several years as a Boy Scout Leader (my son
went all the way to Eagle) I never met another scout leader or scout
who knew morse code.

Even in the boy scout Radio merit badge requirements,
morse code is an "ellective" requirement
which any scout may pick to do out of a list of several
Radio merit badge requirements.

Cheers,

There was a time when "some" USA
police forces had CB Ch 9 monitoring
capability. I recall seeing highway signs stating that to
be the case, but its been a long time since I remember seeing
such signage. I doubt many of those still do today.

> I remember hearing the
> police bands were knocked out but I don't know whether they could talk
> radio
> to radio (Like CB) or if they needed to talk via a base.

It depends on the radio system being used. If it is
a repeater based system, odds are that rules out
direct car to car capability.

> Obviously police
> couldn't have been issued with Amateur Gear (because they would be illegal

I don't recall even reading about any incident where CB was
used at all. That doesn't mean it didn't happen
somewhere, but it certaily appears that any CB activity
was minimal at best in comparison to the role that amateur
radio played.

Cheers,

I didn't say it wasn't fraud! I said it wasn't *postal fraud*. It was internet
fraud, and that is not handled by the postal police. That a money order
was used for payment is immaterial.

It is a shame that you aren't experienced enough to know that postings don't arrive in the same order everywhere that they arrived on your Outhouse Express screen.

If you want anyone other than just you to understand your silly assed comment, you are going to have to quote the article you are commenting on.

I suppose you can consider it most anything you like... What the law considers it is probably an entirely different matter.

The internet confuses legal issues quite a bit. A posting that started in NY, and was read in LA might very well have traveled by way of Canada, or Mexico, or satellite, or Nigeria, or timbukto ... It could also have traveled over the phone lines, cable lines, through the air as wireless traffic...

Is the crime interstate, intrastate, federal, telephone, cable, or international?

Is Defeat Now an Option?
by Patrick J. Buchanan (Nov. 28, 2005)

"Is the United States now going to cut and run in Iraq?" asks Bronwen Maddox, foreign editor of the London Times.

While the answer from President Bush remains a defiant "No!" the question is now being raised by the most hawkish of his backers. And understandably so. For John McCain's call for sending 10,000 more troops to Iraq has been met with polite silence, while all signals out of this city point to withdrawal, beginning in 2006, of scores of thousands of U.S. troops, whether the insurgency has been defeated or not, whether an Iraqi democracy is assured or not.

Consider these events of Thanksgiving week:

On Sunday, Nov. 20, Secretary of Defense Donald Rumsfeld confirmed that Gen. George Casey, U.S. commander in Iraq, had submitted plans for a reduction of U.S. forces from the present 160,000 to fewer than 100,000 by the end of 2006. When asked if that was possible, Rumsfeld, replied, "Yes, that's possible."

On Monday, 100 Sunni, Shia, and Kurd leaders from Iraq met in Cairo and called for a timetable for U.S. withdrawal.

Wednesday, the Washington Post led the paper with a story on Casey's plan to withdraw the 60,000, and Secretary of State Condi Rice told Fox News we need not maintain present troop levels "very much longer," as Iraqi forces, which now number 200,000, are "stepping up" to the job. A gradual pullout could "come fairly soon," said Rice, the number of troops "is clearly going to come down." She added, "I think that is how the president will want to look at this."

By Thursday, the Pentagon confirmed that troops would be coming home after the December elections and, if conditions improve, U.S. forces could be drawn down by 60,000 before the end of 2006. Said Fred Barnes of the hawkish Weekly Standard, "These events are ominous . they suggest that troop removal has superseded victory as the primary American concern." Indeed, they do.

Moreover, our principal coalition partners after the Brits are coming out. Silvio Berlusconi has said Italy's 3,000 troops may be home by the end of 2006. South Korea is pulling out a third of its contingent. Polish forces, cut from 2,400 to 1,400 in 2005, may soon fall below 1,000.

If no more troops are going in, and the only question is, how many U.S. and coalition troops are coming out, starting after the December elections, the conclusion seems inescapable: The United States is disengaging from the Iraq

war before victory is at hand, or even in sight. Hence, a defeat, not of American arms, but of the U.S. policy in Iraq, is now a distinct possibility.

The signs America has had enough are everywhere. Bill Clinton now calls the war a "big mistake," an opinion shared by 60 percent of the nation. Thirty-nine Senate Democrats voted for an exit strategy, with timetables. Half the country wants withdrawals to begin. Only a third of the nation approves of Bush's war leadership, while 42 percent, in a Pew poll, want America to start minding her own business.

Bush has three years left, but the time is approaching when debate on a new U.S. foreign policy for the post-Bush era must begin. One lesson from this war is already clear: Americans will not long support spilling the blood of their soldier sons in a war for ideals like democracy in the Arab world unless they are convinced national security or U.S. vital interests are imperiled.

Months back, as opponents of the war became the majority, I predicted a Gene McCarthy would rise to lead the antiwar movement. No one expected it to be Rep. John Murtha, a combat veteran with 37 years in Marine Corps service. But Murtha's emotional call for withdrawal has proven a catalyst for Congress and the country.

The argument suddenly seems over and the nation appears to have reached a consensus: earliest possible withdrawal of U.S. forces from Iraq, consistent with the avoidance of a strategic disaster.

But here is the rub: We are not going to get out of Iraq without suffering terrible consequences for having gone in. And when we come out, we no longer control what goes on within.

Once we depart, there is no guarantee the insurgents will be defeated, no guarantee that thousands of those who cast their lot with us will not be massacred, no guarantee Iraq will remain one nation, no guarantee there will not be chaos and civil war.

There is no guarantee that after having invested $200 to $300 billion and the lives of thousands of splendid young Americans, we will not end up with an Iraq that is a strategic ally of Iran and a Sunni Triangle that is a base camp and training camp for terrorists larger than the one we destroyed in Afghanistan.

The impending U.S. troop withdrawals are a roll of the dice, demanded by the American people and now acceded to by the Bush administration. No one can know for sure what the dice will deliver.

David wrote:
> Try it with a true balanced input.
++++++++++++++++++++++++Ihave.
I used a home made 1:1 torroid tranformer with minitmal effects.
I even tried it with a 1:1 balun at the far end, with no effect.

The only point I am trying to make is that the twisted pair and
paralled
conductor that I tried were not completly balanced. Perhaps high
quality
CAT6 ethernet cable would be.

We are moving into the realm of "how many angels can dance on the
head of pin". Interesting from a philosphical point of view, but not
much
use in the real world.

I have been trying to find better ways to reduce noise since before
I got my EE. In my experience better reception, IE receiving the really

weak signals, has more to do with reducing the QRM and QRN then
"magic" feedlines. I am not in love with coax, it is just the
easiest/best
solution to keep my feedline from picking up noise, and with common
mode supression, keeping noise from finding it's way back up the shield

and getting into the antenna.

As I have said, if I lived in the woods, with no electrical equipment
to
be sources of RF noise, then the type feedline I used would not matter.

BTDT But in the world that I live in, there are a variety of noise
sources in
my house that I have mitigated as far as possible. One step in
mitigation
was to reduce QRM ingress as much as possible. With one, or more, PCs,
AC to DC power supplies, DSP(rather noisy) and other noise sources
in my shack, coupled with the other household equipment, "smart
furnace"
fridge, wifes PC, TV/VCR/DVD, microwave, alram clock, and every light
switch,
I found that I could not get a balanced RF feed to work.

However the audio that I distribute around our home is balanced for the

reasons you listed. At work we distribute some video via balanced
tiwn-ax
up to 2 miles. We are replacing these with fiber not because balanced
doesn't
work very well, but because lighting strikes keep frying the line
drivers.

In a situaiton where one was using a balanced antenna,like a dipole,
with
no significant local noise sources parallel, twisted or orpen ladder
line
would be great. For extremely high power transmit operations open
ladder line
is the best choice. But there will more leakage from the open line then
from coax.

Terry

What did he do? Do you know him? Why is he scum?
He is famous and respected by many people from all
walks of life. Who respects you ? Noone has heard
of you. You will pass unnoticed thru life with
your averageness. You never step out of line. You
believe what the majority believes. You consult
polls to see what your ideas should be. Let me
guess..You support the war in Iraq. America..love
it or leave it..you support out military even tho
you have never served. Republican probably. Gun
owner. Divorced once. Out of work and life hasnt
really been what you hoped for.
BUT you know the Nazis were evil. Hitler was the
antiChrist..right? Because if he wasnt, if maybe
Germany had a valid reason to wanna right the
wrongs of Versailles, that would rock yer whole
foundation. But its way over your head. It
requires reading. God knows youdont have time for
that shit. Gotta watch football on TV, and write
mindless crap on usenet. Think about it. If you
still have a mind of your own.

http://www.etantonio.it/EN/Universita/5anno/SintesiSistemiIntegratiCo...

and naturally my Thesis:

http://www.etantonio.it/EN/Universita/Tesi/index.aspx

there is also a section regarding a master in communication and
satellite navigation:

http://www.etantonio.it/EN/Universita/MasterSatellitare/index.aspx

and a forum where me and some friends of mine, all engineers, will try
to answer to any question regarding electronic or
engineering, you can found it at the link:

http://www.etantonio.it/Forums/Electronic/default_forum.asp

The section dedicated to the electronics is at the moment not
completed,
in any case you can see the arguments I'll try to talk about at this
link :

http://www.etantonio.it/IT/Elettronica/index.aspx

a great attention will be applied to the wireless sensor networks.

if you found any inaccuracy or error please let me know...
Thanks for the attention

4698. Sony ICF-SW07 - ROM Update Questions

Newsgroup: rec.radio.shortwave
Date: 2005-11-28 17:26:48 UTC
From: Walt Bilofsky <bilofsky@toolworks.com>
Message-ID: <16fmo1l4t7tb94p4c6e4fmdmucbpii6l1j@4ax.com>
Source record: 51649

My Sony ICF-SW07 has proven to be a great companion for international travel. It's small and light, and the detached amplified antenna works well in hotel rooms where an attached antenna is useless.

My questions: Has anyone here ever ordered a ROM to update the pre-programmed frequencies? How long does it take? Does it take longer if a custom ROM is ordered? And what is the current ROM version - is the 2005-2006 version (JEJF) out yet?

Thanks for any help.

- Walt Bilofsky

Huh... I have had bunches of dealings with Canucks.
Well at least from Ontario. Every deal has been great.
Good equipment, good deals - oddly enough all TMC gear.
Great Hospitatlity,
Heck, they even have a cool national anthem.
I would say they are good neighbors indeed.
One word of advice : NEVER drive through Toronto during any part of the day.
It is constant grid lock.
Any night you cant get from Ajax to Niagra at blazing speeds.

I don't about Quebec though - I hear they are a little loopy there.

In the DC case the current would drop off with time
as the capacitance near the source becomes charged
and resistive effects predominate.

The electrical resistance of Beryllium vaires with the
strength of the magnetic field it's in IIRC.

Correct. There must be a return path to the generator or battery.

www.devilfinder.com Effects of fiberglass cars on fire

Corvettes are nice cars,but dont let that Corvette car catch on fire.I once saw a Corvette on fire and that fiberglass body with the fiberglass resin in it burned up very quickly and someone told me burning fiberglass/resin puts out toxic fumes.Best thing to do is get away from it or at least keep a good fire extinguisher (all vehicles/cars/trucks/boats should have at least one good fire extinguisher) in the car.One of those battery quick disconnect switch thingys might be a good idea too.I prefer vehicles that are made of good old fashioned steel.

++++++++++++++++++++++++++++++++++
Now I get it.
I am trying to recieve signals near or at the noise floor which is set
first by the local QRN. there are as amny different levels as
refference
books, so I will use John Doty's figures which are wildly optimistic in
my
experience. I will post links to my refferences so others may follow
them.

From:<http://anarc.org/naswa/badx/antennas/grounding.html>

"According to "Reference Data for Radio Engineers"
(Sams, 1975), the wintertime level of natural noise in
my area at 10 MHz should be about 32 dB above the
thermal reference level: this would produce a noise
floor of -104 dBm in this bandwidth with a perfectly
efficient antenna. "

A very handy chart that converts dBm to Volts can be found at:
<http://www.minicircuits.com/dg03-110.pdf>

Sherwood Engineering<http://www.sherweng.com/table.html> gives
the R2000 noise floor as -130dB in the SSB Mode.

So I am trying to capture signals in the range of -130dB=0.058uV to
-119dB= 0.251uV.

Your refference to audio being delivered over balanced line is at 0dBm
(nominal) for a voltage of 0.775V. (*600Ohm) or 0.225 at 50 Ohms.

There is more then a slight voltage level diffference.

Can we agree that:
Adding 1uV of noise to a 1uV(-107dBm) signal will significantly degrade
the

SN ratio.

Adding 1uV of noise to a 0dBm 50 or 600 ohm line will result in
minimal,
as in I would like to see it measured, degradation of the overall SN
ratio.

And I bet you won't try to run the output of a moving coil phono
cartridge
over ~70' of balanced audio line.

In a uV world I will stick to single ended, unbalanced,
coaxial/shielded cable
interconnects. If you are lucky enough to deal with signals in the
0.1V range
then twisted or parallel cable will work just fine.

Terry

>As are extraterrestrial spacecraft.

BS. They are simply not here. I would gladly bet $10,000 that nothing
- not one thing - that anyone has ever seen within the reach of our
explorations of space, whether earthbound or from spacecraft, has had
the mark of an intelligent lifeform originating from outside the the
earth's biosphere. There is not one reliable shred of evidence at all
that any truly extraterrestrial material object has arrived at our
doorstep, and exceedingly scant evidence that RF or light energy has
made it here either.

The geographic location of the manufacturing facility is not the issue.
The willingness of a marketing and distribution operation like
Eton/Grundig to pay for and insist on strict quality control and good
quality components is really the issue. Their track record of
haphazard delivery schedules and poor quality in prior products does
not give me much assurance with this latest round of receivers. Maybe
things have changed, but I would not gamble that much money at this
point.

The Tecsun-Degen group are capable of producing good quality radios,
but quality costs money that Eton apparently was not willing to invest
in the 800 project.

Right on Man and the Jews make the rules an old saying is about the golden rule the once who have the money do make the rules. In modern histories it the people who have the most influence make the rules. Look at the war in Iraq it is a war for Israel no wonder with the influence the Jew have in America we can look forward to more wars jet.

4737. degen de1103 vs sony icf-sw7600gr

Newsgroup: rec.radio.shortwave
Date: 2005-11-28 20:03:41 UTC
From: willfull_buck@yahoo.com
Message-ID: <1133208221.743494.161020@o13g2000cwo.googlegroups.com>
Source record: 51687

I have both the DE1103 and the 7600gr. For the past week I have compared them against my tabletop unit, a Kenwood R-1000. The antenna selection included a 50 foot outdoor random wire, a sony windup 10 footer, and the degen DE-31 active loop. Listening times varied from morning, midday and night.

Let me say first that I am pretty suprised with the de1103. For a radio costing $50, it really is a bargin. The radio feels solid and compact. Also, I love the anolog look of the LCD. I read the reviews from Passport, and they panned the de1103's layout. But of late, I've lost respect for that publication. I have NEVER found their "whats on tonite" section to have accuate freqs! And their review are somewhat bias.

Things I like about DE1103
1. small size
2. good speaker sound
3. tuning wheel
4.backlight on controls
5.sensitive
6.SSB
7.recharger batts included
8. good ear buds included

Things I dont like about DE1103
1. no volume wheel
2. SSB modes not changeable
3.SSB fine tuner is too wide and really touchy, hard to tune
4.SSB not very selective
5. batt springs mushy

Things I like about ICF-SW7600GR
1.small size
2.good speaker sound
3.very good selectivity (except for FM)
4.very good SSB reception (for portable)
5.very good MW reception (for portable)
6 ajustable attenuator (good for long wire use)

Things I dont like about ICF-SW7600GR
1. no tuning wheel
2. odd scanning functions
3. no built-in batt recharger
4. no tone control wheel
5. local time 24:00 only
6.LCD too small

I like both radios. The sony is a little better overall and a lot better on SSB. The Degen is smaller and more fun to tune-around with. The Degen wins the "bang for the buck" award. The sony does a better job of pulling in weak signals.

PS.. the degen DE-31 active loop is complete crap! The whip alone is MUCH better!

All the Best John in San Antonio Tx..

Indeed, geography as such isn't an issue. The fact that the product is being put together by a manufacturer other than Tecsun-Degen could well be.

> The willingness of a marketing and distribution operation like
> Eton/Grundig to pay for and insist on strict quality control and good
> quality components is really the issue.

Shifting operations to Bharat Electronics Ltd could well be a part of an Eton/Grundig insistence on a higher level of quality control where this model is concerned.

>Their track record of
> haphazard delivery schedules and poor quality in prior products does
> not give me much assurance with this latest round of receivers.

Thus far, their track record with quality control in this unit seems to be a break from the ineptitude with the Satellite 800. Admitedly, the delays on the release of the E1, on the other hand, were annoying and certainly gave reason for pause.

>Maybe
> things have changed, but I would not gamble that much money at this
> point.

Admittedly, the degree of risk aversion varies from consumer to consumer, so I can understand if someone in the market for a premium portable decided to wait it out a bit longer on this one. I've done so myself, despite the fact that I was quite impressed by the sample I borrowed from a friend.

> The Tecsun-Degen group are capable of producing good quality radios,
> but quality costs money that Eton apparently was not willing to invest
> in the 800 project.

Maybe the Tecsun-Degen group are capable of putting together a decent under $100 throwaway...I don't really know. Given their track record in partnership with Eton/Grundig, I'd be extremely cautious with regard to any premium set that they might put out.

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6561

As Dale Parfitt recommmended a good Ground to the mounting position
of the Active Antenna and connected to the Coax Cable's Outer End
Connector; can help reduce Noise Pick-Up along the Coax Cable .

TIP - Two Snap-On / Clamp-On Ferrite Core Choke one about 4" - 6"
down the Coax Cable from the Active Antenna and another one about
4" - 6" before the Coax Cable enters the House/Building can also help
reduce Noise Pick-Up.

hope this helps - iane ~ RHF

I'm curious, for SW reception, does it work well with a portable
(like, say an SW77 or Satellite 700), as well as with your tabletop
receivers? Size-wise and being optionally battery-powered, it looks

like an attractive option for portable applications (certainly for,
say, a Drake SW8 or something of that calibre), but I'm wondering if
it's just too much an antenna for a portable...

While most Democrats and some Republicans are calling for near instantaneous withdrawal, interestingly, Jimmy Carter stated on TV the other night that he felt that it was essential to hang in there at least until the nation was stabilized and could be dependably defended against insurgencies by those opposed to the popularly elected government. Frankly, while I seriously question our original motives to go to Iraq, I also think it would be goofy to leave it in its current state of disarray - I cannot see that it would be to anyone's good to do this.

I also think it essential for the world to see this, and to lend an appropriate hand. They can bluster all they want about it being the U.S.'s fault, but it is now everyone's problem, and many hands make light work.

I've got a $60.00 Degen DE1103 that has had no QC problems - it works every time. Indeed it is finshed well and the parts fit tightly. At half the price of a Sony it is a steal. The memory system has some limitations inherent with the design, but it works.

OTOH I have an Eton hand crank generator radio that feels downright flimsy considering it sells for $40.00 Whether it is of Chinese or Indian origin isn't as important as the wobbly grindy crank generator which feels like it could come apart at the wrong time.

A Stable Iraq would generally mean Stable and Lower
Oil/Fuel Prices World Wide.

Note - Europe is more 'dependent' on Middle-East
Oil then the USA is; and it is in Europe's Political
and Economic 'interest' to see that the USA leaves
Iraq when there is some assurance that both in the
short term and the Long Term the Government and
Nation of Iraq is Peaceful and Stable.

Both China's and India's growing economies need
Stable and Lower Oil Prices to maintain their Growth.

Russia, Venezuela, Iran and other Member Nations
of OPEC could benefit from an un-stable Iraq and
Higher World Wide Oil Prices.

Right now we should be handing this off to the UN. Where is there effort to
get this done? Could it be that after we thumbed our noses at the
organization, that member nations are thumbing it right back?

Yes, current can, and will, flow in a single bare wire until the
edge reaches the end of the wire. It's called an antenna.

Not at all. Since resistivity varies between conductors because of
the materials of which they're composed and inductance varies
because of their diameters, why would one _not_ expect c to vary?

>M II - I understand that 'you' Kill Baby Seals for Free ~ RHF
> .
> .
> . .
It has been illegal (and there is therefore no market anyway) to kill baby seals for many years now.
However organisations such as the IFFAW still use 'old footage' (Well, of animals anyway) cos Bridgette Bardot, once pictured cuddling a wild live seal pup, is much older today! For fund raising.
And the debate continues, despite millions of seals on the North East coast of North America each year. Less depleted than the once plentiful North American buffalo are now.
For fishing peoples the seal 'fishery' was once an essential part of surviving through the end of the harsh winter season. It was an intensely dangerous activity that could bring in some, often essential, income at a critical time of year, before fishing could be recommenced. It was 'prosecuted' as the expression used to be, typically out of New England, Nova Scotia Canada and from Newfoundland (now part of Canada) and Greenland etc.
With the debate/controversy, fact/fiction? about 'Global warming' it may become less common. If global warming is true, without sea ice on which seals can 'pup' (i.e. give birth their young) vast seal numbers will decrease. Kinda unkind to be drowned at birth eh?
In the last few years good quality seal pelts have risen in demand and in price. Some people who live in cold wet, icy climates prefer sealskin clothing in preference to say, less waterproof, sheepskin/leather. But sealskin is also used for very fashionable items. And for durability; one will rarely wear out a sealskin hat or boots, for example.
Beware of misleading (anti-sealing) advertising! To paraphrase Hitler; who once said "To tell a lie. Tell a big one and tell it often". The sealing season is brief and highly regulated. My late neighbour VO1HI, also a licensed marine radio operator, once took part of his vacation as radio operator on one of the traditional style sealing vessels which went to the ice 'front' to get seals pelts, seal carcass meat and 'flippers' which properly prepared are still considered a delicacy in certain areas.

K&P @ AS.Com,

Climate Change occures just about everyday somewhere.

The Idea {Hyperbole} of Global Warming and Climate Change
is "SCIENTISM" and not a proven 'Scientific Fact' to date [.]

"The `Hockey Stick': A New Low in Climate Science"
- by John L. Daly
GoTo=> http://www.vision.net.au/~daly/hockey/hockey.htm

NOTE: Have placed this on my RMR
= Rapid Message Recall (RMR) List.

I now have the : "What About the 'Medieval Warm Period'
and the 'Little Ice Age'"; as counter points to the Wild
Claims of 'Evironmental Wackos' about Global Warming.

Plus being able to ask any 'Evironmental Wacko'
who is making Absurd Claims about Global Warming:.
? "Have You been out in the Sun Too Long ?
? Do You have Sun Spots Imprinted on your Brain ?
? Do You Know anything about the 'Maunder Minimum'
and diappearence of Sun Spots for 70 Years ?
? Well Do You ? - do you, Do You. DO YOU !

But the Great Fun will be being able to Scream
at them and Repeating these Two Words:
"hockey sticks, Hockey Sticks. HOCKEY STICKS !"
All the while Waving-My-Arms about in the Air
and Bulging-My-Eyes-Out :o)

just for the fun of it ~ RHF

My situation exactly. While I'm at 2500' ASL and my local stations
are at 8800' and 4500', there are higher peaks between them and me. So
signal levels are down and reflections off local peaks (that are
line-of-sight to me and the transmitters) are as strong as those via
the obstructed path.

This is a technological disaster, which of course is what you get when
you put politicians in charge of science projects.

DTV, BPL, the morning after pill, all screwed up by politicians with
agendas.

I saw copious amounts of evidence today of light energy reaching earth
from an extraterrestrial source. In fact, I could hardly read my monitor
because of it.

I suppose you sit ten miles up and throw big rocks at the ground to
simulate meteors, since you're sure they're not extraterrestrial.

You liberal clowns seem to believe that repeating this outright lie
will make it true, or that honest people will allow you to repeat it
with impunity until the naive and weak of mind accept it.

You have been consistently and repeatedly unable to show a single lie
told by Bush about WMD. That you would continue to say he lied about
WMD makes you the worst kind of liar.

That is reasonable enough to erase his entire family tree for a few hundred bucks.

That would be fairly effective assurance that the problem won't grow any larger from his gene pool.

I got an entry in my log several years old stating "Columbian resistance/
Vos de la Resistance. The reason I looked it up was because i can hear some
jamming and that typically went with those transmissions. Are you familiar
with these comms Steve? And can you copy that jamming? And if so do they (
Columbian Resistance groups) still operate in that spectrum?

I meed a good excuse to quit watchin' the "BOOB TUBE"
maybee this is it...

I us'd to repair TVee... Most people were satisfied with
a picture that looked like a pair of those 3D glasses when
the show wasn't in 3D...

If you done anything to make it better they complained it
jus' doesn't look rit'...

They're Democrats at heart, they just ran as Republicans because their
districts are too smart to elect anything marked Democrat. Just go up
to one and confide you're a liberal and he'll tell you so.

Back when I was 19 and working in a small TV repair shop in Oregon, a customer brought in a set that needed a new CRT. The thing was so dark that it could barely be seen in a darkened room. We changed it out, took hours to get the convergence just right, but the set looked as good as new. The customer came to pick up the set, and took it home. Next day he called and made the boss come out to his house.. he was fuming mad. Boss got there and looked to see what the customer was complaining about.. there were a couple bad ghosts in the picture that the customer simply couldn't see with the set the way it was, and swore up and down that they were OUR FAULT!

Who do you think taught the jihadists how to fight in the first place?

Why do the techniques in the Al Qaeda training tapes look so familiar?

We created Bin Ladin. Now we are creating a million more Bin Ladins.

Bush is dirty. Nothing good springs forth from him. He needs to go
back to the ranch.

David wrote:

> You can't send a MC phono signal 70' on co-ax either.
++++++++++++++++++++
Yes you can.

93 Ohm, low capacitance coax, works best but standard 75 Ohm coax will
work.

I just checked.

I compared a good quality balanced microphone line to coax.

Balanced Mic line = hum with no discernable signal.
75 Ohm coax = muffled, but clean signal
93 ohm coax = fairly good, as in moderate higher AF, clean signal

I did have to use a batterey operated phono amp.

LOL, you're correct.... it really doesn't matter.
Had a rockhead try to take me for $3500 outta NY a while back... deal over the internet, cert. bank check,
and it went from local cops to county to state to Atty. General to United States Postal Inspectors....
last thing I remember being told by the trusty Package-Police... "You must realize we have million-dollar frauds on our desk, but we will
look into it as soon as possible." and as far as I know, it's still on his desk.... I gave up on the system [will never use it again]
and just hounded/tracked/harrassed/called/fax-bombed/email-bombed the living crap outta him, his neighbors and everyone he knew for
nearly a year straight, and finally someone had enough and gave up one of their wives and where they worked.....and I called there.
WOW.... I had my money coming back to me
in timely payments over about 4 months and even got a couple hundred for the "trouble".
[it all came in money orders from different people and places, but who's complaining...]
Something about losing his Correctional Officer job and her job with Ingersoll-Rand just lit a fire under it.
Maybe one day I'll even let the package-police know what happened.
Almost 2 years lost, screwing around with morons. Puerto-Rican mafia morons no less. [no offense to PR in general]

The system only works for the few, and only in a 'right place/right time' manner.
Wish him luck!

Right! good one, RHF! ;-)

junius

But seriously, Degen and Tecsun are two different companies, aren't they? Degen being the ones who make increasingly decent, if basic, compact portables at fairly low prices? While Tecsun are the folks who partner with Eton to produce some of the overpriced, uninspiring stuff we find in Radio Shack (e.g. E10 & E100 & the windup toy radio)?

>*What appears to have been forgotton here is only Full licenced Hams can
>read these messages compaired to everyone who can read a text.

In point to point communications, it doesn't matter. But in the real
world of emergency comms, voice is the usual mode, not CW.
IE: the fone hurricane nets, health and welfare nets, etc... Few
are CW. But anyone can copy them if they were. Well... If you know
code that is... I knew code well before I was a licensed ham.

>*But when the powers out so are the repeaters and also the mobile phones. CB
>radio is more practicable in situations like this as anyone can use them not
>just Amateurs.

Yea, but is there anyone on the CB bands I would want to talk to
to pass the traffic, etc? I kinda doubt it. CB might be ok for very
local
neighborhood type stuff. Lets them keep in contact. But as far as
actual
traffic, or health and welfare, CB would be nearly useless to me.
Not knocking CB, just telling it like it is. I would be on HF, and VHF
simplex. Also...The likelyhood of *all* the repeaters staying down for
long is probably fairly slim, unless the actual antenna towers are
down.
They can always bring a generator...You can also set up portable
repeaters. IE: ad nausium... I'll be talking everywhere. Local and
regional. CB wont. They will mostly be stuck in the hoods.

>How are they doing this? in what way? Who are they talking to?

Do they keep you locked in a closet? We do it in whatever way it
takes to get the job done. We are like Marines. We adapt, overcome.
Who do we talk to? Nearly anyone who is involved. From the
national weather service, to the coast guard, to local government
officials, to hospitals, etc, etc.
You talk about the CBer's. Where were the CB'ers in NO when the
people were stuck in attics with cell phones? The cell phones
were working for many people. They would call for help on their
phones, but there was no way to relay this to local police, etc...
Where were the CBers? They didn't seem to be capable of relaying
the calls. How were these calls being relayed to local NO officials?
I'll tell ya...The people that the cell phone users would call, would
eventually be routed to ham radios ops doing health and welfare
traffic to/from the area. Most of this was on HF. 40 meters in the

day, 75 meters at night. The 7.290 traffic net handled quite a bit.
Anyway, the traffic net people would get calls from relatives relaying
the cell phone calls from the attic stuck people. You would have
people in Houston, Dallas, Little Rock, etc, etc, etc, etc relaying
these messages *back* to NO to be relayed to the police, fire, etc.
I heard *many* of these attic stuck relays on HF. So sorry, but
your CB would be useful to the local is not really flushing. The
CBers either were flooded themselves, or fell down on the job.
The hams using *HF* were the only ones reliably relaying these
messages. And they were often 100's on miles away from NO.
I'm in Houston. So we also had our scare this year too. Believe me,
I'm prepared to handle just about anything, and have been, well before
any hurricanes hit the area. I have battery power here at home, and
don't need no stinkin power. Ditto for mobile, portable. I'm fully
self contained, power, radios, antennas. I can run off battery power
indefinately. I recharge off the trucks. I have portable towers, masts,

etc, etc, so I can set up at any remote location with 1st class
antennas. We practice this at field day every June...
I can set up antennas portable, better than some peoples home
antennas. IE: large yagi's, etc. I could act as the portable tower
for a temporary repeater. Anywhere they want to put it. I drag
it all on a motorcycle trailer.

>*I will be ready on my good old trusty CB to broadcast to the masses. More
>accessible and cheaply available than Ham but im sure the both can work in
>tandem.

There is a place for CB, no doubt. But I see CB as being good for
the local neighborhood talk line where poeple can keep track of the
people around them. It's pretty good for that. But handling actual
emergency traffic? In most cases CB would be fairly useless.
For many reasons. IE: the frequency is wrong for that use.
IE: only 5 watts legally... IE: the wrong people are on it, if
you are relaying traffic. Trust me. I have all of the currently
used devices. Cell phones, CB's, ham radios, shouting with my
lungs, etc. if I knew a hurricane was heading this way, I'd keep
my ham radios over all of them any day of the week. Way more
useful, with the wide spectrum coverage, antennas, radios, etc
I have. Here in Houston, ya wanna relay emergency traffic,
get on ham radio. Ya wanna talk to a truck driver looking for
grocers supply, get on a CB.. And I'm not bad mouthing CB.
Just stating the bleeding obvious. To me, CB is nearly useless.
In contrast, I can do nearly anything with the ham radios.
Including digi modes, fax, SSTV, etc...I can send documents,
weather charts, etc, over ham radio. And I can do it all with *one*
radio. My IC-706mk2g. Covers all bands, all modes. gen cov
receive. Heck, it'll even do CB if you clip a dyode.... My is still
locked though..Can you do all that with your CB? I doubt it
unless it's ham rig... :(
Good luck in the next emergency... I bet more will line up

behind me, than you, if they need to pass welfare traffic about
people stuck in flooded attics. We proved ourselves at that
job. We got *many* of them plucked out over those few days
after the storm. I heard many of them myself live, in living color.
Many on 7.290 and the linked health and welfare nets.
MK

There are bad guys everywhere -- Canada is no exception.

The way to handle this case is to send the person a registered letter and
indicate that if he does not respond, you will report him
to the Fraud Division of the Ontario Provincial Police (OPP). That should
wake him up a bit!

Have a look at: http://www.crimes-of-persuasion.com/Victims/reporting.htm

Wow dx - that's the stupidest post you've ever made. Announcing a
Canaduh QSL like some dorky little kid that found a nickel. Man
you're a moron.

I haven't had a problem with Canada. However, I dedicated a webpage to
this jerk
http://www.lazygranch.com/cozzi.htm
I put the URL in his feedback and he managed to get the feedback
removed. I hadn't realized it violated ebay policy.

I had another asshole who sold me a camera that needed repair and
decided he could stand the negative feedback. However, he might have
not known the item was defective. This Cozzi character sold me shit.

Tracy Fort's drunkenness, necrophilia and a deceased seventy two year old cancer victim, who happened to be my mother:

==========
==========
I'm not drunk. I haven't finished my first 12 pak yet.
I'll get there and when I do it's back to the cemetary.

She gives great cancerous BJ's.....thanks Canucky boy!

haha...thanks.....gotta go grab another beer.

You and your dead ass mom might be interested in the last post I made.

How far north did the Katrina effect? I saw someone's mom floatin down the mighty Mississippi!

Dug her ass right up! She was too damn ugly to have sex with before she died. The old bag o bones fell apart in my hands! She didn't complain about much either other than the lousy sex she got from those foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

I have your mom's legbone right here. I kept it as a momento ya know.

rattllin' bones!

squeek...squeek...

Skeleton rides 50 cents a pop! If you can stand the smell....I wonder is she stunk that bad in life?

hahahaha....I'm still laughin' at your sorry ass family! This is funny stuff!

She is very fresh but not that fresh!

hehe...I love dem bony women....rotten to the core.....

um...umm....good!

I love it....did she do it for you too?

Please accept my apology for abusing her. I'm sorry that I did not toss her back into the black depths that she came from. Next time,I will be sure to take care of that. I promise that I will refill the hole with the dirt that came out too. In addition, I will re sod the plot at no additional charge. Let me also apologize for the milky

substance in her left eye socket, that was an unavoidable accident.
please feel free to include this post in your sig file!

You might as weel keep it up there...I love the ole boney bitch!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and
she began to come alive!
I played dem bones like they never been played and she smiled for me all
the day.

Pork and bones....

DON'T HURT CANADA! I'll miss those nights with the ole bony lady!

The most fun I ever had!

Sporting a new moniker (GraveDigger) just for you and mommy...

He knows the inside of his mom's boney butt! hahahaha

hahahahaha......Can't you come up with your own material?

hahahaha.....when you got thru lickin I was stickin.....

Haha...I laugh eveytime I read my great material! Keep postin
Canadork

How's Mommy?

hmmm, I just called to confirm that deal & POS#. Indeed, the info you found on the Yahoo group is quite correct. If you call their 800 number, you need only give the POS # to be entitled to receive the discount.

the online deal which I had seen on their website is a different promotion altogether. so, don't be confused by my previous post in this thread. The info George has provided is quite correct.

Nice.

Thanks, George...

Junius

Tracy Fort's drunkenness, necrophilia and a deceased seventy two year old cancer victim, who happened to be my mother:

==========
==========
I'm not drunk. I haven't finished my first 12 pak yet.
I'll get there and when I do it's back to the cemetary.

She gives great cancerous BJ's.....thanks Canucky boy!

haha...thanks.....gotta go grab another beer.

You and your dead ass mom might be interested in the last post I made.

How far north did the Katrina effect? I saw someone's mom floatin down the mighty Mississippi!

Dug her ass right up! She was too damn ugly to have sex with before she died. The old bag o bones fell apart in my hands! She didn't complain about much either other than the lousy sex she got from those foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

I have your mom's legbone right here. I kept it as a momento ya know.

rattllin' bones!

squeek...squeek...

Skeleton rides 50 cents a pop! If you can stand the smell....I wonder is she stunk that bad in life?

hahahaha....I'm still laughin' at your sorry ass family! This is funny stuff!

She is very fresh but not that fresh!

hehe...I love dem bony women....rotten to the core.....

um...umm....good!

I love it....did she do it for you too?

Please accept my apology for abusing her. I'm sorry that I did not toss her back into the black depths that she came from. Next time,I will be sure to take care of that. I promise that I will refill the hole with the dirt that came out too. In addition, I will re sod the plot at no additional charge. Let me also apologize for the milky

substance in her left eye socket, that was an unavoidable accident.
please feel free to include this post in your sig file!

You might as weel keep it up there...I love the ole boney bitch!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and
she began to come alive!
I played dem bones like they never been played and she smiled for me all
the day.

Pork and bones....

DON'T HURT CANADA! I'll miss those nights with the ole bony lady!

The most fun I ever had!

Sporting a new moniker (GraveDigger) just for you and mommy...

He knows the inside of his mom's boney butt! hahahaha

hahahahaha......Can't you come up with your own material?

hahahaha.....when you got thru lickin I was stickin.....

Haha...I laugh eveytime I read my great material! Keep postin
Canadork

How's Mommy?

hahahahaha....keep postin that sig girlieman!

==========
==========

This .sig file will continue until Mister Fort posts a sincere apology
to all cancer victims and their families. His refusal to do so says
more about his attitude and upbringing than any of his thoughtless and
hurtful postings in rec.radio.shortwave. He seems to be very proud of
the fact that he can buy expensive radios using the refunded deposit
money from his empty beer containers and has frequently posted the fact.

It appears he is well on his way to purchasing his next radio. Anyone
caring about his well-being should mention the good work of
Alcoholics Anonymous to him. They may be able to help him restore his

self respect and dignity so he stops posting this drunken garbage on the internet.

I wonder if his wife and children know what their Hero does at night.

Ignoring the potential radiological effects, the chemical toxicity is
well-documented. You can't ignore the data on the matter.

Check out : http://www.royalsoc.ac.uk/document.asp?id=1431

Read through the annexes and take a look at the data.

I guess you missed it the first time around. Try to pay attention.

As usual, ham radio operators help sustain wide-ranging relief efforts
By Andrea Kelly
ARIZONA DAILY STAR

When all else fails, it's ham radio to the rescue. Across Arizona, ham radio operators are helping sustain Hurricane Katrina relief efforts by helping storm-torn communities communicate with rescue workers and family across the country.

This is not a first. Ham radio operators come out of the woodwork during disasters around the world, even transmitting in Morse code if language barriers pop up, said Mike Swiader, president of the amateur Superstition Radio Club in Mesa.

Ham radio operators have contributed to emergency communication efforts since World War II, Swiader said, and were crucial in post-9/11 emergency communications, as well as during the Asian tsunami last holiday season.

Ham radios work when other communication systems are down because they're powered by solar energy, batteries or generators rather than the usual power sources.

The messages are passed from radio to radio until they get to the one they are directed to, so radios don't need to be near each other to receive signals, like regular AM/FM radio signals.

"We've been involved in passing traffic to and from the Louisiana and Mississippi area," said Tom Fagan, a leader of the Arizona ham radio operators organization. "Whatever needs to come in and go out, we're doing."

When Arizona's ham operators - there are about 16,000 of them - get messages from the hurricane area, they send them along to agencies like the American Red Cross and the Salvation Army in the Southeastern region of the country.

"We're the link," Fagan said.

Because communications within a disaster area are often jumbled, Swiader said, it's frequently easier for someone there to contact an operator in someplace like Arizona, who can then relay the message back to a recipient in the disaster area.

"Sometimes it's easier to be heard that way," he said.

More than 30 ham radio operators from Arizona have already headed toward the disaster area, hoping to assist relief efforts and give emergency workers a way to communicate with each other, as well as assisting searches for missing persons.

"They're moving in when they're allowed by American Red Cross and Salvation Army," said Ned Stearns, a Phoenix ham operator and vice director of the American Radio Relay League, the national organization for ham operators.

In fact, the ham operators plan to compile a list of people they can determine as missing, deceased, alive or unknown, based on information transmitted over the ham signals.

To find out about people in the area, visit www.satern.org and fill out the health and welfare information request for the person you are trying to find. This information will be sent through the Salvation Army emergency radio network.

Ham radio operators are helping from afar
Sunday, September 11, 2005
By DONNA FORK
For the Times dfork@knology.net

But sometimes, even the airwaves can be shut down

They also serve who listen and wait.

Huntsville amateur radio operator Douglas Hilton and other "hams" in North Alabama are helping victims of Hurricane Katrina by relaying messages between families, officials and each other.

Lately, Hilton's been spending most of his spare time in his "ham shack" listening to calls for assistance. The systems analyst for Intergraph Corp. is one of thousands of amateur radio operators who help people during emergencies.

Hilton is unusual in the ham radio world because he wears three hats: He is an amateur operator; a member of the Alabama State Defense Force, heading the Communications Platoon for North Alabama; and he's also a military communicator authorized to use the Military Affiliate Radio System.

His connection to the military (although he is a civilian) gives him access to additional radio frequencies most amateurs can't access. He has been a ham radio operator for 42 years; his father had him build a crystal radio when he was 7 years old, and he got his ham license as a teenager. But he wasn't all that active until after the terrorist attacks of Sept. 11, 2001.

"That hit me right between the eyes," he recalled, and he began to get back into "hamming."

Now Hilton averages about 100 hours a month on the airwaves and takes countless courses and certifications. He noted that amateur radio operators are "amateurs only in that we're not paid." In return for service "the government gives us frequencies."

Hilton said the North Alabama ham community is large.

"The astronauts are all ham radio operators," he said, noting that astronaut Owen Garriott "was the first ham in space."

Hilton''s "ham shack" is not really a shack at all. It is located in a formal dining room - complete with crystal chandelier. It includes six radios and two computers.

"You don't need six, but don't tell my wife, please," Hilton said as his wife, Diane, laughed. She recently obtained her "technician class" license, which is the entry-level license for ham radio operators. The next is "general class." The highest, which Hilton has, is "amateur extra." Anyone can be an amateur radio operator, Hilton said. There is no age limit: Hilton knows a local ham who is 18 and another who is 89.

It doesn't cost much to be an operator either, he said. A beginner could purchase enough equipment to get started for about $300. Courses are free through one of the local ham radio clubs, of which there are several, including the Huntsville Amateur Radio Club (the Web address is www.harc.net).

In addition to six radios, Hilton has two computers: a laptop and a desktop. "The radios are hooked into the computer." With his setup, the Hiltons can talk to other hams as far away as Japan.

But for the past two weeks there hasn't been time to chat about matters such as which antennas they like the best. There are emergency frequencies to monitor. At the moment, a critical one is the Salvation Army's emergency frequency, Hilton said.

Hilton never knows if it will be a busy night or a quiet one. Recent solar flares have added to the uncertainty because they disrupt communications. Friday, during the late afternoon and early evening, it was unusually quiet.

"I'm a little surprised," he said Friday. "I can't believe how dead these bands are."

Solar flare

It could be a solar flare, or could be something else. "That's the problem, you never know," he said. The waiting, the listening, "it wears you out." But it's worth it when you hear a voice and "you might be the only person who can hear this guy."

On Thursday night, when Hilton was expecting problems, reception was fine. He was able to contact two operators in Louisiana. He also heard one Mississippi ham talking to another ham "so at least one is working there."

ecause of the Hurricane Katrina disaster, there are thousands of messages piling up, waiting to be delivered by ham radio operators: What will happen when all their radios start working again?

People like Hilton will be extremely busy. There are thousands of ham radio operators in Louisiana and Mississippi. When they all get back to the airwaves, it will be quite a challenge to sort out all the messages.

But meanwhile, as they waited for the deluge of messages, on Thursday night the Huntsvillians received a call for help from New Mexico.

Maura Campbell Kingston of Clovis, N.M., was trying to reach her aunt, 76-year-old Sister Joan Campbell, a nun, of Harvey, La. Kingston called the Salvation Army, which contacted a ham radio operator, who called Hilton.

Hilton tried Thursday to reach a radio operator in Louisiana to check on Campbell, but almost all of them were off the air. Finally on Friday night Hilton got through to "KG5YK," who is Robert A. Turner of Elm Grove, La.

When Turner's message came through, hams from all over the United States could be heard, eager to talk with him.

Helping 'ham brother'

The outpouring of sympathy could not be contained: Radio operators from Texas, Indiana and elsewhere all expressed their support for their "ham brother" in Louisiana.

"I hope this never happens again," said Turner of the Katrina disaster. "It's been a tough time. ... I'm looking for the right words." He thanked the other hams for their all their help.

"You'd do the same for us," the ham from Texas said. Others echoed his sentiments.

Turner gave Hilton information about when to call with his "health and welfare message" about Kingston's aunt. Hilton vowed to keep trying to deliver the message "for as long as it takes."

But that proved to be unnecessary.

Friday night, after calling her aunt repeatedly, Kingston finally reached her by phone. She was still at her home in Harvey.

"She was OK," Kingston said in a telephone interview Saturday. "Harvey stayed dry." But the area was without power and Campbell "was sitting in the dark with her flashlight."

Later, Kingston called Hilton to thank him. She said he told her: "I'm just doing it because I want to help."

Kingston was impressed.

"I believe that thing about Southern hospitality."

Ham radio proves to be more than a hobby
By Jeannetta Edwards

Daily Times Leader

When Hurricane Katrina hit, telephone and cell phone communication hit an impasse because of downed lines and towers. But, amateur radio operators did not miss a beat or a transmission.

"Before and after the hurricane, this has proven to be the most reliable form of communication," said Randall O'Brien, a retired highway patrolman who has been involved with ham radio operation for 35 years.

"People thought when they got cell phones, they didn't need us anymore," said O'Brien, an advanced licensed operator, who often talks to missionaries in South and Central America.

According to Denver Baker, Clay County has more than 30 amateur radio operators, but only a small fraction are active.

"It's a wonderful hobby," said Baker, whose wife recently received her technician license.

The multi-faceted operation includes digital and satellite communication and is enjoyed by all age levels.

"This is a good hobby for seniors or for young people," said Baker.

By becoming a ham radio operator, which requires taking a test to obtain a license, people can communicate with others anywhere in the world.

"The classes for the test are free," said Baker, "and we help you with everything you need to know."

According to Baker, who has been enjoying this hobby for the last 10 years, the only investment required is the fee for the test and the purchase of equipment. A handheld transmitter cost around $100.

The self-policing group ensures that everyone adheres to the rules and regulations.

"We're called amateur radio operators, but there's nothing amateur about it," said O'Brien, who first became interested in electronic at age 13.

The group, which also belongs to the American Radio Relay League, meets monthly in West Point.

"We have a good bunch of hams in this area," said Baker. "We bring food at our meetings and have a good time."

"It's nice, especially for seniors," said Baker.

For information on getting involved in ham radio operation, call O'Brien at 494-2898 or Baker at 494-9096.

Ham Radio Operators Offer Help

By Beth Hahn
Mountain View Telegraph
Since Hurricane Katrina hit New Orleans last week, several ears in the East Mountains and Estancia Valley have been tuned to amateur short-wave radios.
McIntosh resident Ed Brooks said local Ham radio operators are willing to relay messages from the Gulf Coast if needed.
"We guys here in the Estancia Valley are just listening," he said. "We haven't had any need for what we can offer."
Although they may not be needed yet, Brooks said local Ham radio operators are still listening in to conversations taking place in Louisiana, Mississippi and Alabama.
During the interview with Brooks, his Ham radio was tuned to a conversation involving a Coast Guard helicopter that was rescuing a family from a rooftop in New Orleans with direction from another Ham radio operator.
Brooks said similar situations have been broadcast hundreds of times during the past week.
"It's been really spotty, but what we've been (hearing) is that it was good fortune that somebody down there had Ham equipment," he said.
Daryl Clutter, an Edgewood Ham operator and member of the Salvation Army's shortwave network, said he relayed a message from Ontario to U.S. Coast Guard officials in Washington, D.C., that originated in Louisiana.
"It was just the word 'help' spelled out two times," he said.
Like Brooks, Clutter said he has stayed close to his Ham radio since Aug. 29.
"There's been so much going on," he said. "Every day, something happens."
Clutter, a former truck driver who often delivered frozen food to

the Gulf Coast, said radio traffic has slowed since the hurricane devastated the region.
"You just wonder who all you know, that used to be your customers down there, that are still alive or had the good sense to get out," he said.
As amateur radio operators, Clutter said, Ham enthusiasts practice for disasters "every day."
"There's only so many cell phone frequencies," he explained. "If the phone system goes down, there's no way ... (one company) could handle all the 60,000 or 70,000 phone calls."
Mountainair resident and Ham operator Bob Scupp said the Salvation Army network alone has handled more than 128,000 messages since Aug. 29.
Brooks said Ham operators have been relaying messages from residents to volunteers or emergency personnel. Since a large number of National Guard and military personnel have arrived in the area, Brooks said the messages have changed from pleas for help to questions about well-being.
Shelters for evacuees are beginning to utilize Ham radios to communicate with other shelters to help families find missing relatives, Brooks said.
Rescues are still going on.
"There's been instances where they're still finding people, trapped in houses, trapped in buildings or running out of oxygen," said Clutter. "It's just terrible what's going on down there."
Clutter and Brooks said they will not offer assistance unless someone requests contact in the Albuquerque area.
"We don't want to tie up the frequencies," Brooks said.
Clutter and Brooks said they will continue to listen to their Ham radios for messages or relay requests until communications are restored in the Gulf Coast.
"We live and breathe this," Clutter said.

Amateur radio operators provide vital communications support
By Teresa Atkerson
MCALESTER NEWS-CAPITAL (MCALESTER, Okla.)
MCALESTER, Okla. -

With more than 10,000 requests for help in finding loved ones, the amateur radio operators in Louisiana are extremely busy.

In fact, they are so busy, they have asked people to wait with their requests unless there is an extreme emergency.

Ralph Suter, with the Pittsburg County Amateur Radio Club, said they had about a half dozen requests for assistance in locating loved ones in the area devastated by Hurricane Katrina. &#65533;The Red Cross funneled the requests for health and welfare,&#65533; he explained. Now, the national traffic system is backed up with the requests, he said, because there were so many.

There are extreme problems with communications in New Orleans at the present time. Suter explained VHF radio has to have line of sight while amateur radio operators can use lower frequencies that can bounce off or curve to get the message through. ?A benefit of amateur radio is you can throw a piece of wire in a tree or up a flagpole. With 12 volts of power, you can operate on a local or even worldwide basis,? he explained.

As an example, Suter said recently an amateur radio operator in Louisiana had some kind of problem that he couldn?t get help with after the hurricane. He put out the message, it went through Washington state to Texas and then into Louisiana where the right people were found to help him.

Amateur radio operators can also communicate via Morse Code, upload through television or computer or radio to satellite, Suter said. That gives them even more advantages in communication.

Jim Russell, president of the PCARC, said amateur radio has been around as long as there has been radio. Even in World War I, amateur radio operators helped with messages in Morse Code, which is something operators today still must learn as part of their licensing process.

?We look at it as a hobby,? Suter said. ?It?s a resource of individuals because they have an interest to develop the skills to operate radios in various modes.

?It?s a resource for trained communicators.?

There are forms that must be used when transmitting messages. ?When it goes into the system at one point and comes out at the destination, it is exactly the same information, even with the misspelled words,? Suter said. ?It?s our responsibility when handling traffic that it comes out exactly as it comes in.?

Suter said many of the operators use their radios on a daily basis while others check weekly. When it comes to disasters, there is the Amateur Radio Emergency Service. ?It?s not really an organization but it is organized on a national basis for community programs.

John Wright, another PCARC member, checks with the Oklahoma Sooner Net and with the Salvation Army?s network, SATERN.

After the Oklahoma City bombing in 1995 and 9/11, Russell said amateur radio was used extensively. It is also used during and after tornadoes and other natural disasters. Now, the group can work with the Automatic Position Reporting System to help more accurately report severe weather.

The group has an annual field day, which is a combination of a exercise and a contest. ?We go out and set up radios under adverse conditions to simulate disaster response,? Suter said. ?In the past, we?ve started with solar power, using a battery in a car or even a portable generator.

?The last time I kept count, we were able to make contacts in 47 states, the Philippines, some in South America and Puerto Rico in a 24-hour period.?

Suter pointed out that the word "amateur" is not what people interpret it as. "People interpret it to be an unprofessional group. But while it's made up of a lot of people for a hobby, it's not unorganized or unprofessional when dealing with disaster. We have capabilities that public agencies just don't have," he said.

Members also have to be licensed. The license testing can be done in McAlester now so those wishing to be licensed don't have to go to Dallas or Oklahoma City as in the past.

Teresa Atkerson writes for the McAlester (Okla.) News-Capital.

Old Technology Still Needed
(Page 1 of 2)

Sept. 8, 2005

Overwhelming Charity

Joe Carcia, station manager of the American Radio Relay League in Newington, Conn. helps with the disaster relief effort for Hurricane Katrina's victims along the Gulf Coast. (AP)

If anything, Katrina has taught us the value of redundancy. The best way to make sure that messages get through is to have standby systems that can take over when others fail.

(CBS) There is a store in London dedicated to "appropriate technology." It mostly carries products designed to be used in developing countries where there is a weak communications infrastructure.

Sadly, that's now the case for a large swath of the United States where Hurricane Katrina and its flood waters have wiped out cell phone towers, telephone switching stations, Internet routers and other ground-based communications systems. Even wireless Internet depends on nearby transmitters and receivers on the ground.

But amateur radio is working and, according to Allen Pitts of the Amateur Radio Relay League (ARRL), "ham" radio operators from throughout the country are answering the call to provide vital communications links. Satellite phones, a much newer technology, are also coming to the rescue.

Pitts acknowledges that cell phones and other technologies "work wonderfully when everything is going right," but "they are very vulnerable when everything is going wrong."

Just as with past hurricanes, earthquakes and on September 11th, the ground-based infrastructure, in many cases failed because vital parts of the system were damaged or overwhelmed during the emergency.

In other words, when you need them most, those cell phones are of no value.

Amateur radio, says Pitts, is not vulnerable to these problems "because each of the radio operators is a complete transmit and reception center

unto themselves able to continue going and continue with nothing more than an electrical source, such as a battery or a generator, a radio and piece of wire for an antenna."

Listen to audio of Larry Magid's interview with ARRL's Allen Pitts.

While base-station radios are larger and require an electrical power source, there are also portable ham radios slightly larger than a pack of cigarettes with a range of about 20 miles, according to Pitts. Pitts says that the next sized radio, about the size of a paperback book, can communicate up to about 50 miles without a repeater while larger systems, "about the size of a desktop computer" can communicate globally.

Amateur radio operators are in demand. When I checked the ARRL's Web site there was a call from the Salvation Army for "10, two-operator Amateur Radio teams for deployment in the U.S. Gulf Coast. Operators must hold at least a General class license. Teams should be fully self sufficient in terms of food, water and lodging and plan to remain in the disaster area for from one to two weeks."

Pitts said there was a "lady in Connecticut," who was listening on her amateur radio and happened to hear that there was a woman "who was trapped for four days without food and water." She was able to relay that message, by ham radio, into an operations center that dispatched the fire department. A day later she got a call from the trapped woman's mother, thanking her for her role in the rescue.

Ironically, this comes at a time when amateur radio is struggling for respect and, to some extent, survival. What was once a popular hobby has fallen into somewhat hard times for a variety of reasons, including the fact that the Internet, cheap long distance calling, cell phones and other technologies make the ability to use these two-way radios not quite as compelling as it once was.

Also, there is a bit of a rift between some members of the amateur radio community and some parts of the Internet industry over the use of power lines to transmit Internet signals. This technology, which could put power companies into competition with cable and phone companies for broadband service, has been criticized by some ham operators because of possible interference problems.

Despite the fact that their origins go back to the early 20th century, hams are hardly low-tech. There are now bridges between ham operators and other technologies including the Internet, cellular phone systems and Internet phones. In fact, long before the Internet became popular, ham operators were using their radio gear to transmit data along with voice and morse code.

Also coming to the rescue are satellite phones. These phones - which are much more expensive to buy and use than cell phones - rely on satellites rather than ground equipment to communicate with the phone network.

Because satellites are in space, they're not vulnerable to conditions here on earth. Also, as long as you have a view of the sky, you're able to communicate. Iridium, which operates "66 low-earth orbiting (LEO), cross-linked satellites and 11 in-orbit spares," says it provides "complete coverage of the earth (including oceans, airways and Polar Regions)."

I carried an Iridium phone with me when I traveled to Peru a few years ago. It worked great when I was in the clear such as on a boat in the middle of the Amazon River but, because it requires a line of site view of the sky, it had problems in dense jungle and in cities with tall buildings.

Iridium spokesperson Liz DeCastro estimates that there are currently about 10,000 of Iridium's phones being used in the region with orders for about 6,000 more. The company sells through resellers so it doesn't have exact numbers. DeCastro says that "traffic in the region increased by 3,000 percent" since the storm hit and that the number of subscribers increased by 500 percent.

Satellite phones are a lot cheaper to use then when I went to Peru, but they still cost between $1 and $1.25 per minute to use, according to DeCastro. That's a lot more than domestic cell use, though often cheaper than using U.S. phones when roaming overseas. The phones themselves cost between $1,000 and $1,500 she says.

In addition to handling voice calls, satellite phones can also be used for messaging or data, albeit at modem rather than broadband speed.

If anything, Katrina has taught us the value of redundancy. The best way to make sure that messages get through is to have standby systems that can take over when others fail.

That's why some news organizations keep manual typewriters around. You never know when that old technology may suddenly become the "appropriate technology."

NYNewsday.com
Amateur radio operators head to Gulf Coast

September 6, 2005, 1:00 AM EDT

NEWINGTON, Conn. -- Oscar Fuller only became an amateur radio operator about a year ago, but he knows how valuable his equipment can be in an emergency.

So even though he has never responded to a crisis, the American Relay Radio League member is planning to head to the hurricane-ravaged Gulf Coast and see if he can help establish an emergency communication network.

"This is a tragic set of circumstances," said Fuller, who recently retired from IBM. "If I can lend a hand, I want to."

Fuller and about 14 other members of the Newington-based amateur radio operator network have signed up to join the relief efforts for Hurricane Katrina. The amateur operators _ known as hams _ can often use their equipment to communicate in difficult circumstances.

Because the radio equipment operates on many frequencies, is self-contained and portable, it can often work when other communication networks, such as telephones, aren't working. It can never be blocked, which is why operators say it is good in disasters.

"When all else fails, ham radios work," said Betsy Doane of Shelton, who oversees the 2,500 members of the league in Connecticut.

David Patton, an official with the radio group, said as many as 750 volunteers may be needed. The Connecticut volunteers are going to help provide communication support for more than 200 American Red Cross Shelters in Mississippi, Alabama and the Florida panhandle.

"There are limited resources to an overwhelming disaster," said Allen Pitts, public relations manager for the radio league. "So there is not a ham on every corner. The hams are put where they are needed most of all, in emergency traffic or for saving lives."

Dennis Motschenbacher of Colchester was among the first volunteers to say he would go. He spent Sunday shopping for supplies and getting ready for the 18-hour, 1,100 mile drive to Montgomery, Ala., where he will be dispatched to a shelter.

"Everything I need, I'm bringing," he said. "There won't be any Radio Shack to go to."

The 57-year-old has been a ham for more than 40 years. He has operated his radio from places as far as East Timor and the Balkans.

The hardest part will be "seeing people in this troubled state _ smelly, sick, depressed, angry. And no matter what any of us do, it won't be enough for all of them."

Ham Radio Operators Pitch In To Hurricane Katrina Relief Effort
General Interest
09/07/2005
With communications out all over New Orleans and the Gulf Coast, the professionals are turning to amateurs to be their ears to what's going on in the areas devastated by Hurricane Katrina.

Local operators say they've been in touch with people in and around New Orleans since the beginning of the ordeal.

Ed McLaughlin, of Kennewick, says in the days that followed the disaster, he was able to help a family in Medford, Ore., get an update on how their relatives were. He's provided similar contact for a family in Chicago.

The reason-- ham radio, which is able to get in places that have no other means for communication when land-based infrastructure fails.

Ham radio has been such a success during these recent days that FEMA and the Red Cross are now using it as their primary mode for communication until other modes of communication are restored.

News-Leader.com Springfield Mo.
Ham radio helps close communication gap

Nixa man relayed message from president to New Orleans' mayor.

Joe Hargis works on his amateur radio in his home in Nixa. Hargis helped rescue an elderly woman by notifying someone who could contact rescue workers via radio.

By Sarah Overstreet
News-Leader

If you've been unsuccessfully trying to get information about someone living in Hurricane Katrina's region of havoc, here's an avenue you may not have considered: local ham radio operators.

While cell phones rely on towers and traditional telephones rely on intact land lines, ham radios transmit from radio to radio, bouncing waves off the ionosphere in the upper atmosphere far above the Earth's tantrums. They can run off batteries, generators and sometimes even the sun.

Two Ozarks amateur ham radio groups - the Nixa Amateur Radio Club and the Christian County ARES (Amateur Radio Emergency Services) - have been relaying messages from people all over the world to those whose communication has been cut off by Katrina.

David Beckler, a ham radio operator from Nixa, even relayed a message Tuesday from the director of the Federal Emergency Management Agency in Texas to New Orleans Mayor Ray Nagin.

"He had a message from President Bush to the mayor of the city of New Orleans," says Beckler, a New Orleans native who moved to Nixa six years ago.

Since the message was an emergency communication, the dispatch needed to go through the net control station on an emergency frequency, Beckler said. He knew it was important, because the ham operator had said, "break, break, break," which requires all other communications to yield and give that one priority.

"The net control station or other stations on this frequency could not hear this message," Beckler says. Beckler contacted the net control station, and people there asked him to contact the sending ham operator and relay the message back to that operator. "That's when he told me it was from President Bush."

Joe Hargis, another Nixa ham club member, also helped with an urgent message. "I was monitoring the SATERN network (Salvation Army Team

Emergency Radio Network)," said Hargis, a retired elementary schoolteacher.

"A person called in with a piece of emergency traffic and the (receiving) person could not hear him. He said, 'Is there anyone on the frequency who can copy this?' I broke in and told him I could hear it fine."

Hargis relayed the message back to SATERN, and the operator there could hear Hargis well. "It was a 90-year-old woman and her elderly neighbors. They were afraid to leave their home because of the unrest in the neighborhood, things that were going on, and they needed assistance to be evacuated. They were running low on medicine, and one was running out of her oxygen supply."

Nixa ham club member Rod Kittleman says their members helped save the lives of a couple in New Orleans.

"A weak, disabled elderly couple were trapped in their attic. Their phone worked, but they couldn't get through to local authorities," the KADI radio program manager explains.

Too weak to break through their roof so emergency personnel could find them, the couple called their daughter in this area. She contacted the Nixa club, which relayed the message to a local ham operator who is licensed to operate on emergency frequencies.

"He got through to authorities in New Orleans over the radio, and they were rescued. (The ham operator) relayed the message back to their daughter. That's the reward we live for."

ARRL's Role In Rescue Offers Lessons For Future

Mark David
ED Online ID #11164
October 13, 2005

Investigations into the communications breakdowns in our national emergency response systems continue. Yet I'm struck by the contrast between the hue and cry for upgraded infrastructure solutions and the much quieter revelation that old-school ham radio provided the only trustworthy communication during Hurricane Katrina.

New Orleans emergency departments' radios were wiped out when broadcast towers lost backup power generators. Police and fire departments only had citizen-band radios, offering inadequate bandwidth. Emergency responders lacked coordinated frequencies.

The National Guard cited antiquated communications technology-as a contributor to its delayed response. Lt. Gen. Steven Blum told USA Today that there was a shortage of high-tech radios and satellite communications gear. "We were underequipped," Blum told USA Today. "We don't need tanks and attack helicopters... but we must have state-of-the-art radios and communications."

The Guard has historically gotten "handmedown" equipment from active-duty military. It now uses "Vietnam-era radios while it needs 37,000 newer radios," according to Guard budget briefings.

Meanwhile, ham radio operators proved that older technology can be the most reliable technology. Our EDA Editor (and ham) David Maliniak wrote an online column on the subject, pointing out that sometimes "old works when new doesn't." (Read it and add your comments at ED Online 11136.) During and after Katrina, hams running on generators (sometimes with makeshift antennas) worked throughout the hurricane zone to put emergency stations on the air. They guided rescuers to stranded victims and updated weather services via the Hurricane Watch Net.

Amateur radio was the primary means of contact with the outside world for many shelters. It's estimated that some 1000 amateur radio volunteers helped serve the hurricane-ravaged communities and shelters, even providing communications for the Red Cross.

Still, the real lesson of the ham radio successes isn't that old sometimes trumps new. Upgraded, reliable hardware is vital for adequate emergency response. Amateur radio has continued to upgrade too. Hams use satellites, digital systems, cross-band repeaters, and more. As the American Radio Relay League (ARRL) puts it, the Morse code key may still be on the desk, but generally it's next to a modern system operable under extreme emergency conditions.

DISTRIBUTED NETWORKS

Katrina taught two key lessons. First, the Amateur Radio Emergency Service (ARES) organization proved effective because hams don't depend on a centralized infrastructure. When cell towers, phone switching centers, or other central communicationsnetworks are down, hams aren't. Many operators have their own generators and are ready to fire them up to get on the air when there's no power. National disaster response plans must assume that the centralized communications infrastructure likely will be crippled, so the emergency system must include a distributed or "mesh" networking scheme.

Second, ARRL succeeded because operators subscribe to a mission that comes with their licenses-to be ready to provide emergency communications whenever and wherever they're needed. ARES has a well-conceived action plan coordinated through the Radio Amateur Civil Emergency Service (RACES). ARES is part of the ARRL, and RACES is coordinated through the Federal Emergency Management Agency (FEMA). But like the broacast system, the emergency plan is decentralized. Radio operators can work independently to serve their community as circumstances require.

A decentralized emergency plan requires deputized people who truly understand and care about their responsibilities. The best emergency response relies on distributed manpower, with first responders empowered to make decisions at the scene of the crisis.

It doesn't take a federal investigation to realize that the government's emergency-response debacle was caused by centralizing the decision-making with politically appointed bureaucrats who didn't have a personal mission or a true sense of ownership in ensuring preparedness. The fiasco with now-deposed FEMA leader Michael Brown exemplifies the folly of appointments based on cronyism, rather than the recruitment of people who have a passion, understanding, and commitment for the responsibilities they shoulder.

In this issue's cover story, Ron Schneiderman looks at government programs and the new technologies tackling our homeland security problems. But will the right people get those technologies? Too often, homeland security appointments and dollars are doled out according to political favoritism. As we saw in the recent emergency response, technologies are only effective when managed by people-like the hams-who take their responsibilities to heart.

Hats off to all of you who care about the quality of the security and emergency communications technologies you're engineering. Let's hope they end up controlled by people who care just as much.

A few months ago, NBC's Tonight Show staged a race between a pair of ham-radio operators with Morse-code keys and a couple of kids with text-messaging cellphones to see who could communicate faster. The hams won hands down, proving, in the minds of some, that old technology could hold its own against new. In recent days, ham radio was put to the test again by Hurricane Katrina. This time, however, lives were at stake.

In the world of design engineers and electronics in general, change is essential. Designers work diligently to make the fruits of their labors obsolete almost before they see daylight. The turnover in technology is sometimes like a flood, with old being washed away by new over and over. Often, the new beats the heck out of the old. But there are times when old isn't necessarily bad; in fact, sometimes old works when new doesn't. And then we're glad that old is still around, or at least we should be.

Wireless technology, while relatively new to many consumers, is of course not new at all. A few (very) old-timers remember the original "wireless" of radio. The revolution wrought by the pioneers of wireless changed the world then, and the technology behind that revolution has been re-invented and re-applied time and again. Its pre-eminent incarnation today is our near-ubiquitous wireless communications infrastructure, which has freed us from the shackles of landlines and made our mobile lifestyles possible. Technology truly is great stuff.

Until, of course, a monster hurricane comes along to render it nearly useless. Here we see a scenario in which a flood literally swept away the new. As Hurricane Katrina's fury hammered the Gulf states on August 29, the communications infrastructure took a devastating hit. Telephone service, including wireless, became at first intermittent and then unusable in many localities. Where there was phone service, 911 switchboards were often unreachable due to the massive volume of calls.

The response of local authorities, now termed "confused" by deposed FEMA chief Michael Brown, wasn't helping much. The Gulf Coast was about to descend into darkness, chaos, and, worst of all for many, silence.

But proponents of the old were at the ready. The "old," in this case, is ham radio. In the eyes of the "man on the street," ham radio has a pretty stodgy reputation. Aren't hams still using Morse code? Don't some of them use radios with tubes, for goodness sake? What the "man in the street" probably doesn't know is that it was amateurs who advanced the radio arts early in the 20th century. Down through the decades, amateurs have embraced (and often driven) all of the innovations in wireless technology, up to and including all digital modes and the Internet. But many have stayed in touch with their roots, which is good old-fashioned analog HF operation. And while amateurs have a longstanding tradition as innovators and experimenters, they also have a mandate that comes with their licenses: to be ready, willing, and able to provide emergency communications whenever and wherever they're needed.

As Katrina bore down on the Gulf region, amateur radio operators, under the aegis of the American Radio Relay League's (ARRL's) Amateur Radio Emergency Service (ARES), prepared to swing into action with emergency networks that would run health-and-welfare traffic into and out of the disaster zone. As early as the Monday following the storm, hams throughout the hurricane zone were putting emergency stations on the air. In one instance, hams were instrumental in the rescue of 15 people clinging for life to a New Orleans rooftop. Meanwhile, in Alabama, amateur SKYWARN weather nets kept the National Weather Service apprised of conditions throughout the state. In hard-hit sections of Mississippi, hams running off generators and with makeshift antennas were the only means of communication, getting word to out-of-state friends and relatives concerning their loved ones.

There were numerous other instances of hams helping those who were not simply inconvenienced by the storm, but whose lives were in imminent danger. Now that things have calmed down in the Gulf region, many of the emergency nets have stood down. But hams continue to serve the public in the many areas that are still without power or phone service.

As our nation collects itself in the aftermath of the Katrina disaster, President Bush has promised federal reviews of what went right and what went wrong. One of the findings of those inquiries should be that the federally-instituted Amateur Radio Service, which functions under the licensing authority of the FCC, stood tall when the country needed it.

Amateur radio currently faces various threats to its existence. Chief among those is the advent of broadband-over-powerline (BPL) technology, which, if broadly adopted, has the potential to cause widespread interference to HF communications, not just for amateurs but for other services that use the HF spectrum.

Amateurs and the ARRL have made a lot of noise about BPL, asserting that it could seriously hamper their efforts and those of relief agencies

such as the Red Cross and Salvation Army, in the event of a disaster such as Katrina. It's rumored, though, that the same FCC commissioners who have given their blessing to BPL field trials will now take a much harder look at the technical issues concerning BPL and its interference potential in the HF spectrum. Let's face it: The federal government didn't handle the emergency in the Gulf very well; it'd be prudent for it not to sanction a technology that could impede one of the few things that actually worked.

Many readers of this newsletter are amateur radio enthusiasts. If you are, and if you haven't already done so, consider writing your congressman to express your concern about the future of the Amateur Radio Service, especially in light of its outstanding efforts in recent days. Remind your elected representatives that a vibrant and unimpeded Amateur service can and will be a lifesaver when disaster strikes. Also, consider how you yourself might help. What if a hurricane, tornado, or earthquake ravages your area? Are you prepared to get on the air without relying on the mains to handle emergency traffic? Get in touch with your local amateur-radio club and find out how you can pitch in.

Your cell phones and wireless routers are indeed great stuff, but so is a good old HF transceiver. We shouldn't always be in such a hurry to let the flood of new technology wash away the old. The geek down the block with all the antennas on his property could turn out to be your best friend someday. Because sometimes, old trumps new.

Cmdr Buzz Corey posted:

"The state is full of simple minded dummycrat liberals."

I live in Masachusetts, and worse still, Gov. Mitt Romney is a Republican. (Our Lt. Govenor, Kerry Healey is no mental giant either.) Both are children of the idle rich, and neither has any perception of the real world in which most American's live.

What is even more frightening to me, it appears obvious to everyone in MA that Romney is posturing himself to run for President, and Healey to run for Govenor. Brrrrr...What a chilling thought. I'm a long-time registered Republican, and quite frankly I seriously doubt that Romney and Healey combined would be qualified to run for the local position of Dog Catcher!

With respect to Ms. Jacobsen... For many years she was married to Chet Curtis, another local news anchor, a private pilot and I believe a ham radio operator as well. So it figures that she would have reacted to Romney's ill considered remarks dismissing the important role of amateur radio in disaster communications.

Harry C.

p.s., If the above predictions become reality, I will be re-registering as a Democrat and working my arse off to defeat both of these candidates.

Help Great Bear Campaign Achieve Victory!

The campaign to save the Great Bear Rainforest, the world's largest
temperate rainforest located on the Central and North coasts of British
Columbia, Canada, is very close to a huge victory -- so close that a
historic agreement could be finalized within days -- but the provincial
government of British Columbia needs to feel pressure from people all
over the world right now to ensure that it takes one final step. PLEASE
WRITE A LETTER TO THE GOVERNMENT through the website:

www.savethegreatbear.org
If implemented, the Great Bear Rainforest agreement would be
unprecented in Canadian history. It would protect 33% of the Central
and North Coast regions (an area twice the size of Switzerland) from
logging, where all previous land use plans in BC have only protected
between 7% (Okanagan) to 14% (Lower Mainland) of their regions.
Please read the following statements from Greenpeace and from Guujaw
and Art Steritt of the coastal First Nations, and take action!

The Great Bear Rainforest - a decisive moment in history

Decisions are being made right now that will determine the future of
the Great Bear Rainforest and one party -- the Government of British
Columbia -- represents the final hold out. The logging industry,
unions, local communities, mining, recreational users, tourism
industry, Greenpeace and other environmental groups have put a
consensus recommendation forward. First Nations have melded these
recommendations with their own land use visions and are also ready for
change in the Great Bear Rainforest.

At this moment in time, this is the agreement that will be moved
forward or rejected. Please act now by sending a fax to the Premier of
British Columbia

We're talking about a massive paradigm shift

The scale of agreements in the Great Bear Rainforest go beyond protecting one single valley or establishing of one sustainable business venture. The campaign goals we all embarked on were grand and visionary covering 21 million acres, the traditional territory of 17 First Nations, and a region of economic importance to many, including 5 major multinational logging companies. To be successful and sustainable in this complicated political, economic and environmental landscape, conservation in the Great Bear Rainforest must not only protect the ecosystem, but also leverage change in multinational economic forces, respect indigenous cultures, and strengthen local stewardship efforts and economies.

The Government of British Columbia is currently confronted with a choice to support agreements that include:

Protect of an area 5 times the size of Prince Edward Island.

A commitment to take a first step and see implementation of new logging practices by 2009.

$120 million for First Nations to manage their parks, restore damaged watersheds, and build their tourism and alternative energy businesses. Up to an additional $80 million in socially responsible investments will be available for both native and non-native communities with ties to the current economy of the Great Bear Rainforest. Together these funds will enable locals to direct a new economy, rather than rely on multinational corporations that chose to enter the region (such as salmon farming and logging companies).

The protected areas network alone is not the only part of this package that addresses the future of the ecology of the Great Bear Rainforest. While it is the largest coastal rainforest protection package in Canadian history, what is on the table for consideration by the Government of British Columbia is about much more.

Government is letting this opportunity slide away and all that remains certain in the Great Bear Rainforest is 7% in existing protection, continued clearcut logging and communities with up to 80% unemployment and few options.

Help Greenpeace wake them up and turn the vision for the Great Bear Rainforest into reality

Amanda Carr
Greenpeace Forests Campaigner

To help save the Great Bear Rainforest, please send a fax to the BC government through the website www.savethegreatbear.org

****
Best Chance for Coastal Rainforest

by Art Sterritt and Guujaaw
Some continue to claim the proposed land use agreements to protect B.C.'s Central and North Coast -- also known as the Great Bear

Rainforest -- and the islands of Haida Gwaii don't go far enough. Others
think it goes too far.

As 12 first nations who live in these regions, our traditional territory, and who have 8,000 years of on-the-ground management experience, we believe those who make those claim fail to consider one critical question.
How do we integrate the needs of natural systems with the needs of the people who depend upon them for their livelihoods and way of life?

We live and work on this coast, where the forest and waters are a vital

natural, cultural and economic resource for first nations, coastal communities and B.C. as a whole.
To be successful, land use agreements must not only preserve the land and protect its ecological integrity -- they must also respect indigenous cultures and strengthen local economies.

To be successful, conservation must be sustainable, both ecologically and economically.

The coastal land use agreements, currently awaiting cabinet approval, do
both.

In these agreements, the total size of protected areas would be quadrupled to secure many of its most sensitive and intact valleys and islands.

This will be more than seven million acres of area protected from logging on the Central and North Coast and Haida Gwaii.
When approved, it will be the largest temperate rainforest protection package in Canadian history. The agreements also represent the first effort to apply ecosystem-based management on all areas outside the protected areas.
This amounts to re-engineering an entire regional economy, tuning it to

measurable indicators of ecological health and human well-being.

Through a declaration signed in June 2000, Coastal First Nations committed to making decisions that ensure the well-being of our lands and waters, and to preserve and renew their territories and cultures through tradition, knowledge, and authority.

Since then, this position has not changed, only strengthened, as we seek
to find more opportunities for conservation approaches based on independent science and local and traditional knowledge.

As well, we are looking for approaches for our coastal communities where
unemployment and poverty rates are well above national averages.

The intricate process that has led to this stage represents a commitment
to a new relationship between the provincial government and first nations.

Beyond mere consultation, this government-to-government relationship will allow for a more just approach to land use decisions today and in the future.

We believe the application of these land use agreements present the world with its best chance yet to integrate conservation, community development and first nations self-determination. We are supported by Greenpeace, ForestEthics, the Sierra Club of Canada B.C. Chapter, the Rainforest Action Network, the Nature Conservancy and others.
We are proud to support these agreements and are working with the British Columbia government to develop legal and legislative tools to make them a reality.

Art Sterritt is executive director of the Coastal First Nations of the Turning Point Initiative Society.

Guujaaw is the president of the Council of Haida Nation.

Superconductivity goes a pretty long way towards zero resistance. Wind a superconducting transmission line once around the equator and make your measurement on one end (leave the other end coming through your lab's back door alone). Then you have roughly 1/4 second to establish your DC resistance.

IOW The EM field in the dielectric can be several light-years away
(down the coax) from the electrons, protrons, anti-protons
or positrons in the coaxial conductor which it is related to?
No induced currents or voltages?

You think that resistivity controls the speed of light?
I think I heard that a good vacuum has a lot of resistance
but a fairly high speed of light.
The speed of light goes down as things become more
conductive?

CONTRACTOR'S STANDARD PIPE & FITTING SPECIFICATION

----

(1) All pipe is to be made of a long hole, surrounded by metal
concentric
with hole.

(2) All pipe is to be hollow throughout entire length. Do not use
holes
of different length than the pipe.

(3) All pipe is to be of very best quality, perfectly tubular or
pipular.

(4) All acid proof pipe is to be made of acid proof metal.

(5) OD of all pipe must exceed the ID otherwise the hole will be on
the outside.

(6) All pipe is to be supplied with nothing in the hole so that
water, steam,
or other stuff can be put inside at a later date.

(7) All pipe is to be supplied without rust, as this can be more
readily put
on at the job site.

(8) All pipe is to be cleaned free of any covering such as mud, tar,
barnacles,
or any form of manure before putting up, otherwise it will make
lumps
under the paint.

(9) All pipe over 500 feet long must have the words "long pipe"
clearly painted
on each end so that fitter will know that it is long pipe.

(10) Pipe over two miles long must also have these words painted in
the
middle so that fitter will not have to walk the full length of
pipe to

determine if it is long pipe or not.

(11) All pipe over six inches in diameter is to have the words "large pipe"
painted on it, so that the fitter will not use it for small pipe.

(12) All pipe closures are to be open on one end.

(13) All pipe fittings are to be made of the same stuff as the pipe.

(14) No fittings are to be put on pipe unless specified. If you do, straight pipe
becomes crooked pipe.

(15) Fittings come in all sort of sizes and shapes. Be sure to specify the
direction you are going when ordering.

(16) Fittings come bolted, welded or screwed -- always use screwed. They are
the best kind.

(17) Flange must be used on all pipe. Flanges must have holes for bolts
quite separate from the big hole in the middle.

(18) If flanges are to be blank or blind, the big hole in the middle must be filled
with metal.

(19) All flanges must be cast or forged of the very best iron metal, close
and grained, free from blow holes, lumps, cavities, pock marks, pin pricks,
and warts, otherwise we can't use them.

(20) Gaskets are to be used to fill spaces between flanges.

(21) Gaskets are to be made of metal, rubber, [plastic, paper or some kind
of goop -- do not use cow or sheep manure, it cracks when it gets dry.

(22) All bolts are to be screwed.

(23) All bolts must have a head on one end and a nut on the other.

(24) Bolts without heads are to be furnished as studs.

(25) Studs without heads are to be screwed all over and have two nuts which
is standard. Studs with three nuts are not to be used since they would
be odd.

(26) All nuts are to be furnished in sacks. Sacks must be whole and sound,
minimum two nuts per sack. Paper sacks will not be tolerated.

(27) All piping must be installed with valves.

(28) All valves must have an opening on each end with a flapper in the middle
that goes up and down or sideways when you turn the wheel or crank so
that it will open or close, otherwise the stuff will run out the ends.

(29) Valves are to be furnished by the kind required as follows:

Ball valves are to have a ball inside
Gate valves are to have a gate inside
Globe valves are to have a globe inside
Check valves are to have a check inside
Angle valves are to have an angle inside
Plug valves are to have a plug inside
Diaphragm valves art to have a diaphragm inside.

(30) Ball valves are not to be used anywhere with a female connection.

(31) Diaphragm valves are to be used with a female connection.

(32) All completed piping lines must go somewhere and connect to something.
The fitter is required to verify this before turnover.

(33) All pipes shorter than 1/8" are uneconomical in use, requiring many joints.
They are generally known as washers.

(34) Other commodities are often confused with pipes. These include: Conduit,
tube, tunnel and drain. Use only genuine pipe.

(35) Scottish Regiments in the Army use Army pipes in unusual ways. These are
not approved of in engineering circles.

(36) When ordering 90 degree or 30 degree elbows, be sure to specify right hand or left hand, other wise you will be going the wrong way.

(37) Be sure to specify to your vendor whether you want level, uphill or
downhill pipe. If you use downhill pipe for going uphill the product will
flow the wrong way.

(38) All coupling should have either right hand or left hand thread,
ut
do not mix the threads, otherwise, as the coupling is being
screwed on one
pipe, it's being screwed off the other.

(39) Joints in pipes for water must be water tight. Those in pipes
for
compressed air however need only be air tight.

(40) Lengths of pipe may we welded or soldered together. This method
is
not recommended for concrete or earthenware pipes.

(41) Pipe over 5 feet in diameter shall have an arrow* painted at 10
foot intervals
with the word EXIT.

(42) When such pipe is longer than 20 feet all the arrows* must point
in the
same direction.

* It has been suggested that the arrow(s) point to the open end
of the pipe.
This option is under study by the committee.

A war supporter disillusioned in Iraq

He believed in the fight, his family said, until he entered the war zone.

By Carrie Budoff
Philadelphia Inquirer
November 27, 2005

He went to war as a believer.
A proud professional firefighter and conservative Republican, Spec. John Kulick watched the World Trade Center burn and collapse, stealing thousands of innocent lives. He believed in the war against terrorism, and, at 33 years old, he decided to help fight it by joining the Pennsylvania National Guard as an infantryman 10 days before the Iraq invasion.

Kulick thought he'd rediscover the certainties of life that had begun to slip away after a difficult divorce and a separation from his young daughter.

Instead, daily life in a war zone delivered only more murkiness, more doubt. To his family, he expressed concern about poor equipment, misguided tactics, and slow progress in stabilizing the country against a seemingly invisible enemy.

On a two-week break in June, he sat at a local steak house and told the waitress that her boyfriend, a soldier preparing for deployment, should avoid going, family members recalled.

Kulick seemed to reflect the complicated nature of war now dominating the debate in Washington: He had misgivings, but he clung to the idea that somehow the United States could make a better Iraq, even as he began to accept that he might not make it out alive.

"If it's my time to go, it's my time to go," he told his mother during their last phone call, on Aug. 9. "I'm all right with that."

Ottavia Pell-Kulick, sitting in a Shore rental a world away, admonished him for thinking that way.

"Just know that I love you," he said before hanging up.

She walked onto the back porch. Alone, she prayed.

"Please, God, let him be safe," she whispered. "Please send him home to me safe."

.

As a child, Kulick rushed out of the house every time he heard the firehouse alarm. Wearing a red plastic helmet, he'd hustle down York Road in Abington on his Big Wheel, pedaling mightily to keep up with the engines roaring by.

Kulick sought refuge in the firehouse years later, as a teenager struggling with his parents' divorce. He volunteered over the years in Hatboro, Horsham, Warminster and Ambler and became a paid firefighter in Whitpain in 1998.

His fastidious personality fit the field.

He was a guy who tied the shoelaces on his boots before placing them in the closet. He designated positions on his plate for food - vegetable at 3 o'clock, sandwich at 6, dessert at 9. He kept an immaculate appearance. White teeth, polished boots, tucked-in shirt.

In 1994, Kulick married Jill Simpkins, the daughter of a retired Navy commander. She was attracted to his gregariousness. But their relationship dissolved in June 2001, and he was devastated by the divorce.

Jill Kulick said she feels responsible for rushing them, both "stubborn and temperamental," into marriage. His work hours created tension. She wanted to stay home with their daughter, Amanda Mae, now 8, but they couldn't afford that.

John Kulick entered a "pre-midlife crisis," said Bryan Pearsall, a close friend from Warminster.

.

They were still dressed in their firefighter uniforms. Kulick grabbed his partner, Donald Lynch, after finishing their shift at 2 p.m. and drove to the Plymouth Meeting armory.

It was March 10, 2003. A day earlier, Secretary of State Colin L. Powell had made clear on NBC's Meet the Press that the United States would invade Iraq with or without the United Nations' support.

"Are you sure you guys want to do this?" the recruiter asked the men, 30-somethings with stable jobs.

"Absolutely," said Kulick, who was then living in Harleysville.

The 9/11 attacks pushed Kulick into action, though he didn't act on impulse. He studied his options, listing the pros and cons on Post-it Notes.

Personally, Kulick considered the timing right.

"He felt like a failure in so many ways," though that was not the case, said Earl Simpkins, his ex-father-in-law, who talked with Kulick before he enlisted. "There are a lot of people who don't realize the contribution they are making."

His time was also running short. In 2003, recruits older than 35 needed a waiver to join.

A few friends called him crazy. His father backed him. His mother cried the first time she saw him in uniform, stoic with an M16 on his shoulder.

"My son saves lives," she thought at the time. "He couldn't kill anybody."

Although Kulick joined a Stryker brigade not fully capable for deployment until 2008, he was asked in spring 2004 to fill a vacancy in Alpha Company of the First Battalion of the 111th Infantry, which was headed to Iraq. He initially declined, having just returned from boot camp.

Days later, they called again.

"It was, 'Let's go. This is what I signed up to do,' " said Lisa Pearsall, Bryan's wife, who considered Kulick her best friend.

.

In a Dec. 10 e-mail, Kulick wrote:

Hey again from the sand dune,...

Well, yesterday we were visited by our Sec. Of Defense Donald Rumsfeld, for you non-republicans. Nice guy. It made national news and their were some pretty bad questions asked to him by the soldiers that are creating a big stink in the Military. We still don't have all the equipment we need before we go over the berm, and I hope we get it soon.

Kulick sounded upbeat, at first.

He requested care packages of Tastykake chocolate-chip bars and beef jerky. He congratulated friends and family on milestones. He playfully lamented living conditions at Forward Operating Base Summerall in Beiji, 155 miles northwest of Baghdad.

"The toilets don't flush with toilet paper so you have to put it in a trash can next to the toilet. (Smells great)," he wrote in a Dec. 17 e-mail.

But just days after crossing into Iraq from Kuwait, Kulick relayed a grim assessment: "Reality has struck."

A suicide bomber drove through the base's gate, and two mortar shells landed just outside.

"Thank the Lord they can't aim right," Kulick wrote.

More ominous news followed two weeks later.

"They tried to blow me up last week by an IED (roadside bomb) while on patrol," he wrote on Jan. 5, "but they're not going to get rid of me that easy."

His e-mails revealed complicated emotions.

In February, he wrote the wife of a Guard friend saying that her husband was "better off staying home."

"I'll switch places with him if he would like," Kulick said. Not long after, he said Iraq was "very depressing and you get homesick fast. I don't want to leave my family and friends again."

But a month later, he wrote that a batch of thank-you cards he received from third graders made him "feel really proud to serve here."

Small gestures pleased Kulick. He paid special attention to the Iraqi children, handing out toys and pens on patrols. His platoon sergeant, Anthony Kelly, said Kulick became a mentor to younger soldiers and used his emergency medical skills to assist injured civilians.

"John saved a lot of lives," Kelly said.

In May, Kulick's mood seemed to turn darker. His grandmother died. He had been quarreling with his ex-wife. U.S. military deaths spiked, hitting 80 that month, the highest since January, when 107 soldiers were killed.

"Things went down hill here the past two weeks," Kulick wrote on May 21. "It's been really bad. Stress is really getting me from... here and the homefront."

But he did have something to work toward: a two-week break in mid-June.

.

First, he went to the dentist.

Then, he bought a suit at Men's Wearhouse for a christening, picked up his daughter in Dillsburg, Pa., and settled in for barbecues, parties, and a trip to the Jersey Shore.

Friends found him at ease.

His family saw a man who was far more somber at times than ever before.

Privately, he confided in his parents and former father-in-law.

Iraq was a "hell hole," Kulick told them.

When they swept a town, the insurgents would return just days later. Foreign fighters were allowed to slip easily through unsecured borders. Army leadership seemed disorganized and disconnected from the ground. Certain tactics, such as 3 a.m. house raids, created a new generation of terrorists.

The military seemed to scrimp on armor but served filet mignon and lobster tails once a week. At first, the unit entered Iraq with crudely assembled armor, but the vehicles were upgraded over time, said Spec. Edward Greene, 28, of Gloucester City, who served with Kulick.

"I think his greatest disappointment in the Army was the way that the soldiers were treated," Jill Kulick said. "John had the same concerns that we all have here, and that is the fact that it doesn't look like we've really accomplished a lot in the improvement of the Iraqi people's lives and in eliminating terrorist activity."

His mom described him as "disillusioned" by a sense of helplessness.

To others, he indicated a continuing support for the mission.

"I think that the world is a much better place without Saddam," he wrote on Aug. 4 to Michael Tremoglie, a Whitpain resident who corresponded with Kulick. "Someone needs to be the Police in this world and the only superpower is us. The 1800 soldiers did not die in vain, and the war was justified. It's sad but I think the American people forget their feelings they had after 911."

As meticulous as ever, Kulick prepared for the worst. Before returning to Iraq from his break, he secured his will in a plastic storage bin, where his father would later find it resting on Kulick's perfectly folded suit from Men's Wearhouse.

.

On Aug. 9, Alpha Company tried working as if nothing had changed, even though three days earlier, the unit had suffered its first combat deaths: A roadside bomb had killed two soldiers.

He called his mother, father and daughter. He e-mailed his older brother, Jim Jr., and his sister-in-law, Susan:

Guys,

I am ok. The two that died were very good friends of mine from our unit. We are all devastated. Their memorial will be tomorrow. Other than that no new news. I hope everyone is doing ok there. I will be home the first or second week of November. Less than 90 days. Take care and please let everyone know I am fine. Thank You.

Love, JK

After sundown, Kulick set out with his unit to check out reports of shelling a few miles from the base.

They were moving north in four humvees when insurgents unleashed a complex attack, detonating a bomb buried under the road. Riflemen opened fire from a line of trees to the east.

The explosion killed Kulick and three others in the vehicle. Only body parts were recovered.

Spec. Edward Greene, who wasn't on the patrol but heard eyewitness accounts, said the vehicle had a basic armor kit.

"But to be honest with you," he said, "it wouldn't have mattered."

.

Jim Kulick Sr. lay in bed, unable to sleep. A day earlier, his son had told him what would happen if he died.

"You will know it is me when you hear a knock on the door," Kulick had told his father.

That knock came at 6:30 a.m. Aug. 10.

"I am here to inform you that your son, Spec. John Kulick, was killed last night in Operation Iraqi Freedom," the officer said.

"That can't be," his dad said. "I just talked to him not too long ago."

Dazed and disbelieving, he took a seat at his kitchen table in Rockledge, where he wrote weekly letters to his son, always signing the return label "Proud Army Dad Jim Kulick."

Eighty miles away, in Brigantine, Kulick's mom got the news from an officer at the other end of a telephone line.

In shock, she threw the phone across the living room and ran toward the beach, ripping a "Support Our Troops" bracelet from her wrist. She buried it in the sand.

.

Hundreds of people lined York Road - the same street where Kulick had chased fire trucks as a child - for his funeral.

A procession of fire engines carried him to his grave site. A UPS man stopped his truck and saluted. More than 60 towns sent firefighters in dress blues and white gloves.

"I wish he could have seen it," Jill Kulick said. "This would have shown him."

The mystery surrounding his death had made it harder for friends and family.

They weren't able to view his body. Details of the bombing have been contradictory. They question why he enlisted.

His friends channeled their grief into raising more than $25,000 for a memorial fund for Kulick's daughter.

His father, once a war booster and Bush supporter, turned against both.

His brother maintained for weeks that he would join the military - to avenge Kulick's death. Eventually, he backed down.

"Life was pretty simple, and I knew where I stood on everything," Jim Kulick Jr., of Doylestown, said. "Now it has been turned upside down. Someone blew my brother up, in a foreign land. It's not normal."

They felt desperate - for answers, emotional stability, relief. And they were willing to try anything.

So one month after their 35-year-old son's death, John's parents ended up where they least expected: at a Germantown interfaith service organized by antiwar activist Cindy Sheehan and her Bring Them Home Now Tour.

His mom wept. His dad looked uncomfortable, drawing back as people probed for details of his son's death.

He scribbled onto a piece of paper: "PEACE NEVER CAME," referring to his emotions and the war. He later tucked it into a hymn book and left.

++++++++++++++++++++++++++++++++
You mihgt find the story
at:<http://broadcastengineering.com/mag/broadcasting_future_video_utp/>
intersing.
It discribes using UTP (unshielded twisted pair) for video.

Mention is made of crosstalk.
For CAT5 cable 53dB of isolation at 4.2MHZ is acheived.
CAT6 gies 63dB at 4.2MHz.
Crostalk increases with frequency.

Another good refference that shows "failure" modes for twisted pair:
<http://www.extron.com/technology/archive.asp?id=utptechnology>

I have lost my bookmarks to a couple of links for coax cable "leakage"
and crosstalk specificitions. I will have to pull them from a backup
later this
week.

Why do you suppose that 99.99% of all CATV operations use coax for
the coper connections instead of twisted pair? Twisted pair is less
expensive,
so if it was "as good" as coax I suspect they would switch to it.

It has never been my contention that twisted and parallel balanced
pairs
have no place in the world. I just accept that while they do have many
usefull applicaitons, low level RF distribution isn't 'one of them.

By the way we are rolling out some component HDTV in house distribution
with CAT6 UTP. Looks pretty darn good after a 200' run. The CEO wanted
this and it was much cheaper to pull in good CAT6 then 4 coax cables.

When Johnny comes marching home again,
Hurrah! Hurrah!
We'll give him a hearty welcome then
Hurrah! Hurrah!
The men will cheer and the boys will shout
The ladies they will all turn out
And we'll all feel gay,
When Johnny comes marching home.

The old church bell will peal with joy
Hurrah! Hurrah!
To welcome home our darling boy
Hurrah! Hurrah!
The village lads and lassies say
With roses they will strew the way,
And we'll all feel gay
When Johnny comes marching home.

It's so hard to keep track! Just yesterday a scandal forced a vote of
no-confidence that toppled Prime Minister Paul Martin's government. Kickbacks
and corruption did him in.

>I read on this Newsgroup once a while back, where someone posted what length
>of wire for each frequency was needed to obtain the optimal reception.Can
>some repost this info?Thanks in advance...

Since there is an infinite number of frequencies, how about we do this the easy way instead of posting infinite wire lengths to match? :-)

To calculate the length, in feet, of a half-wave dipole antenna simply divide the number 468 by the frequency in MHz.

To calculate the length, in feet, of a quarter-wave vertical antenna simply divide the number 234 by the frequency in MHz.

It should be noted that these equations include a factor to account for end effects and is generally not as accurate for VHF/UHF antennas.

Hope this helps...

> I think the context is shortwave radio.
++++++++++++++++
I was tryihng to show the isolation of good quality UTP is around 63dB.
63dB is very good for a 1V video(RF from 0~5MHz), not so very good
for antena supplied RF.

Not near quite enough for my location.

Feel free to use any cable you wish.

I was trying to help newbies avoid the mistakes that I had already
made.

Given the cheap cost of a CB these days, I think that
any emergency comms center should have a CB radio.
In my home town we had a RACES set-up and had
several HF and VHF ham radios, scanners for
Monitoring local police/fire/etc
AND at least one CB radio.

Cheers,
Bill K2UNK

I dont know much about DU,but I do believe it is dangerous to humans and animals.I would think the DU dust does settle down onto the ground and most everything else too and the winds do carry it far and wide,including getting into the water.When I was in boot camp at Fort Gordon,Georgia,we trained with the old WW II/Korea era M-1 Garand Rifles.One day we praticed firing dummy SABOT rounds with the Rifles.An odd looking device that fits onto the Rifles and the device holds the SABOT rounds onto the Rifles and you have to hold those Rifles with the SABOT rounds attached to them in a certain way or they will knock the crap out of you.

Hams have minimal and the CB lobby is next to nothing.

I personally can't see where power line internet will be a real
challenge to current copper phone lines and fiber. With Verizon
spending billions to string fiber to individuals homes, it wont be
long before the lawsu its begin and they will have to grant access to
these. Once that happens powerline DSL in the US is a foot note in
history.

Just the same as police/government communications then... so no need for the
Hams after all.....

> >How are they doing this? in what way? Who are they talking to?
>
> Do they keep you locked in a closet?

Not at all. My point was do Hams just talk to themselves or are they set up
in important communications centres or are they at home, and phone up
someone with the information passed to them?

We do it in whatever way it
> takes to get the job done. We are like Marines. We adapt, overcome.

That explains the friendly fire.....

> the local neighborhood talk line where poeple can keep track of the
> people around them. It's pretty good for that.

If you had read my posts that was what i was referring to. Both services (CB and Ham) working together not CB instead of Ham... CB's could have been issued to the police to help organise themselves. They were not allowed Amateur gear because they arent licenced Hams. Then CB traffic passed on to Hams for the more distance and point to point stuff. THAT was what I was trying to get over.

>But handling actual
> emergency traffic? In most cases CB would be fairly useless.
> For many reasons. IE: the f??

//More long winded waffle//

Line up behind you.. oh right you seem to be in some sort of competition. Like I said before I wasn't posting about CB instead of Amateur, how many times do I need to point out what the post was about before it sinks in..... Now please put down that trumpet.....

Regards,
Graham

Nope.

Not at all.

You stated "just trying to kill a thread".

So my response was absolutely, positively 100% accurate.

> yes nothing wrong with trying to kill an OT discussion that is
> offesesive by it very title

YOU are offensive by your existence.

> so what does stevie do about it

I deceided to point out that you are attempting to practice
censorship, which is 100% accurate.

> he decides to revive the anti semetic thread

Nope.

> making the next the only proper response

Nope.

> Stevie must be some kind of NAZI

Nope.

> some repost this info?Thanks in advance...

The length of wire will change depending on the antenna type so you
will need to be more specific. If you meant to ask about a single wire
antenna then the answer is a 1/4 wavelength for the frequency of
interest.

The single wire antenna needs a RF ground to be effective so use a
ground rod or lay another wire on the ground under the single wire
antenna. You can improve the the wire performance with an UNUN coax
cable to wire impedance adapter at the RF ground rod.

Usually single wire antennas are not cut to a specific length and as
such are loosely defined as random wire antennas. Use a wire from 75 to
300 foot long for a table-top type radio and no more than 75 feet for a
portable radio or you may over load it.

For One and All,

New Kenwood R-5000 Receiver Owner - Asks What Antenna Do You Use ?
http://groups.yahoo.com/group/kenwood-r5000/message/1491
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6782

1. Here are three Messages posted on the Kenwood R-5000 Group
to Read :

* So You Put-Up an Outside Shortwave Antenna and Your Neighbors are...

http://groups.yahoo.com/group/kenwood-r5000/message/968

* BEST ANTENNA ! ~IMHO~ OutSide "Low Noise Design"
http://groups.yahoo.com/group/kenwood-r5000/message/307

* Low Noise (SWL) Shortwave Antenna for the Kenwood R-5000
http://groups.yahoo.com/group/kenwood-r5000/message/266

2. Here are three Messages posted on the SWL Antenna Group to Read :

* Low Noise "SWL" Antenna for the Kenwood R-5000
[NO Antenna Tuner Required]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1525

* Two (2) InDoor Antennas with the Kenwood R-5000 Receiver
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/854

* "Matching" the AM/MW Loop Antenna to the Radio
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/194

TIP - If you are in an Apartment or Condo and can not have
an "OutSide" External Antenna for your Kenwood R-5000 Receiver :
READ - Coax Cable [Shielded] Loop Antennas {GreerTech}
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1625

RHF Says - My "EveryMans" Shortwave Listening (SWL) Antenna :
* Low Noise Inverted "L" Antenna - a la John Doty
* Laid-Out : East (Bottom Tip) to West (Far End)
* 15 Foot Vertical-Up-Leg with a 30 Foot Horizontal-Out-Arm
* Wire Antenna Element = 50 Strands of #41 Litz Wire = 20 AWG
* TV 'type' 300 Ohm to 75 Ohm Matching Transformer
* RG6 Quad-Shield Coax Cable Feed-in-Line about 25 Feet Long

RHF Says - My AM/MW Antenna is a Kiwa AM/MW Air Core Loop Antenna

PORTABLE WHIP ANTENNA TIP
For a back of the Receiver "Whip" Antenna for your 'portable'
Radio Operations with your Kenwood R-5000 Receiver consider

the Miracle Whip Antenna.
MIRACLE => http://www.miracleantenna.com/MiracleWhip.html

QUESTIONS FOR EVERYONE TO CONSIDER AND COMMENT ON :

So... Lets Hear What Kind Of Wire You Got In The Air ? ? ?

Do You Have Separate Antennas for Shortwave and AM/MW
Radio Listening ? ? ?

What Antennas have you tried in the Past ? ? ?

i want to know ~ RHF

Calif. Rep. resigns over bribes By Jill Serjeant

LOS ANGELES (Reuters) -

U.S. Rep. Randy "Duke" Cunningham, a California Republican, fought back tears as he resigned on Monday after pleading guilty to taking $2.4 million in bribes in exchange for help in securing Defense Department contracts.

Cunningham, 63, an eight-term congressman and decorated Vietnam War pilot, admitted taking cash, antiques, a yacht, vacation expenses and money for his daughter's graduation party from several defense contractors between 2000 and 2005.

"I am resigning from the House of Representatives because I've compromised the trust of my constituents," Cunningham told reporters after a hearing in San Diego federal court.

He pleaded guilty to conspiracy to commit fraud, bribery and tax evasion, as well as one count of failing to report more than $1 million in income in 2004.

Cunningham's fall was the latest scandal to hit the Republicans who have controlled Congress for over a decade.

Former House Majority Leader Tom DeLay, a Texas Republican, was indicted in September on charges of breaking his state's campaign finance laws.

The Securities and Exchange Commission is investigating stock sales by Senate Majority Leader Bill Frist, a Tennessee Republican, and vice presidential aide Lewis Libby was charged last month with perjury over the leaking of a CIA operative's name.

House Democratic leader Nancy Pelosi of California said in a statement that the Cunningham case was "just the latest example of the culture of corruption that pervades the Republican-controlled Congress."

Cunningham, who denied any wrongdoing in July, said he was deeply sorry and ashamed and would cooperate in the government investigation of at least four defense contractors.

"I broke the law, concealed my conduct and disgraced my office. I know that I will forfeit my freedom, my reputation, my worldly possessions, most importantly, the trust of my friends and family," he said, choking back tears.

Cunningham had already said he would not seek re-election in 2006.

He will be sentenced on February 27 when he faces up to 10 years in prison.

His guilty plea followed several months of investigation by the Internal Revenue Service, the criminal investigative arm of the Pentagon, the FBI and federal prosecutors.

Cunningham is a member of the House intelligence committee and the appropriations sub-committee that controls defense spending.

"Yes, your honor," Cunningham said when Judge Larry Burns asked him if he had accepted bribes in return for influencing the award of tens of millions of dollars in defense contracts.

No contractors were named in the plea agreement but prosecutors said some months ago they were investigating the $1.6 million sale in 2003 of Cunningham's home in Del Mar, California, Mitchell Wade.

Wade was until recently the chief executive of Washington-based defense contractor MZM, Inc.

Wade quickly sold the home for a $700,000 loss in the midst of San Diego's booming housing market.

The U.S. Attorney's office in San Diego said another, unnamed, defense contractor paid off the mortgage on Cunningham's new multimillion dollar home in the San Diego area, while a third contractor provided a $200,000 downpayment on a condominium in Virginia.

Cunningham also received a yacht, a Rolls-Royce, jewelry, rugs and travel expenses, according to court documents.

As part of the plea agreement, Cunningham agreed to forfeit more than $1.8 million in cash, his interest in his San Diego homes and more than a dozen antiques and pieces of furniture.

What a stench!

4939. Reality Check on Iraq

Newsgroup: rec.radio.shortwave
Date: 2005-11-29 19:41:32 UTC
From: yojimbo <thomaspbyers@hotmail.com>
Message-ID: <6Y6dnWDchZRwMxHeRVn-uQ@golden.net>
Source record: 51790

Reality Check on Iraq
On Wednesday, President Bush will deliver an address at the Naval Academy in Annapolis, MD, in which, he is "expected to herald the improved readiness of Iraqi troops, which he has identified as the key condition for pulling out U.S. forces." The speech appears to be an effort by the Bush administration to lay the groundwork for potentially large withdrawals of troops in 2006 and 2007.

While Bush and critics of his Iraq policy may agree that a drawdown could be the proper action to take, they differ in one key respect - the rationale for why such a withdrawal is necessary. Rep. John Murtha (D-PA) recently argued that pulling out of Iraq is necessary because "the war in Iraq is not going as advertised. It is a flawed policy wrapped in illusion." Bush, on the other hand, is trying to suggest that a drawdown is the fruits of "good progress" being made in Iraq.

A review of the situation on the ground in Iraq demonstrates clearly that things are getting worse, not better:

- Approximately 100 Attacks Per Day; All-Time High. "Pentagon officials said that in October there were about 100 attacks a day in Iraq compared with 85 to 90 attacks a day in September - and about half of all attacks involve homemade bombs." That is the highest recorded level since the Iraq war began. By comparison, in January, nationwide figures hovered around 50 to 70 attacks per day. [CNN, 11/3/05; Boston Globe, 1/21/05; Brookings Iraq Index, p. 20]

- One of the Deadliest Attacks In Iraq Occurred Less Ten Days Ago. "Suicide bombers killed nearly 100 people Friday in one of the deadliest days of Iraq's insurgency, bringing houses down on sleeping families in Baghdad and shredding Shiite Muslim worshipers in two mosques in the eastern part of the country just as the victims turned their faces up to the preachers to hear their Friday sermons. Nationwide, the attacks were the deadliest since Sept. 14, when at least 14 insurgent bombings in Baghdad killed more than 160 people." [Washington Post, 11/19/05]

- Unemployment Rates At 40 Percent. [Biden speech, 11/21/05]

- Iraq Oil Production Is Below Pre-War Levels. Iraq's oil production "has fallen below prewar levels to its lowest point in a decade, depriving the country's fledgling government of badly needed income and preventing the United States from achieving one of its main reconstruction goals." [USA Today, 10/11/04]

- Water, Electricity, Health Networks Are Below Prewar Levels. "Stuart W. Bowen Jr., special inspector general for Iraq reconstruction, said

administration promises to use $18 billion Congress allocated to rebuild water, electricity, health and oil networks to prewar levels or better are running into cold reality. 'We are going to provide something less than that,' he said." [Washington Post, 10/19/05]

- As of November 28, 2005, at least 2,107 U.S. Troops Had Died In Iraq and Over 15,500 Were Wounded. [AP, 11/28/05; icasualties.org]

- Almost 94 Percent of All U.S. Fatalities Have Occurred Since "Mission Accomplished" (5/1/03). Over 2,059 U.S. troop fatalities since that date. [icasualties.org]

- Almost 60 percent of All U.S. Fatalities Have Occurred After The Transfer of Sovereignty (6/28/04). At Least 1,246 U.S. troop fatalities since that date. [icasualties.org]

- Insurgents in Iraq Have Kidnapped More Than 225 Foreigners. [Washington Post, 11/28/05]

- Over $250 Billion Spent On Iraq War. [Chicago Tribune, 11/16/05]

- Reconstruction of Iraq Has Been Spotty. "As the money runs out on the $30 billion American-financed reconstruction of Iraq, the officials in charge cannot say how many planned projects they will complete, and there is no clear source for the hundreds of millions of dollars a year needed to operate the projects that have been finished, according to a report to the U.S. Congress released Sunday." [NYT, 10/31/05]

- Number of Troops Trained. "[A]s it has been for the past two and a half years, it is unclear exactly what measuring sticks [Bush] is using, and whether they present the full picture." [NYT, 11/28/05]
February 2004: Number of Iraqi Troops Reportedly Trained = 210,000 [Rumsfeld, 2/23/04]
September 2004: Number of Iraqi Troops Reportedly Trained = 95,000 [CNN, 9/12/04]
Now: Number of Iraqi Troops Reportedly Trained = 212,000 [AP, 11/28/05]

- Dwindling Coalition.
Peak # of Countries in Coalition: 37
Current # of Countries in Coalition: 27 [Boston Globe, 11/27/05]

- Almost 3 Years Later, More Troops In Iraq.
# of American Troops In Iraq In May 2003: 150,000
# of American Troops In Iraq In February 2005: 155,000 [Reuters, 11/23/05; Brookings Iraq Index, p. 18]

Radio Hargeisa (Somalia) making a VERY weak appearance on 7530 here this afternoon in what might be Arabic sked at 1900-1920 per EiBi.

English is sked 1920-1940 but so difficult to pull anything out as the signal is still only at threshold level at 1940.

Hargeisa is sked to 2000, however Radio Tirana kicks on their transmitter at 1941 and begins English at 1945 spoiling any further chance of Hargeisa.

I don't (and won't) read all the way from the top of a thread every day
any addition happens along. I quoted an entire standalone paragraph
from your article; if you meant intelligent sources, you needed to
specify it there if only to cheat the effects of quote clipping.

Perhaps upgrading his booze supply would help. Who's up for taking up a
collection to get him some Sterno?

Sorry I thought this news group was about Shortwave, receivers and
antennas.

A special sub-part of the hobby is antenna and feedline inter-reaction
and how to get the strongest, cleanest RF signal from the antenna to
the
receiver.

I had hoped that we were having a somewhat serious fact based
conversation.

Sad to see how wrong I was.

Anyway, you are the very first person I have killfiled.
I had wrongly assumed that inpiste of your repeated OT politcal
comments
that you were a serious SWL. Sorry to waste our time.

Terry

Apparently, this is mail-order only or @ 1-800-344-4444 & give them the POS# I posted previously. To order online, go to www.thesharperimage.com , then click on TheSharperImage.Com-Coupons & Deals. Scroll down to Special Promotions Get 20% off any order (activated only by this link) click on start shopping, click on gifts $300 & up & go to 2nd page. They charge your state sales tax in most states + $26.95 UPS ground shipping & handling. But it still saves $43-$47 over $499.95 with free shipping & no tax. For $8.95 more. they'll send it 2nd day air or USPS priority.

If you order online, you must use "the" in the URL, the special deal does *not* come up if you use www.sharperimage.com

The buy one @ $499.95, get 2nd @ $399.96 is for the month of December & will apparently include in-store sales. George S., MN

>W were talking about DTV, but the only TV worth watching is movies and
>The Weather Channel. If TV is not important to you, quit whining
>about the mountains.

I'm not "whining" about the mountains, I'm pointing out that a bunch
of dumbshit politicians with dollar signs in their eyes made some
stupid decisions (pardon the redundancies) and are trying to foist
upon the public a technology that is both unnecessary and unworkable
for a large number of people.

When my government takes something away from me for no good purpose,
then I'm going to complain about it.

It's also curious that when I asked the chief engineer of a local VHF
TV station, who is a personal friend, why they didn't put a UHF
translator out my way he replied that they have wanted to for years
but the FCC would not grant a license. That spectrum is too valuable,
doncha know. So public interest isn't important, revenue is.

And I sure don't to pay big bucks to know what the weather is, when I
can walk outside and get an accurate picture, rather that some
wild-ass guess.

That might seem to be a "time constant" ... but the velocity of
light is a vector with units ... are the units even correct?

>> I think I heard that a good vacuum has a lot of resistance
>>but a fairly high speed of light.
>> The speed of light goes down as things become more

>>conductive?

>No, as they become less vacuumy.

Provably explains why glass & plastics of various densities have
various indexes of refraction, right?
It's clearly a mass effect (gravity), right?

OOPs !! The less dense plastics can have a higher index of
refraction .... and, as light always seems to take the path of
least time ..... (BTW, How does it know in advance what
path that is?)

And you failed to mention one of the most important features on the Sony 7600GR that the Degan lacks.
A Synch-Detector that actually works and is unavailable on ANY portable in its price class.

This is the actual radio conversation of a US naval ship with Canadian authorities off the coast of Newfoundland in October 1995. Radio conversation released by the chief of naval operations, 10-10-95.

CANADIANS: Please divert your course 15 degrees to the south to avoid a collision.

AMERICANS: Recommend you divert your course 15 degrees to the north to avoid a collision.

CANADIANS: Negative. You will have to divert your course 15 degrees to the south to avoid a collision.

AMERICANS: This is the captain of a US Navy ship. I say again, divert YOUR course.

CANADIANS: No, I say again, you divert YOUR course.

AMERICANS: This is the Aircraft Carrier USS LINCOLN, the second largest ship in the United States Atlantic Fleet. We are accompanied with three Destroyers, three Cruisers and numerous support vessels. I DEMAND that you change your course 15 degrees north. I say again, that's one-five degrees north, or counter-measures will be undertaken to ensure the safety of this ship.

CANADIANS: This is a lighthouse. Your call.

DX Ace was once a Swabbie......Can't you tell?

Sort of like a noise blanker in a Drake LOL!....The button is on the radio
but you can never tell if its on or off no matter what....

Yes, I'm so sure that conversation is completely real.

4996. Radiolabs Super 909

Newsgroup: rec.radio.shortwave
Date: 2005-11-30 01:49:26 UTC
From: Andrew <ahamil@nospameastlink.ca>
Message-ID: <2005112921492627590%ahamil@nospameastlinkca>
Source record: 51847

I have a DX 398 that has recently developed a bad speaker. I can buy a replacement very inexpensivly on the internet and replace it myself but I was wondering if it might be better to send it to Radiolabs and have the extensive Super 909 conversion done on it for $109.95 USD as they change the speaker as one of their mods.

Anyone have any experience with Th Radiolabs Super 909 conversion? Does it work as well as they say? I am actually very happy with my radio except for the recent speaker trouble but the mods do sound interesting.

Thanks in advance

Andy :)

Look here, much cheaper. Having owned (past tense) a Super 909, save
your money.

Ley Kiwa do the speaker replacement for you and you decide on the audio
mods from them.

http://www.kiwa.com/ATS909.html

leslocklearatcableonedotnet

fix above to reply

Thanks for your reply...

It is Kiwa that I have been in contact with. They have a better quality replacement speaker for $5 USD and I was considering that.

Andy :)

What you are reading is a language called "Knollish". It's different
from English because:

1. the punctuation is missing
2. many of the words are misspelled and garbled imitations of English
words
3. he uses the wrong verbs
4. very often, 3 or 4 sentences are run together as if they were one

He has lived In English speaking Canada for more than 40 years and
hasn't progressed further than this. Hopefully, by the beginning of the
next millenium, he'll have corrected one of the four deficiencies
listed above and we might be able to understand 50% of what he says.
(But don't bet your life savings on it)

No way. I have run both, extensively, for MW DX where noise is a critical
consideration. The Drake can dig things out that the R390 masks. And that
was an R8. The 8B is a bit better.

I've got a Sangean Super 909 that I got from Radiolabs already modded.
I don't have much experience with an unmodified 909, but I can tell you
that I'm extremely happy with my Super 909. I've read many reviews
about the modified 909 and most were very positive, but here a link to
one that seems to be pretty objective and critical
http://www.monitoringtimes.com/html/mtsuper909.pdf
Hope this helps a bit.

How quickly it settles is dependent upon the moisture wind in the area. A heavy rain would mean very little would be suspended prior to settling. Dry air, without any wind, gives it a little range and all bets are off with a strong wind. Large particles will settle the quickest and smaller particles will take more time.

D-Ex-Ace Quisling,

Of course you didn't do a search. So tell me why you pulled the "Dr." out of the air and added it before my name?

You give new meaning to the term "lying putz".

David:
Don't get me wrong - I love that R-390. But you're wrong about the bells a whsitles. A sync detector is a wonderful AM tool. A sideband selectable sync detector is even better: reduced fading distortion AND less adjacent channel interference.

I just replaced the speaker in both of my 909/398's. Got the
replacement speakers for $1 each. Amazing difference. If you go
here:

http://www.acidplanet.com/artist.asp?PID=673036&t=9611

and press play, you can hear the difference.

If you wish to read about my play-by-play on the replacement...it is in
recent messages posted to the Yahoo 398 group.

I am not much of a techie and I was able to make this repair. If II
can help you further let me know.

Flying Saucer Cult near Trementina, New Mexico
by National Coalition of Human Rights Activists
Tuesday, Nov. 29, 2005 at 10:09 AM
nchrs@noszp.hotmail.com

Deep in the lonely, isolated wilderness of New Mexico resides a secret cult compound built and maintained by a flying saucer cult. The United States Department of Internal Revenue calls the organization a for-profit business and the United States Supreme Court agrees; "Time" Magazine called the organization a cult of greed and power; human rights activists throughout the world call the organization an international crime syndicate; dozens of courts throughout the world have called it dangerous, corrupt, venal, and criminal; Tom Cruise calls it his "church."

Who are they? Where are they? Why are they there?

These questions and more are answered here.

L. Ron Hubbard was a third-rate Science Fiction writer in the 1930s and 1940s who tried to make a living writing for a penny a word. World War Two put his career briefly on hold long enough for him to be giving command of a coastal submarine chaser for the United State's Pacific Coast. He promptly attacked Mexico and depth-charged a magnetic anomaly off the coast of Oregon, and he was relieved of command twice and called unfit to perform any duty. He never saw combat. Hubbard abandoned his first wife and children after the war, and later in life he denied ever knowing them.

Hubbard found it impossible to go back to scrounging out a living writing; he told a few science fiction writers that he had a plan on how to make real money. Hubbard sat down in his office one day and three weeks later he had written the book "Dianetics." Most reviewers of the book called it pure nonsense; several reviewers noted that the book is one long abortion fantasy with sexual sadism and women-hating liberally sprinkled within. Hubbard, however, called his book "The Modern Science of Mental Health."

The book "Dianetics" became a brief fad and several thousand copies were sold to ignorant readers who believed it was actual, scientifically researched science. Hubbard created a "Dianetics Foundation" to sell medical "Dianetics cures" and

medical treatment to his new customers, even though he was not a physician and his foundation was not licensed to practice medicine.

The fad died out and Hubbard's "foundation" was facing bankruptcy. Hubbard had another idea to make money: he told several of his writer associates that writing for a penny a word was stupid and that to really make money one should start a religion. Hubbard pursued what he called (in writing) "the religion angle," and he told the staff of his "Dianetics Foundation" that the religion angle was not to be taken seriously, and that it was only a matter of taxation, "lawyers and accountants."

L. Ron Hubbard took "Dianetics" and expanded it into what he called "Scientology," borrowing the word from a previous (German) writer. For the next 34 years he wrote all kinds of science fictional stories and claims, only this time he called his stories "technology" and he sold that "technology" for very high prices to his Scientology customers.

A very large part of that "technology" involves flying saucers and aliens from outer space. Hubbard insisted, and sold to his customers as a matter of scientific fact, that 75,000,000 years ago there was an evil tyrant named Lord Xenu. Xenu had a very large population problem that he needed to solve, and he solved it by murdering trillions of people; he packaged these people by freezing them in a mixture of alcohol and glycol, and then transported them all to Earth which, 75,000,000 years ago, was then known as Teegeeack. Xenu then dropped the frozen bodies of these space aliens into Earth's volcanoes, and then Xenu dropped hydrogen bombs on the volcanoes. This released the souls of the space aliens, which Hubbard called "Thetans," to roam in the atmosphere of Teegeeack (Earth).

Not content with killing trillions of people, Xenu wanted to control and confuse these "Thetans" so that they would never remember who they are. So Xenu trapped all of these trillions of souls using a magnetic tape and then he brainwashed them by showing them movies. One movie he showed them, which Hubbard called "Implanting," was Christianity, Jesus, and the Christian Heaven ("the R6 Implant" according to Scientology); Xenu also implanted the other religions into these Thetans, as well as most phobias, and also the "belief" that the physical universe is real.

The brainwashed Thetans now believed in religion, were fearful of irrational things, and believed they were physical beings. Hubbard wrote and lectured that Lord Xenu used religions such as Christianity, Islam, Judaism, and others, as a tool to zcontrol and dominate these Thetans. Lord Xenu then dropped these Thetans back on Teegeeack (Earth) where they roamed,

looking for bodies to inhabit.

Humanity evolved ("from clams" according to Hubbard, which he called "boohoos and weepers") and the Thetans attached themselves to the human bodies.

And that is, according to Hubbard and the Scientology Corporation, how life currently exists on Earth today: every human being is covered in Body Thetans (the spirits of murdered aliens from outer space), and that alien infestation is the source of all of humanity's problems.... and only Scientology can remove these Body Thetans.

And that removal is not cheep. Most Scientology customers spend around US$400,000 to have their imaginary Body Thetans removed from them. (Tom Cruise, for example, has spent millions of dollars getting his Body Thetans removed.) Other victims have also spent a million dollars or more having their Body Thetans removed.

Along the way, a very great many Scientology victims have died due to Scientology; most have killed themselves, and others have died in very strange and mysterious circumstances. At least one was even tortured and killed while at Scientology Headquarters in Clearwater Florida (see http://whyaretheydead.net for a brief list of dead victims).

Meanwhile, Hubbard turned his business into an international Mafia-like organization that engaged in various crimes such as the infiltration and theft of documents from a number of prominent private national and world organizations, law firms and newspapers; the execution of smear campaigns and baseless law suits to destroy private individuals who had attempted to exercise their First Amendment rights to freedom of expression; the framing (of crimes) of private citizens who had been critical of Scientology, including the forging of documents which led to the indictment of at least one innocent person; violation of the civil rights of prominent private figures and public officials; the burglary of Government offices; the theft of Government property; the interception of private Governmental communications; the obstruction of the Federal Bureau of Investigation and Grand Jury investigation into those burglaries; thefts, and electronic "buggings" of government offices and private citizen's residences and business offices; the harboring and concealment of a fugitive from justice; and the making of false declarations to the federal Grand Jury.

In 1986 Hubbard died a raving psychopath while hiding from the FBI, INTERPOL, and NSA --- a hunted fugitive and a convicted felon. His third wife, and 10 other Scientology crime figures, were sent to prison.

This finally brings us to Trementina, New Mexico. Scientology salespeople and staff members who wish to help "clear the planet" of Body Thetans may sign up for the Scientology Corporation's "Sea Organization." Sea Org victims sign a contract that says they will work for Scientology for one billion years. This means they have pledged many of their future lives, as well as their one and only real life, in the service of Scientology.

In the desert near Trementina, and also near Las Vegas, New Mexico, the Scientology flying saucer cult purchased land, around the year Hubbard died, that will house all of Hubbard's written works. The vault is located at Latitude North 35 degrees 31 minutes 56.59 seconds, Longitude West 104 degrees 37 minutes 45.48 seconds. Included at the site is a huge symbol gouged into the Earth ("Teegeeack" according to Scientology) that is there to help guide returning Sea Org staff members, in flying saucers, back to Scientology after they reincarnate on other planets, thousands and millions of years from now.

At present (year 2005) there are 53,000 Scientologists in the United States and another 19,000 Scientologists in the rest of the world. The Scientology Corporation claims they have over eight million customers, but that claim is known to be false.

(I think that I'd feel much better sending $10 to that fat fugly bitch with the bad hairdoo on TBN than sending one penny to scientology)

These are supposed to be wadley loop design receivers but after looking
through the manual for the R1530 I just got, that simply is not true !
so don't tell anyone its a wadley loop !

oops. ya might wanna re-think that statement :)

here I was thinking the propagation velocity varied as 1/sqrt(Ur*Er)

where Ur and Er are the relative permeability and permittivity,
respectively.

Cheers
Terry

5045. Re: Galaxy R530 and R1530

Newsgroup: rec.radio.shortwave
Date: 2005-11-30 11:40:29 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <1u6dnXtkpacwEhDenZ2dnUVZ_vmdnZ2d@comcast.com>
Source record: 51996

It is very similar to the Wadley loop.....basically, it uses a 1MHz crystal oscillator as a reference. This oscillator is divided down to 500kHz, which is your reference. This 500kHz oscillator is very rich in harmonics (comb generator). A tracking preselector is used to tune to each harmonic, which is applied to one input of a mixer.....the VFO signal is applied to the other input of this mixer in a premixing scheme similar to the Drake receivers.
This same scheme is used in the Sony 6800 receivers, as in the FRG-7.
Usually, after several years, component drift causes the PLL to unlock.....this is the main reason that people get rid of these receivers.
I've had a couple of them over the years, with the optional AM filter. They are pretty decent receivers. The main difference between this receiver and the R1530 is that the 1530 uses FETs in the front end and uses hot carrier diodes in the 1st mixer. The former owner of one of the 530s that I had upgraded the mixer to this type of diode. I am not sure what kind of diode he used, but the receiver had poor sensitivity across the whole tuning range. It might have been low LO injection.....I don't know. I was new to receiver topology in those days.
One upgrade would be to replace that 1st mixer with a Mini-Circuits SRA / TUF / TFM3. Either one of these 3 mixers would work very well in this application. That would probably solve the problem of the relatively poor MW performance. I remember that below 2MHz, the receiver sensitivity would droop. One of these days I will pick up another unit and do the upgrade.
Harry Blessey, the local antique radio person who heads up the antique radio club in the Chicago had an R1530 about a year ago. He sold it in the 600 dollar range. I would have liked to buy that one!

5053. My AK47 - a BBC World Service series

Newsgroup: rec.radio.shortwave
Date: 2005-11-30 13:07:28 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <438DA410.3C81C4BF@milestones.com>
Source record: 51855

The AK47 is the weapon of choice for guerrilla fighters world-wide, with an estimated one million of the Kalashnikov rifles in every-day use. Its reliability and ease-of-use has made it the most widely used and produced small arm over the last century. BBC World Service sets out to find how AK47s are distributed and who are the people who use the weapon in a series called My AK47, going out on The World Today from Sunday 4 December.

Series producer Leana Hosea says: "The personal accounts given by people who use, sell and distribute AK47s give listeners an insight into how the weapon has become a reality of life in many parts of the world. One interview is with an AK47-equipped child-soldier in Sierra Leone. According to the UN there are an estimated 300,000 children involved in armed conflict and nearly half of them are in Africa. Sangeba was only 12 when his mother was beaten and his father killed in front of him by rebels who forced him to become a child soldier. In another interview, an illegal arms dealer in Sri Lanka reveals how it's routine to obtain Ak47s and other small arms, such as grenades from the army, air force and police."

The series also includes interviews with a UN weapons investigator, a guerilla fighter in Columbia, a rehabilitation worker from Sierre Leone and with Vybz Kartel, the Jamaican dancehall star who sings about AK47s and violence in the country's capital.

The series will run on The World Today on
BBC World Service, going out
at 2300 GMT and through the night from 4
to 8 December 2005.

Hi
Just bought one of these Tecsun PL-230 of ebay.
I wa very surprised with its performace.
I found it to be as good as my Sony7600GR, no ssb of course, but the sensitiviy and sound quality is excellent, I would recommend this radio to anybody

>Does Greenpeace attack Inuits who go whale hunting?
Just curious.

--Mike L<

Greenpeace, AFAIK, harasses the big factory whaling operations that massacre hundreds at a time. While I am certain that many of them sympathize directly with the whales (I know I do), their fundamental goal is species and oceanic preservation. The same is essentially true of Sea Shepherd, although I think their people may even more strongly identify with the plight of the whale being hunted.

I don't think they bother the Inuits or others who hunt on a subsistence basis, although if the target species is truly endangered they work to find other options.

Screw someone? No, that's David Duke, who bilks the white power crowd
and gambles the money away (while admiting that he likes to watch the
African-American dominated NFL!!). Or the National Alliance, that has
squandered more funds than anyone this side of Enron.

Try again Kurt.

Yes, noise blankers are in my experience for button freaks! My Kenwood
R-5000 had two of them and a level control. For the most part they
didn't make the signal less intelligible.

Hmmm, I really like the noise blanker on the R8B. Someone upstairs from me a couple of days ago was running a power drill and it was wreaking havoc on my reception. I hit the noise blanker on the R8B and the noise vanished....completely!

Steve

I read that conversation at another website about four years ago.I
realize the U.S.Navy does not officially talk that way to other
Ships.They have their own official style of lingo they use when talking
to other Ships and also U.S.Navy Aircraft and U.S.Navy Submarines and
whatever else when on official duty.

That has not been my experience with the Sony 2010 anyway. It very
much can make the difference between intelligibility or not. The
synch detect on the 7600g(r) can make a difference but it is not nearly
as dramatic on the 2010.

The synch detect on the R75 (after Kiwa mods) also is very effective.

The synch detect on the Grundig Sat 700 was not that great.

I have heard that the synch detect on the new E1 is quite effective and
I have heard the same about the circuit on the Drake R8B. I don't have
any experience with these 2 radios however.

It's very difficult to lose a patient. I took it very personally on the
infrequent occasions when it happened. But it goes with the territory.
Did I find it convenient to be a neurosurgeon? What kind of stupid question
is that? Do you find it convenient to be an ignorant bigoted netwacko?
Hatred is something I leave to the province of you and your ilk. Contempt
is more descriptive of how I feel about you and your pals. Now, should you
ever require neurosurgery and find a brain to transplant into that thick
skull of yours, do get in touch. I'll come out of retirement and operate on
you for free.

I'll have to listen for this program though I expect a good bit of individual anti-gun bias. The UN wants to eliminate all individual gun rights world wide so everyone is at the mercy of their respective governments and won't be able to defend themselves against criminals relying on whatever government protection exists for them. I expect this program to reflect this sentiment.

Vietnam was a Halliburton War, same as Iraq. The only purpose was to
create a chaotic situation where Brown and Root and Bechtel can rob
the American taxpayer.

Thanks for this, George! No hitches using POS# 26366 by phone.

Ordered today.

Even with the Sharper Image's hefty shipping charge and with tax, this
easily saved me around $65 to $70 over ordering from elsewhere
(w/shipping charges but w/out tax) or buying in-store (& paying tax).

Junius

How wide are the filters in a 2010? Maybe they used the synch detector
(ie. image reject mixer) as a way to cheap out on the bandpass filter.

I've read of folks havin' this experience. Thankfully, I've not experienced this with any of my Sonys ('SW77, '2010, 'SW7600G, 'SW07). Before getting the 'SW7600G, the 'SW7600 was my primary travel radio. I have found the sync detector feature in the 'SW7600G to more than justify the upgrade. It certainly improves the radios selectivity in AM mode. When I spent a number of months abroad a last year, I opted to take the '606AP instead: that was a mistake. '606 is a decent little radio, but you don't want to have it as your sole choice over any sizeable duration.

That's the wrong reason to change parties. First of all, look at your values and compare them to the values & policies of the various parties. Join that party whatever it may be and whoever may be the leaders. Then if you don't like the leaders, work your arse off to get different leaders within the party. What good does it do you to joint a party which may be diametrically opposed to your points of view !?

THE CONFLICT IN IRAQ
U.S. Military Covertly Pays to Run Stories in Iraqi Press
Troops write articles presented as news reports. Some officers object to the practice.
By Mark Mazzetti and Borzou Daragahi
Los Angeles Times Staff Writers

November 30, 2005

WASHINGTON - As part of an information offensive in Iraq, the U.S. military is secretly paying Iraqi newspapers to publish stories written by American troops in an effort to burnish the image of the U.S. mission in Iraq.

The articles, written by U.S. military "information operations" troops, are translated into Arabic and placed in Baghdad newspapers with the help of a defense contractor, according to U.S. military officials and documents obtained by the Los Angeles Times.

Many of the articles are presented in the Iraqi press as unbiased news accounts written and reported by independent journalists. The stories trumpet the work of U.S. and Iraqi troops, denounce insurgents and tout U.S.-led efforts to rebuild the country.

Though the articles are basically factual, they present only one side of events and omit information that might reflect poorly on the U.S. or Iraqi governments, officials said. Records and interviews indicate that the U.S. has paid Iraqi newspapers to run dozens of such articles, with headlines such as "Iraqis Insist on Living Despite Terrorism," since the effort began this year.

The operation is designed to mask any connection with the U.S. military. The Pentagon has a contract with a small Washington-based firm called Lincoln Group, which helps translate and place the stories. The Lincoln Group's Iraqi staff, or its subcontractors, sometimes pose as freelance reporters or advertising executives when they deliver the stories to Baghdad media outlets.

The military's effort to disseminate propaganda in the Iraqi media is taking place even as U.S. officials are pledging to promote democratic principles, political transparency and freedom of speech in a country emerging from decades of dictatorship and corruption.

It comes as the State Department is training Iraqi reporters in basic journalism skills and Western media ethics, including one workshop titled "The Role of Press in a Democratic Society." Standards vary widely at Iraqi newspapers, many of which are shoestring operations.

Underscoring the importance U.S. officials place on development of a Western-style media, Defense Secretary Donald H. Rumsfeld on Tuesday cited the proliferation of news organizations in Iraq as one of the country's great successes since the ouster of President Saddam Hussein. The hundreds of newspapers, television stations and other "free media" offer a "relief valve" for the Iraqi public to debate the issues of their burgeoning democracy, Rumsfeld said.

The military's information operations campaign has sparked a backlash among some senior military officers in Iraq and at the Pentagon who argue that attempts to subvert the news media could destroy the U.S. military's credibility in other nations and with the American public.

"Here we are trying to create the principles of democracy in Iraq. Every speech we give in that country is about democracy. And we're breaking all the first principles of democracy when we're doing it," said a senior Pentagon official who opposes the practice of planting stories in the Iraqi media.

The arrangement with Lincoln Group is evidence of how far the Pentagon has moved to blur the traditional boundaries between military public affairs - the dissemination of factual information to the media - and psychological and information operations, which use propaganda and sometimes misleading information to advance the objectives of a military campaign.

The Bush administration has come under criticism for distributing video and news stories in the United States without identifying the federal government as their source and for paying American journalists to promote administration policies, practices the Government Accountability Office has labeled "covert propaganda."

Military officials familiar with the effort in Iraq said much of it was being directed by the "Information Operations Task Force" in Baghdad, part of the multinational corps headquarters commanded by Army Lt. Gen. John R. Vines. The officials spoke on condition of anonymity because they were critical of the effort and were not authorized to speak publicly about it.

A spokesman for Vines declined to comment for this article. A Lincoln Group spokesman also declined to comment.

One of the military officials said that, as part of a psychological operations campaign that has intensified over the last year, the task force also had purchased an Iraqi newspaper and taken control of a radio station, and was using them to channel pro-American messages to the Iraqi public. Neither is identified as a military mouthpiece.

The official would not disclose which newspaper and radio station are under U.S. control, saying that naming them would put their employees at risk of insurgent attacks.

U.S. law forbids the military from carrying out psychological operations or planting propaganda through American media outlets. Yet several officials said that given the globalization of media driven by the Internet and the 24-hour news cycle, the Pentagon's efforts were carried out with the

knowledge that coverage in the foreign press inevitably "bleeds" into the Western media and influences coverage in U.S. news outlets.

"There is no longer any way to separate foreign media from domestic media. Those neat lines don't exist anymore," said one private contractor who does information operations work for the Pentagon.

Daniel Kuehl, an information operations expert at National Defense University at Ft. McNair in Washington, said that he did not believe that planting stories in Iraqi media was wrong. But he questioned whether the practice would help turn the Iraqi public against the insurgency.

"I don't think that there's anything evil or morally wrong with it," he said. "I just question whether it's effective."

One senior military official who spent this year in Iraq said it was the strong pro-U.S. message in some news stories in Baghdad that first made him suspect that the American military was planting articles.

"Stuff would show up in the Iraqi press, and I would ask, 'Where the hell did that come from?' It was clearly not something that indigenous Iraqi press would have conceived of on their own," the official said.

Iraqi newspaper editors reacted with a mixture of shock and shrugs when told they were targets of a U.S. military psychological operation.

Some of the newspapers, such as Al Mutamar, a Baghdad-based daily run by associates of Deputy Prime Minister Ahmad Chalabi, ran the articles as news stories, indistinguishable from other news reports. Before the war, Chalabi was the Iraqi exile favored by senior Pentagon officials to lead post-Hussein Iraq.

Others labeled the stories as "advertising," shaded them in gray boxes or used a special typeface to distinguish them from standard editorial content. But none mentioned any connection to the U.S. military.

One Aug. 6 piece, published prominently on Al Mutamar's second page, ran as a news story with the headline "Iraqis Insist on Living Despite Terrorism." Documents obtained by The Times indicated that Al Mutamar was paid about $50 to run the story, though the editor of the paper said he ran such articles for free.

Nearly $1,500 was paid to the independent Addustour newspaper to run an Aug. 2 article titled "More Money Goes to Iraq's Development," the records indicated. The newspaper's editor, Bassem Sheikh, said he had "no idea" where the piece came from but added the note "media services" on top of the article to distinguish it from other editorial content.

The U.S. military-written articles come in to Al Mutamar, the newspaper run by Chalabi's associates, via the Internet and are often unsigned, said Luay Baldawi, the paper's editor in chief.

"We publish anything," he said. "The paper's policy is to publish everything, especially if it praises causes we believe in. We are

pro-American. Everything that supports America we will publish."

Yet other Al Mutamar employees were much less supportive of their paper's connection with the U.S. military. "This is not right," said Faleh Hassan, an editor. "It reflects the tragic condition of journalists in Iraq. Journalism in Iraq is in very bad shape."

Ultimately, Baldawi acknowledged that he, too, was concerned about the origin of the articles and pledged to be "more careful about stuff we get by e-mail."

After he learned of the source of three paid stories that ran in Al Mada in July, that newspaper's managing editor, Abdul Zahra Zaki, was outraged, immediately summoning a manager of the advertising department to his office.

"I'm very sad," he said. "We have to investigate."

The Iraqis who delivered the articles also reaped modest profits from the arrangements, according to sources and records.

Employees at Al Mada said that a low-key man arrived at the newspaper's offices in downtown Baghdad on July 30 with a large wad of U.S. dollars. He told the editors that he wanted to publish an article titled "Terrorists Attack Sunni Volunteers" in the newspaper.

He paid cash and left no calling card, employees said. He did not want a receipt. The name he gave employees was the same as that of a Lincoln Group worker in the records obtained by The Times. Although editors at Al Mada said he paid $900 to place the article, records show that the man told Lincoln Group that he gave more than $1,200 to the paper.

Al Mada is widely considered the most cerebral and professional of Iraqi newspapers, publishing investigative reports as well as poetry.

Zaki said that if his cash-strapped paper had known that these stories were from the U.S. government, he would have "charged much, much more" to publish them.

According to several sources, the process for placing the stories begins when soldiers write "storyboards" of events in Iraq, such as a joint U.S.-Iraqi raid on a suspected insurgent hide-out, or a suicide bomb that killed Iraqi civilians.

The storyboards, several of which were obtained by The Times, read more like press releases than news stories. They often contain anonymous quotes from U.S. military officials; it is unclear whether the quotes are authentic.

"Absolute truth was not an essential element of these stories," said the senior military official who spent this year in Iraq.

One of the storyboards, dated Nov. 12, describes a U.S.-Iraqi offensive in the western Iraqi towns of Karabilah and Husaybah.

"Both cities are stopping points for foreign fighters entering Iraq to wage their unjust war," the storyboard reads.

It continues with a quote from an anonymous U.S. military official: " 'Iraqi army soldiers and U.S. forces have begun clear-and-hold operations in the city of Karabilah near Husaybah town, close to the Syrian border,' said a military official once operations began."

Another storyboard, written on the same date, describes the capture of an insurgent bomb-maker in Baghdad. "As the people and the [Iraqi security forces] work together, Iraq will finally drive terrorism out of Iraq for good," it concludes.

It was unclear whether those two storyboards have made their way into Iraqi newspapers.

A debate over the Pentagon's handling of information has raged since shortly after the Sept. 11 attacks.

In 2002, the Pentagon was forced to shut down its Office of Strategic Influence, which had been created the previous year, after reports surfaced that it intended to plant false news stories in the international media.

For much of 2005, a Defense Department working group has been trying to forge a policy about the proper role of information operations in wartime. Pentagon officials say the group has yet to resolve the often-contentious debate in the department about the boundaries between military public affairs and information operations.

Lincoln Group, formerly known as Iraqex, is one of several companies hired by the U.S. military to carry out "strategic communications" in countries where large numbers of U.S. troops are based.

Some of Lincoln Group's work in Iraq is very public, such as an animated public service campaign on Iraqi television that spotlights the Iraqi civilians killed by roadside bombs planted by insurgents.

Besides its contract with the military in Iraq, Lincoln Group this year won a major contract with U.S. Special Operations Command, based in Tampa, to develop a strategic communications campaign in concert with special operations troops stationed around the globe. The contract is worth up to $100 million over five years, although U.S. military officials said they doubted the Pentagon would spend the full amount of the contract.

At 40 pounds it is no lightweight. Hopefully it is reconditioned
surplus or very cheap unrecondtioned surplus.

How much are they asking.

Does anyone have the assembly and alignment manuals for the Knight Kit Star
Roamer II and the R195 receiver. These solid state receivers are of 1970's
vintage. Good clean copies and or clear scans would be appreciated.

5122. (OT) Foolish War.

Newsgroup: rec.radio.shortwave
Date: 2005-11-30 20:34:43 UTC
From: Oklahoma Joe <ok-no-spam@okie.net>
Message-ID: <438E0CD7.1E70DC2C@okie.net>
Source record: 52072

After what has been described as the most foolish war in
over 2,000 years, is there a way out of Iraq for
President Bush?

Brian Whitaker, The Guardian

There is a remarkable article in the latest issue
of the American weekly,
Forward. It calls for President Bush to be
impeached and put on trial "for misleading
the American people, and launching the most foolish
war since Emperor Augustus in
9 BC sent his legions into Germany and lost them".

To describe Iraq as the most foolish war of the
last 2,014 years is a sweeping
statement, but the writer is well qualified to
know.

He is Martin van Creveld, a professor at the Hebrew
University in Jerusalem and
one of the world's foremost military historians.
Several of his books have influenced
modern military theory and he is the only
non-American author on the US Army's list
of required reading for officers.

Professor van Creveld has previously drawn
parallels between Iraq and Vietnam,
and pointed out that almost all countries that have
tried to fight similar wars during
the last 60 years or so have ended up losing. Why
President Bush "nevertheless
decided to go to war escapes me and will no doubt
preoccupy historians to come,"
he told one interviewer.

The professor's puzzlement is understandable. More
than two years after the war
began, and despite the huge financial and human
cost, it is difficult to see any real
benefits.

The weapons of mass destruction that provided the
excuse for the invasion turned
out not to exist and the idea that Iraq could

become a beacon of democracy for the
Middle East has proved equally far-fetched.

True, there is now a multi-party electoral system,
but it has institutionalised and
consolidated the country's ethnic, sectarian and
tribal divisions - exactly the sort of
thing that should be avoided when attempting to
democratise.

In the absence of anything more positive, Tony
Blair has fallen back on the claim that
at least we're better off now without Saddam
Hussein. That, too, sounds increasingly
hollow.

The fall of Saddam has brought the rise of Zarqawi
and his ilk, levels of corruption in
Iraq seem as bad as ever, and at the weekend former
prime minister Iyad Allawi
caused a stir by asserting that the human rights
are no better protected now than
under the rule of Saddam.

Noting that some two-thirds of Americans believe
the war was a mistake, van
Creveld says in his article that the US should
forget about saving face and pull its
troops out: "What had to come, has come. The
question is no longer if American
forces will be withdrawn, but how soon - and at
what cost."

Welcome as a pullout might be to many Americans, it
would be a hugely complex
operation. Van Creveld says it would probably take
several months and result in
sizeable casualties. More significantly, though, it
would not end the conflict.

"As the pullout proceeds," he warns, "Iraq almost
certainly will sink into an all-out
civil war from which it will take the country a
long time to emerge - if, indeed, it can
do so at all. All this is inevitable and will take
place whether George W Bush, Dick
Cheney, Donald Rumsfeld and Condoleezza Rice like
it or not."

This is one of the major differences between Iraq
and the withdrawal from Vietnam.
In Vietnam, it took place under a smokescreen of

"Vietnamisation" in which US
troops handed control to local forces in the south.

Of course, it was a fairly thin smokescreen; many
people were aware at the time that
these southern forces could not hold out and in due
course the North Vietnamese
overran the south, finally bringing the war to an
end.

Officially, a similar process is under way in Iraq,
with the Americans saying they will
eventually hand over to the new Iraqi army - though
the chances of that succeeding
look even bleaker than they did in Vietnam.

"The new Iraqi army is by all accounts much weaker,
less skilled, less cohesive and
less loyal to its government than even the South
Vietnamese army was," van Creveld
writes.

Worse still, in Iraq there is no equivalent of the
North Vietnamese regime poised to
take power. What will happen once the Americans
have gone is anyone's guess, but
a sudden outbreak of peace seems the remotest of
all the possibilities.

Not surprisingly, many who in principle would argue
that the Americans had no right
to invade Iraq in the first place are apprehensive
about what might happen once they
leave. The conference organised by the Arab League
in Cairo last week was one
example: it called for "the withdrawal of foreign
forces according to a timetable" but
didn't venture to suggest what that timetable might
be.

With or without American troops, the war in Iraq
has acquired a momentum of its
own and threatens to spill over into other parts of
the region.

There are four major issues: terrorism, Sunni-Shia
rivalries, Kurdish aspirations, and
the question of Iraq's territorial integrity - all
of which pose dangers internationally.

Back in July 2003, terrorism in Iraq seemed a
manageable problem and President
Bush boldly challenged the militants to "bring 'em

on". American forces, he said,
were "plenty tough" and would deal with anyone who
attacked them.

There were others in the US who talked of the
"flypaper theory" - an idea that
terrorists from around the world could be attracted
to Iraq and then eliminated.
Well, the first part of the flypaper theory seems
to work, but not the second.

As with the Afghan war in the 1980s that spawned
al-Qaida, there is every reason
to suppose that the Iraq war will create a new
generation of terrorists with expertise
that can be used to plague other parts of the world
for decades to come. The recent
hotel bombings in Jordan are one indication of the
way it's heading.

Contrary to American intentions, the war has also
greatly increased the influence of
Iran - a founder-member of Bush's "Axis of Evil" -
and opened up long-suppressed
rivalries between Sunni and Shia Muslims.

The impact of this cannot be confined to Iraq and
will eventually be felt in the oil-rich
Sunni Gulf states (including Saudi Arabia) that
have sizeable but marginalised Shia
communities.

Kurdish aspirations have been awakened too - which
has implications for Turkey,
Syria and Iran, especially if Iraq is eventually
dismembered.

With a fragile central government in Baghdad
constantly undermined by the activities
of militants and weakened by the conflicting
demands of Sunnis, Shias and Kurds,
the demise of Iraq as a nation-state sometime
during the next few years has become
a distinct possibility.

The effect of that on the regional power balance is
difficult to predict, but at the very
least it would bring a period of increased
instability.

No one can claim that any of this was unexpected.
The dangers had been foreseen
by numerous analysts and commentators long before

the war started but they were
ignored in Washington, mainly for ideological
reasons.

There were, of course, some in the neoconservative
lobby who foresaw it too and
thought it would be a good thing - shaking up the
entire Middle East in a wave of
"creative destruction".

The result is that even if the US tries to leave
Iraq now, in purely practical terms it is
unlikely to be able to do so.

Professor van Creveld's plan for withdrawal of
ground troops is not so much a
disengagement as a strategic readjustment.

An American military presence will still be needed
in the region, he says.

"Tehran is certain to emerge as the biggest winner
from the war ... Now that Iraq is
gone, it is hard to see how anybody except the
United States can keep the Gulf
states, and their oil, out of the mullahs'
clutches.

"A divided, chaotic, government-less Iraq is very
likely to become a hornets' nest.
From it, a hundred mini-Zarqawis will spread all
over the Middle East, conducting
acts of sabotage and seeking to overthrow
governments in Allah's name.

"The Gulf States apart, the most vulnerable country
is Jordan, as evidenced by the
recent attacks in Amman. However, Turkey, Egypt
and, to a lesser extent, Israel are
also likely to feel the impact. Some of these
countries, Jordan in particular, are going
to require American assistance."

As described in the article, van Creveld's plan
seems to imply that the US should
abandon Iraq to its fate and concentrate instead on
protecting American allies in the
region from adverse consequences.

A slightly different idea - pulling out ground
troops from Iraq but continuing to use
air power there - is already being considered in
Washington, according to Seymour

Hersh in the latest issue of the New Yorker
magazine.

The military are reportedly unhappy about this,
fearing it could make them
dependent on untrustworthy Iraqi forces for
pinpointing targets.

One military planner quoted by the magazine asked:
"Will the Iraqis call in air strikes
in order to snuff rivals, or other warlords, or to
snuff members of your own sect and
blame it on someone else?"

Focusing on air power has obvious political
attractions for the Bush administration,
since it is the safety of US ground troops that
American voters are most concerned
about.

But, again, that would not amount to a real
disengagement and would do little or
nothing to improve America's image in the region -
especially if reliance on air strikes
increased the number of civilian casualties.

The inescapable fact is that the processes Mr Bush
unleashed on March 20 2003
(and imagined he had ended with his "mission
accomplished" speech six weeks later)
will take a decade or more to run their course and
there is little that anyone, even the
US, can do now to halt them.

In his eagerness for regime change in Iraq, Mr Bush
blundered into a trap from
which in the short term there is no way out: the
Americans will be damned if they
stay and damned if they leave.

Possibly he is overlooking something, but three rather obvious reasons,
not necessarily in any order, come to mind...

* Oil

* A way to get bases and a foothold in a very strategic part of the world

* A nice little war is always a great way to boost a faltering economy

...but certainly not the utter baloney "reasons" of WMDs or "Gee, Saddam
isn't a very nice guy" (Is anybody keeping a tally? Has the shrub yet
killed as many innocent Iraqis as Saddam did---or just getting close?)

I do not know this for certain; if you can provide some proof, either
rmaterial, an eyewitness account or a conviction in a court of law, I
will accept it. Having said that -

Unless a human being is harmed by one of these groups, I do not
consider an organization "terrorist." Civilly disobedient, certainly.
Guilty of property destruction, yes, sometimes. Terrorist? *No,* as
long as no humans are physically. As far as property destruction goes,
I am not in favor of bombing car dealerships or people's homes.

If, however, you consider it a terrorist organization despite lack of
human injury or death, then count me among the terrorists. Animals are
terrorized, abused, vivisected, cruelly beaten and murdered every day
in thousands of ways and circumstances, at the hands of humans who have
no special claim to any right to do so. I feel little sympathy for a
person whose pertinent property is destroyed when he or she shamelessly
abuses and tortures pain-feeling creatures on a business-as-usual
basis. This is fascism, true blue unadulterated fascism by definition
at its terrifying worst, and the animals have no voice, no vote, no
recourse whatsoever - except by those who stick up for them.

I am solidly in favor of working to educate and legislate compassion
and rights for animals. When this fails, as it so often does in the
ethically corrupt human political world, then it is fair to fight fire
with fire - so long as no human is physically harmed. Yes, I believe
that, and make no apology whatsoever. I know in my heart that the
sanctity of material possessions cannot compare with the sanctity of a
living creature's freedom from abuse.

There are various related issues, and I will be happy to discuss them
in private, not on this messy forum.

Subject: Dave Munroe Scammer of Ontario Canada back at it!!!
Reply to Author | Forward | Print | Individual Message | Show original | Remove | Report Abuse

If your contacted by this guy or see a post from "homesteaders2...@yahoo.com" or "Homesteaders2...@yahoo.com" don't deal with him!!! He had a low profile for a while, but he's back at the scamming.

Most Current info is:

Dave Munroe (doubt if that's real)
220 Paudash Road (doesn't show up on Yahoo Maps)
Hiawatha, Ontario, Canada K0L-2G0 (Again, the city of Hiawatha doesn't show on Yahoo, and this is a new city compared to his old city of Keene)
Cell phone (yeah right) is 705-313-1518

Mail is beginning to bounce to the lower case homesteaders2...@yahoo.com. My most recent email from him was dated in mid-May in which he claimed that the mail is slow.

He currently has several ID's still active on Ebay of "leanna2000", "-pokey-", "Quake99" and "Invest7". All have 0 feedback's but ebay only goes back 30 days for history now. So information is skimpy.

Well, RHF, your XM radio stuff is easily less than .00001% of the off-topic content in this newsgroup.... so I think we should be able to handle it (although speaking for myself, I'm a Sirius subscriber). Your contributions to this newsgroup are much appreciated!

The vast majority of the off topic content in rec.radio.shortwave is, of course, the half-witted political ranting and active bouts of name-calling. and, this being an open and unmoderated group, we endure that, too!

For a truly on-topic newsgroup, try alt.tv.commercials

Junius

Here's a story most newspapers buried, if they ran it at all:

Bosnia's three key ethnic/political groups (Muslims, Serbs and Croats)
have all agreed to unify their nation and end the tripartite government
bequeathed them by the Dayton peace accords negotiated in 1995 after a heavy
round of American bombing.

No longer were racial hatreds so deep that these three factions needed to
stay away from one another. Now the desire to centralize to join Europe and
grow economically has overcome the animosities that led to 250,000 deaths in
the early 1990s.

Should we expect a similar article 10 years hence - about Iraq?

As intense as the killing has been in Iraq, with 30,000 civilian and 2,000
U.S. military deaths, it doesn't come close to Bosnia's quarter-million
genocide. But constitution-making, nation-building and planting the seeds of
democracy have still worked in Bosnia.
...
Impeached Clinton was right to invest in "nation-building" after U.S.
military action in Bosnia and 2000 presidential candidate George W. Bush was
wrong to criticize him for it. And now President Bush is right to push
nation-building in Iraq, while Impeached Clinton is wrong to criticize the
military action as a "huge mistake."
...
Now Impeached Clinton fails to see how Bush's policies in Iraq will succeed
just as his did in Bosnia. But his partisan myopia should not cloud our
vision. Success in Iraq may seem as unlikely as it once did in Bosnia. But,
if we persevere, it will come just as surely.
